

Digital perspective on JICA's waste management program

Feb 2023

Mayumi MIYATA, Senior Director, Office for Science Technology Innovation and Digital Transformation, JICA

Today's topics

1. JICA DX Vision & Role
2. Mapping potential digital solutions for a waste management value chain
3. Promoting development scenarios utilizing digital solutions & KPI acquisition/management
4. Digital architecture for utilizing digital solutions
5. Examples of digital solutions

Key Message

- By utilizing digital solutions, it is possible to establish the first stage of waste management flow and promote development scenarios in developing countries (applicable digital solutions already exist and can be used)
- By combining digital solutions and accumulating, managing, and utilizing the data obtained, more comprehensive impact can be made
- In order to realize the above, it is important to have an overall vision (digital architecture) that includes the infrastructure for data generation and utilization, and to encourage the development of a data sharing infrastructure in addition to the introduction of individual solutions
- Support using digital solutions cannot be provided solely by JICA, thus cooperation between the public and private sectors is essential

DX Vision to drive the achievement of JICA's Mission/Vision in a digital age we are facing.

JICA Mission & Vision

Leading the world with trust

Human Security

Fostering societies where people can protect themselves from various threats and lead their lives in security and with dignity

Quality Growth

Promoting sustainable growth with less disparity and without harming environment.

JICA DX Vision

Human Security

Diverse Well-being for All with Digital

Creating a quality digital society where everyone can realize diverse Well-being

Quality Growth

Quality Industrial & Societal Transformation with Digital

ODA Business Transformation

1 Data&Tech

Utilize data and technology to fullest for value creation

2 Co-Creation

Generate innovation and collective impact with digital partners

HR Transformation

4 Mindset

Change our mindset to be agile in a rapidly changing world

5 Digital HR

Reskill/Upskill ourselves on digital literacy and skillsets

Institutional Transformation

7 BPR

Reengineer efficient, effective business process/systems

8 Data-Driven

Realize data-driven institutional management

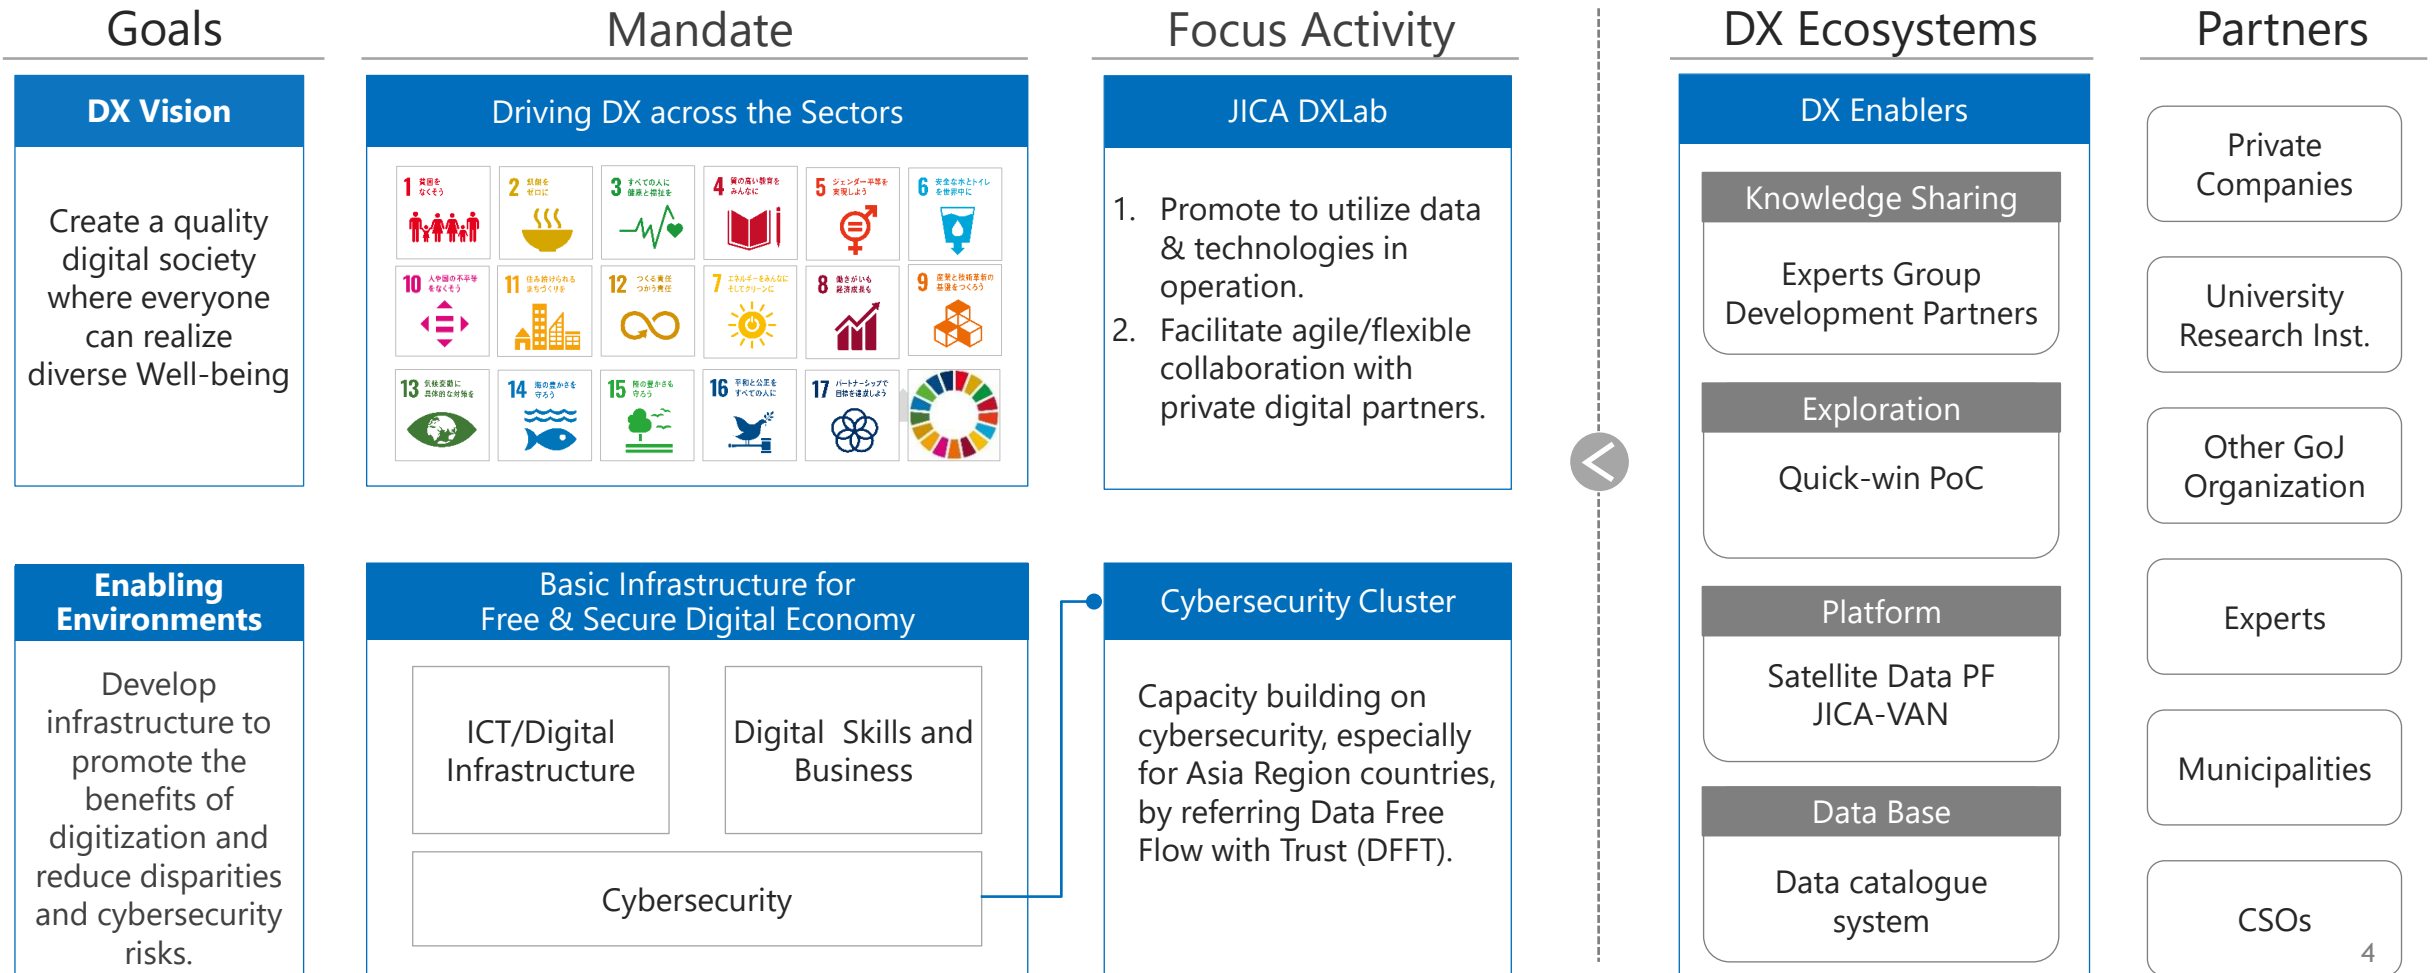

9 Digital Infra

Develop resilient, modern digital infrastructure

独立行政法人 国際協力機構 | Japan International Cooperation Agency

3

DX Team, as an internal advisory, spearheads the digital transformation initiative in cooperation with 20 Global Agenda (Thematic areas) and Regional Projects. STI/ICT team leads ICT Infrastructure development, cybersecurity, Digital Skills.

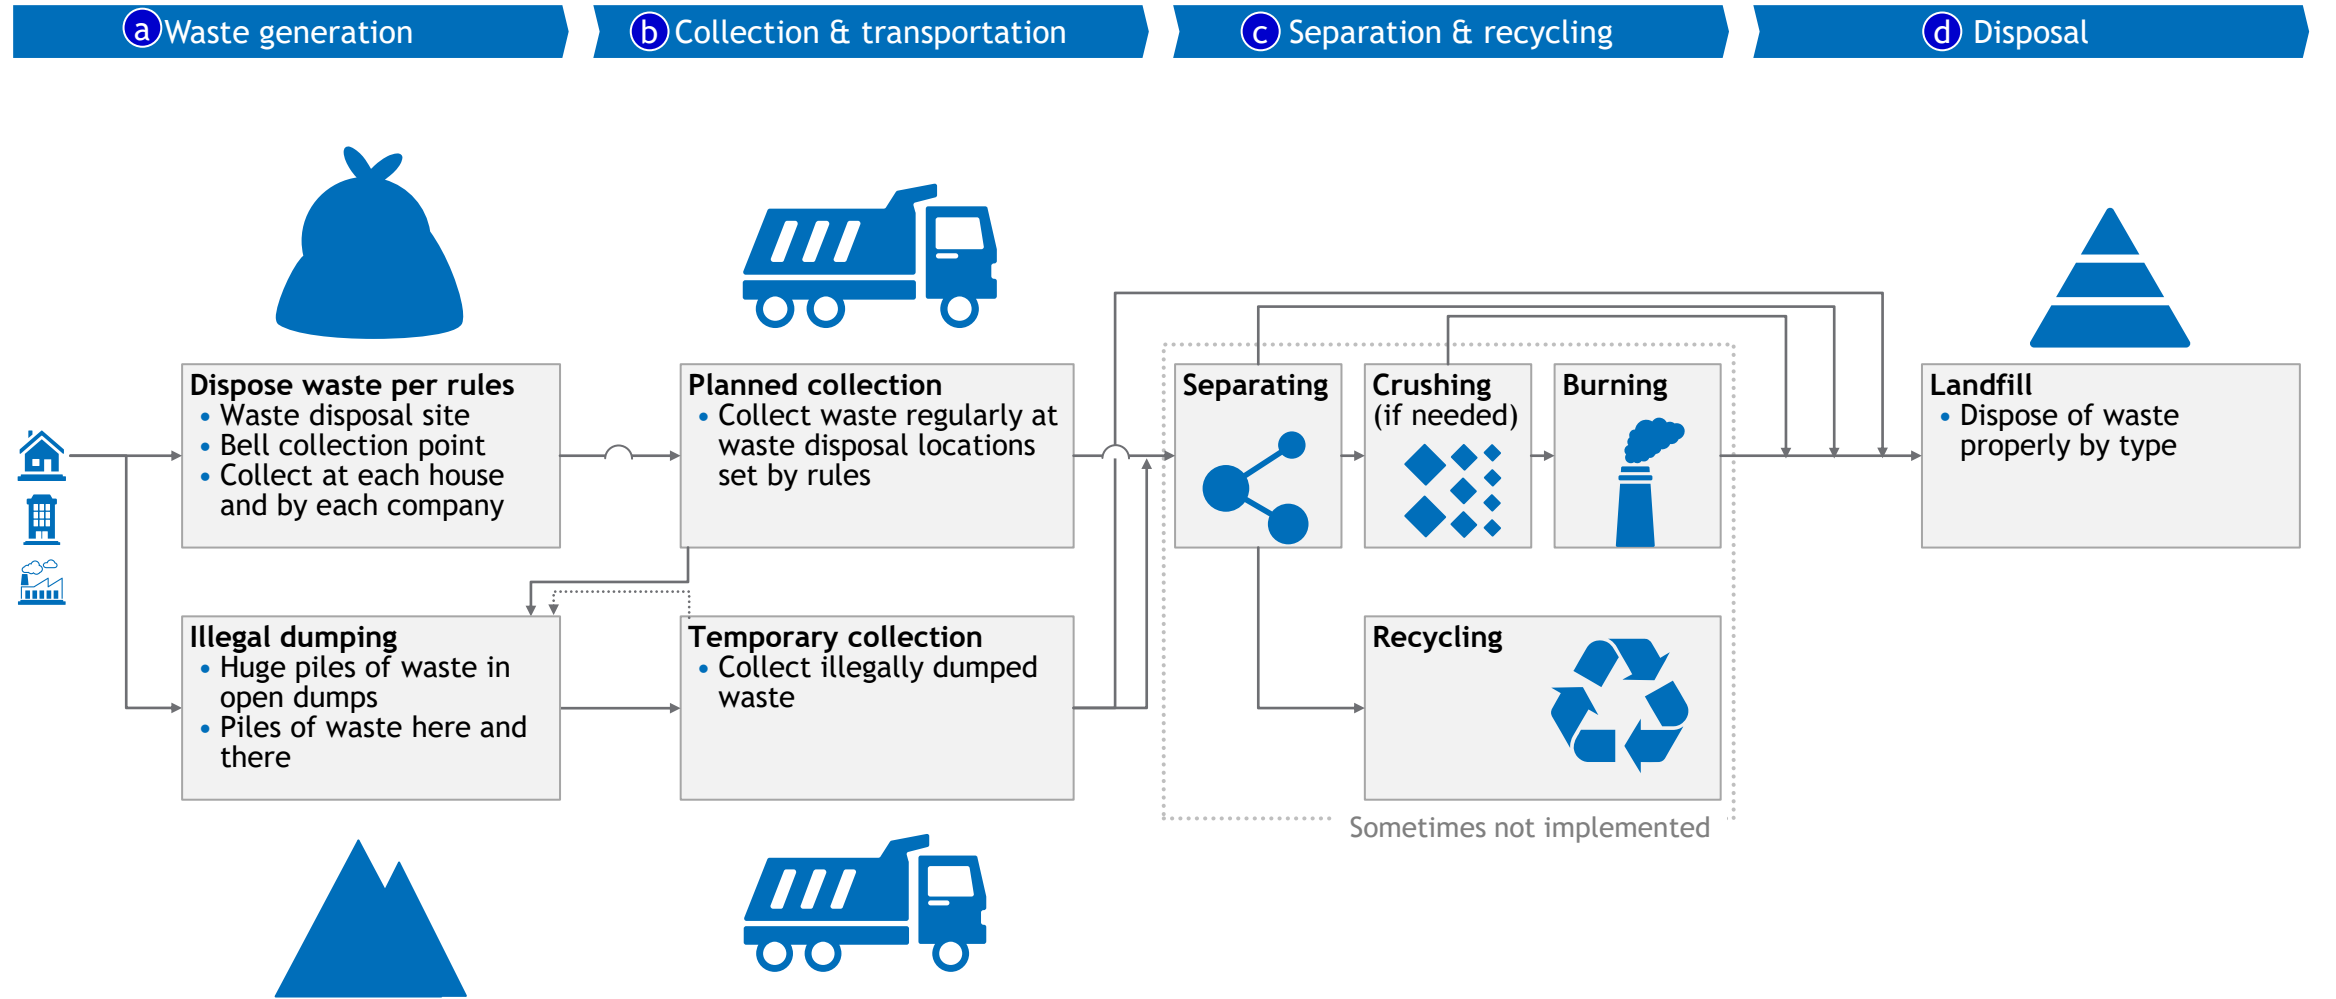

Today's topics

1. JICA DX Vision & Role
2. Mapping potential digital solutions for a waste management value chain
3. Promoting development scenarios utilizing digital solutions & KPI acquisition/management
4. Digital architecture for utilizing digital solutions
5. Examples of digital solutions

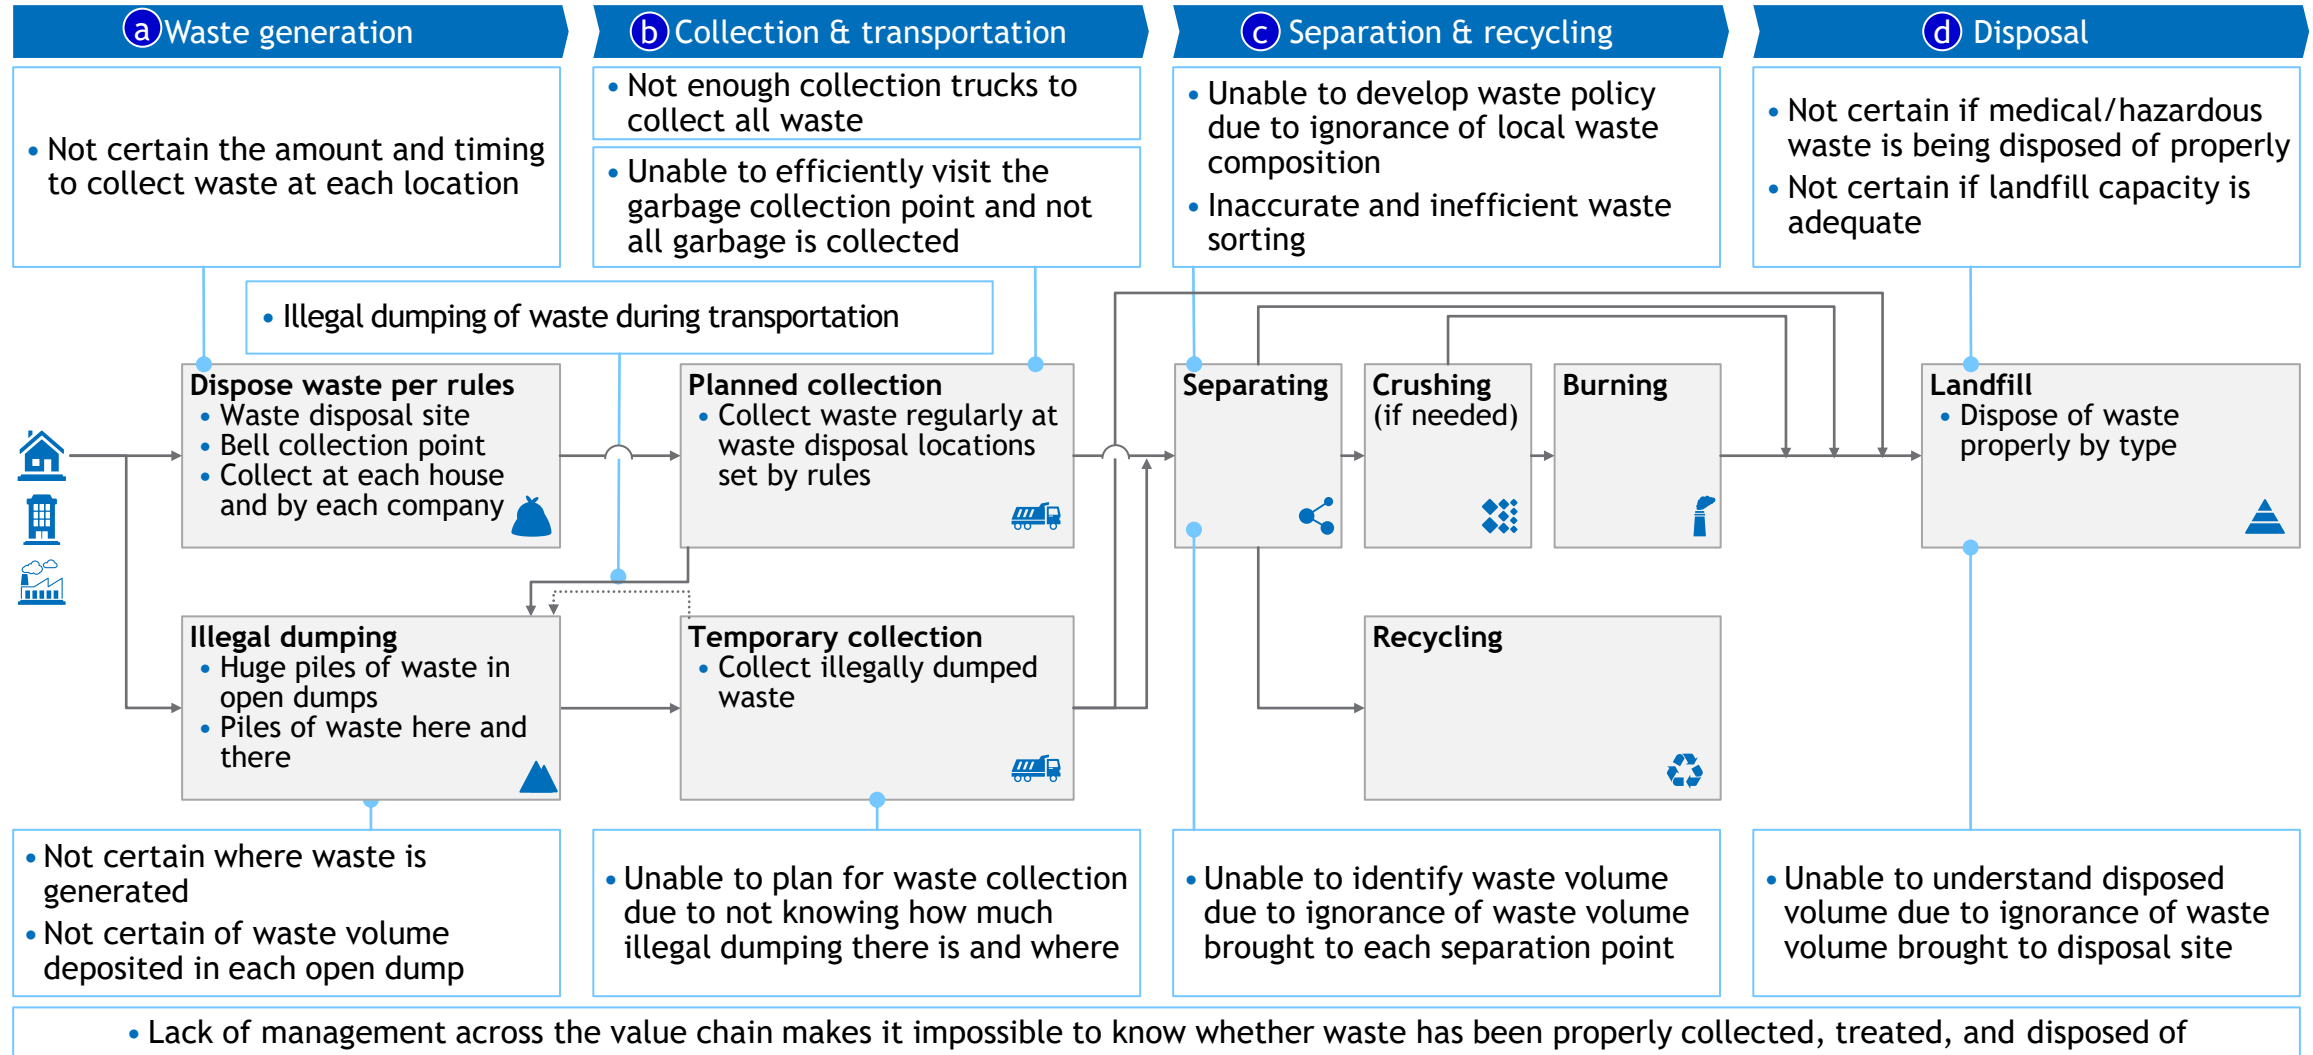

Overview of waste value chain

→ Waste flow

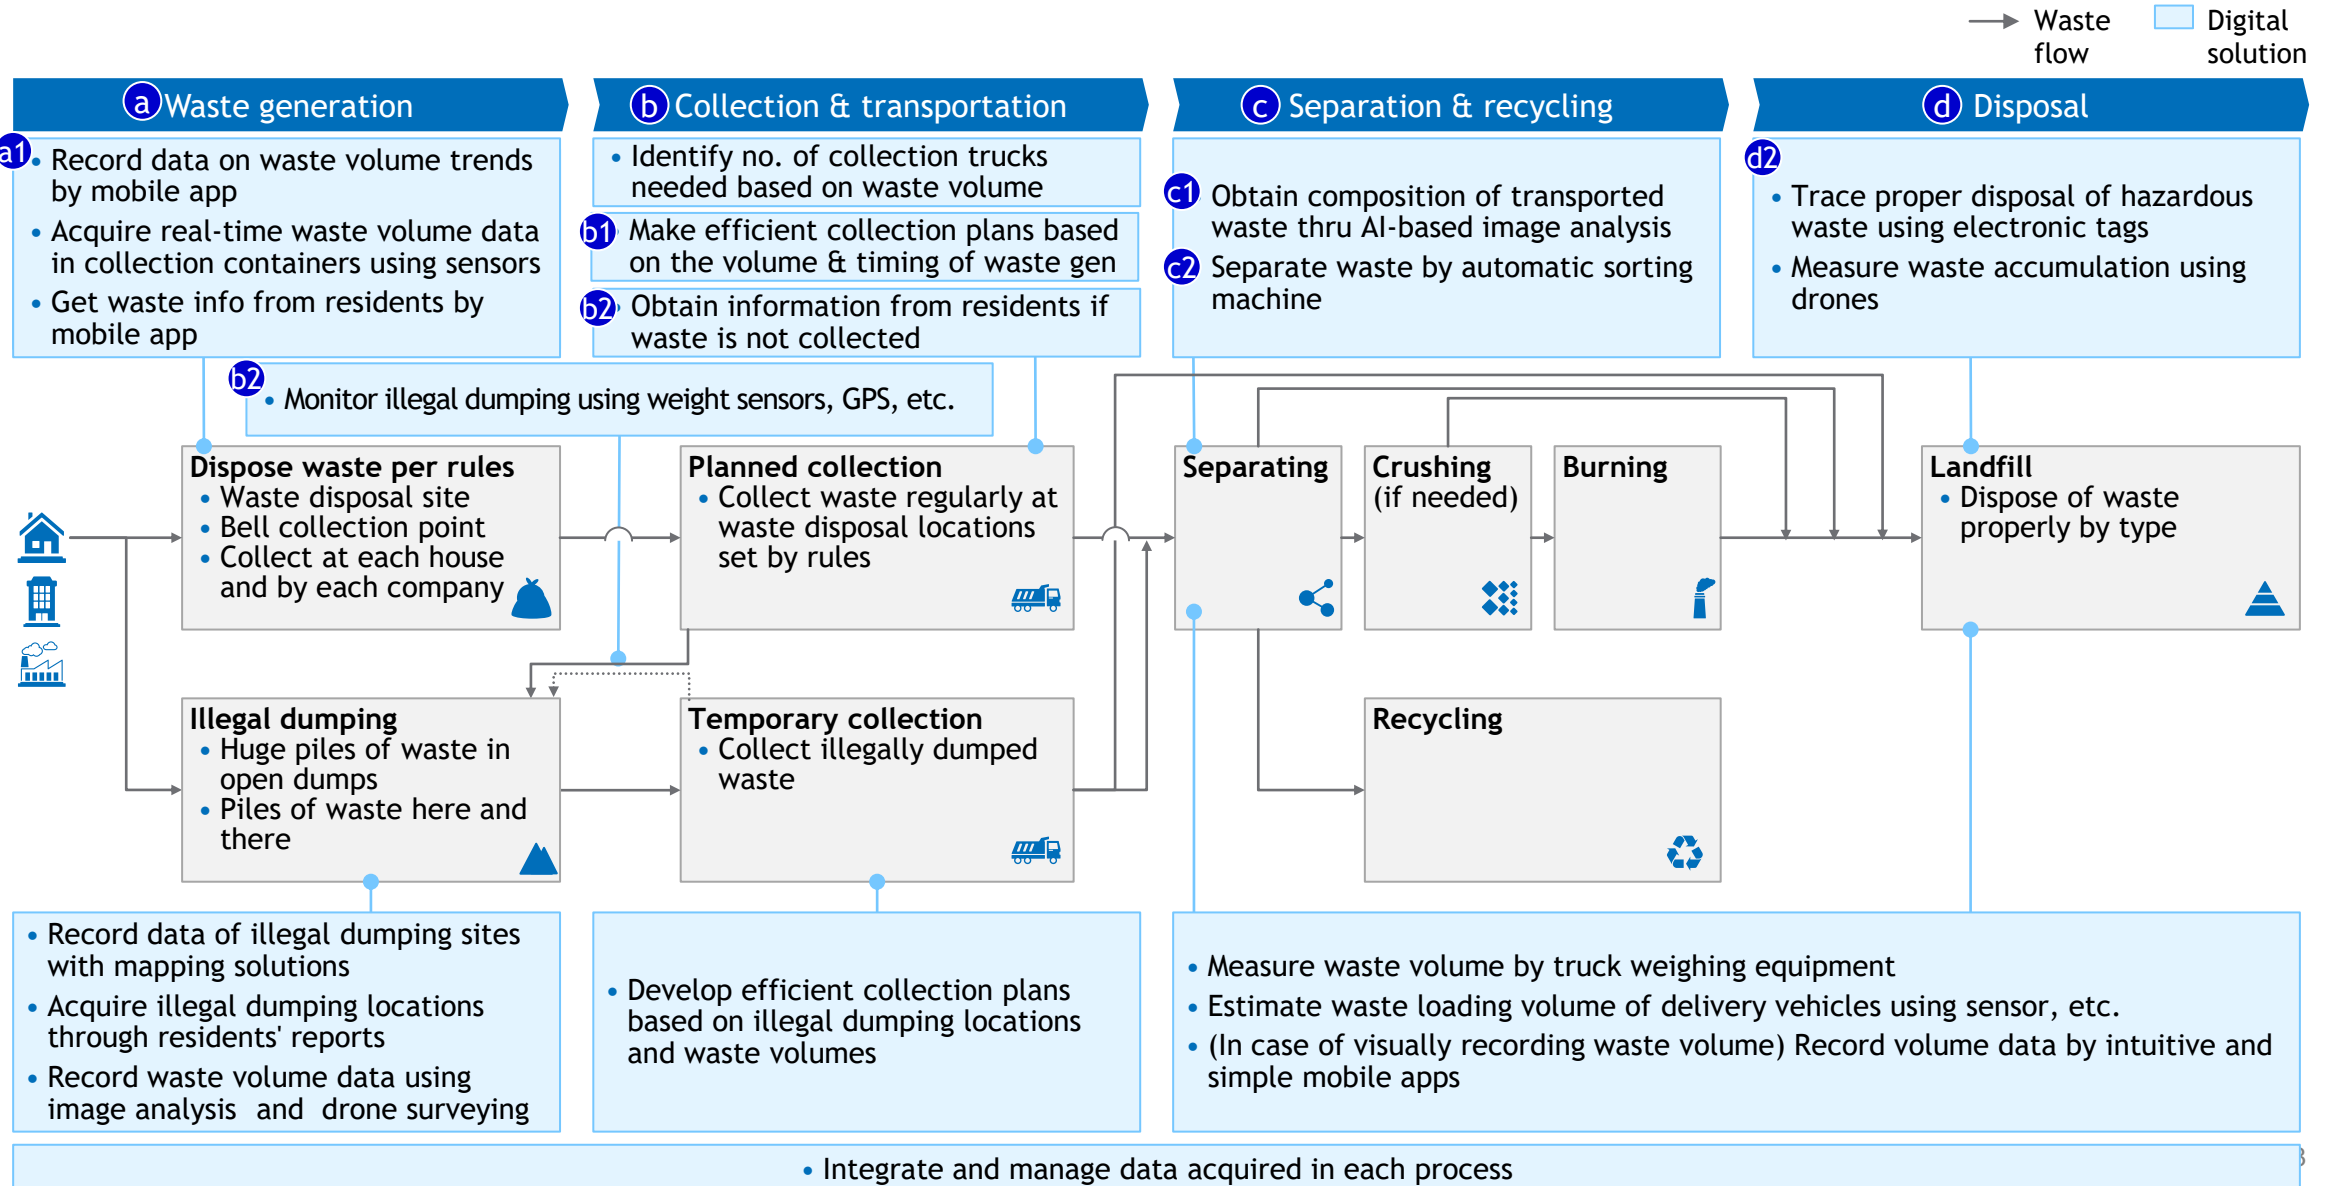

General issues in waste value chain

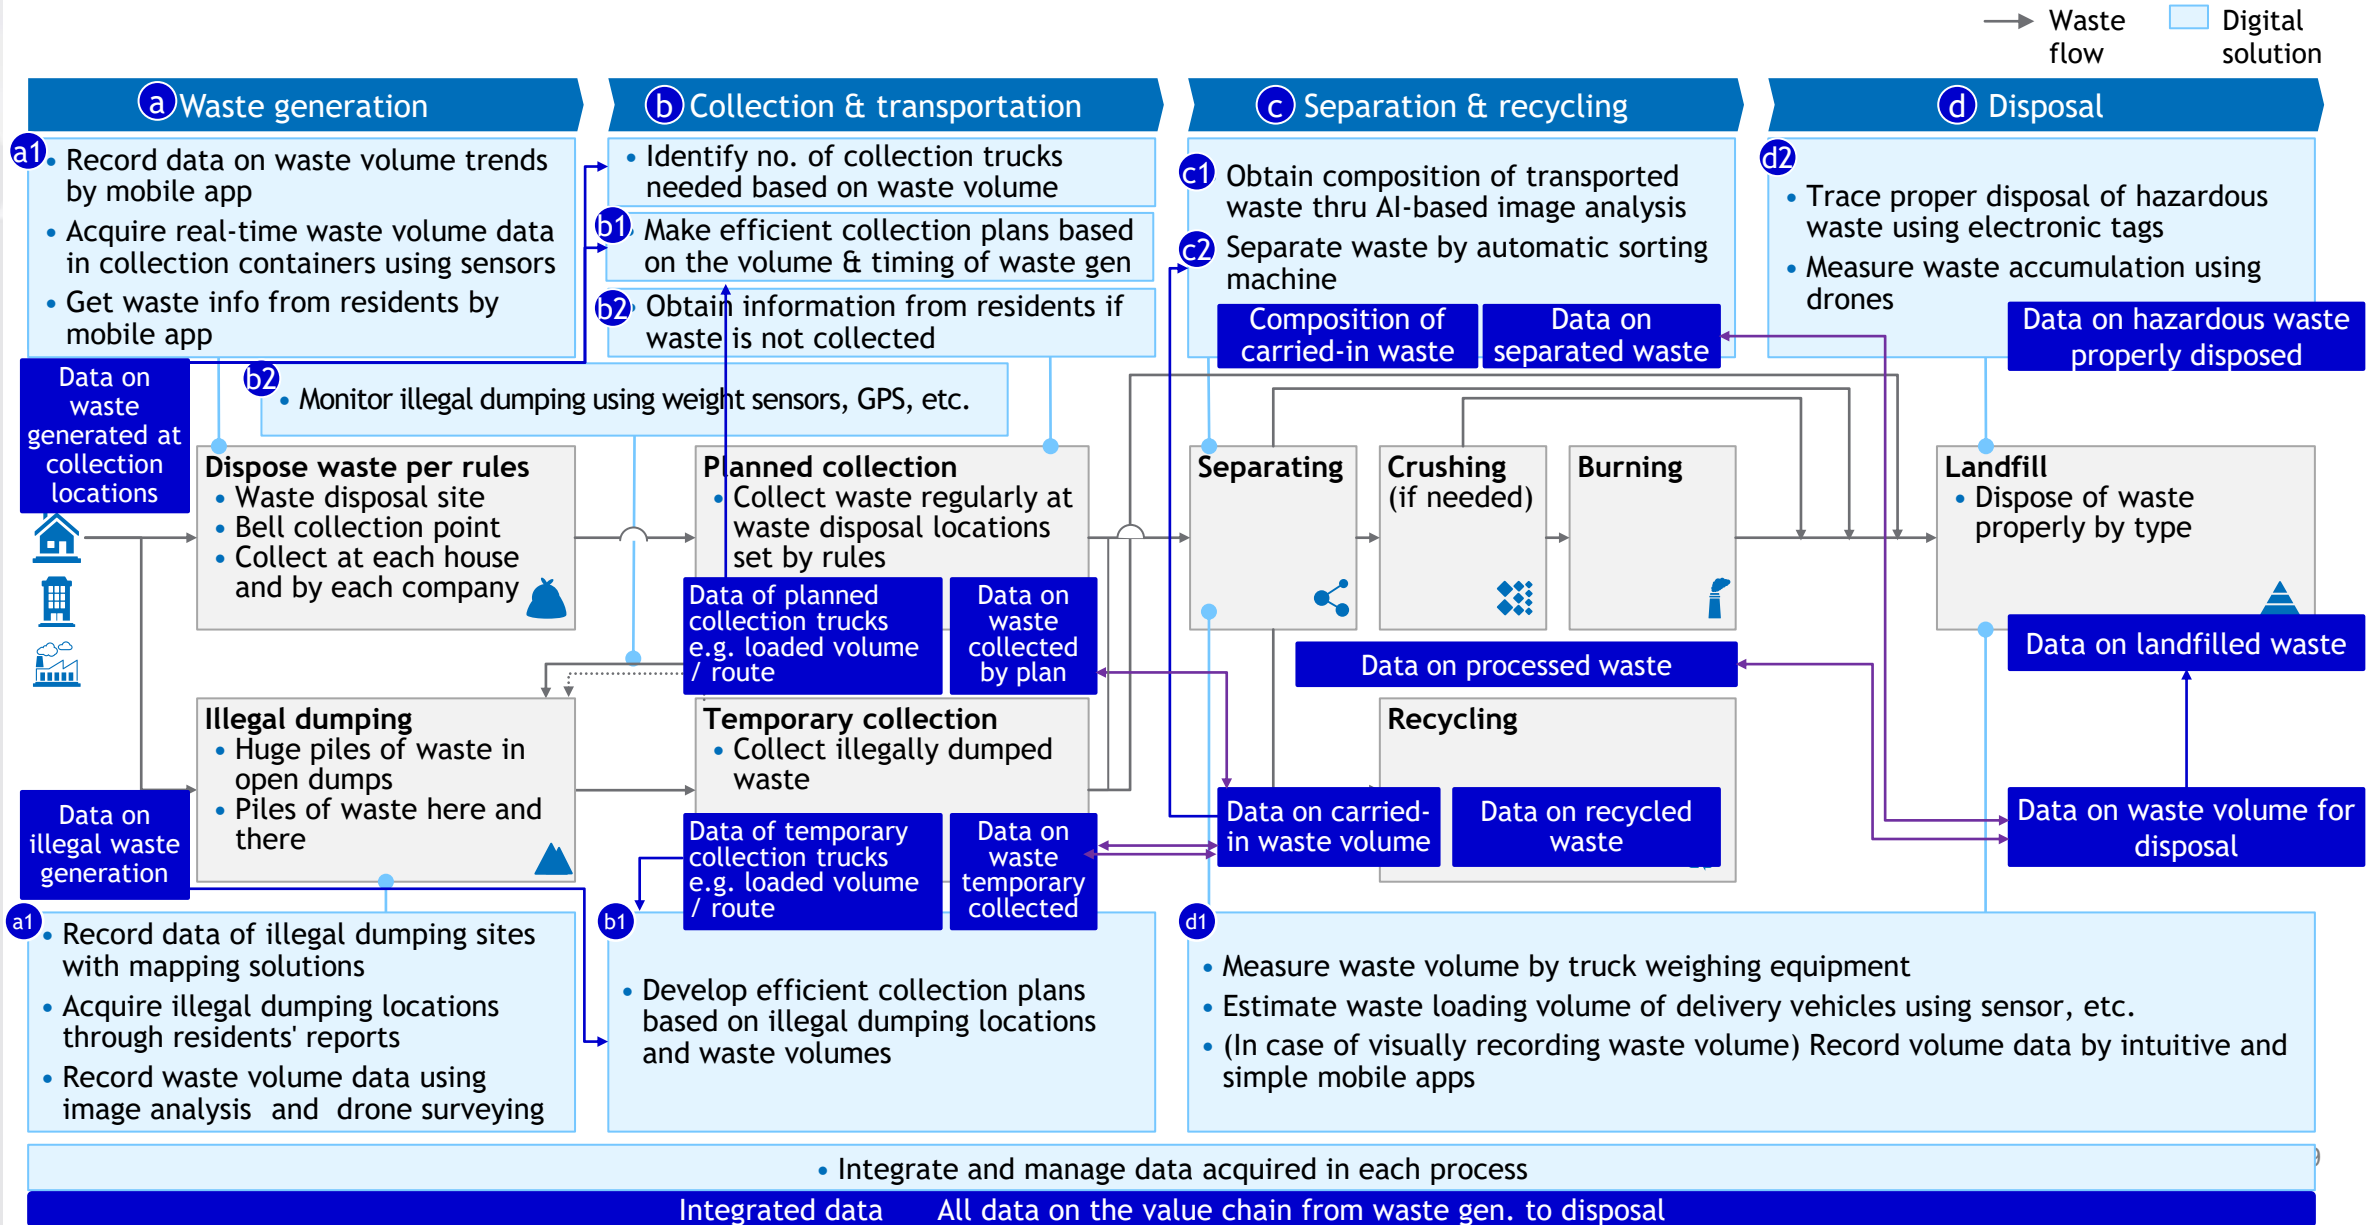

→ Waste flow □ Typical problems

General issues in waste value chain → Possible digital solutions

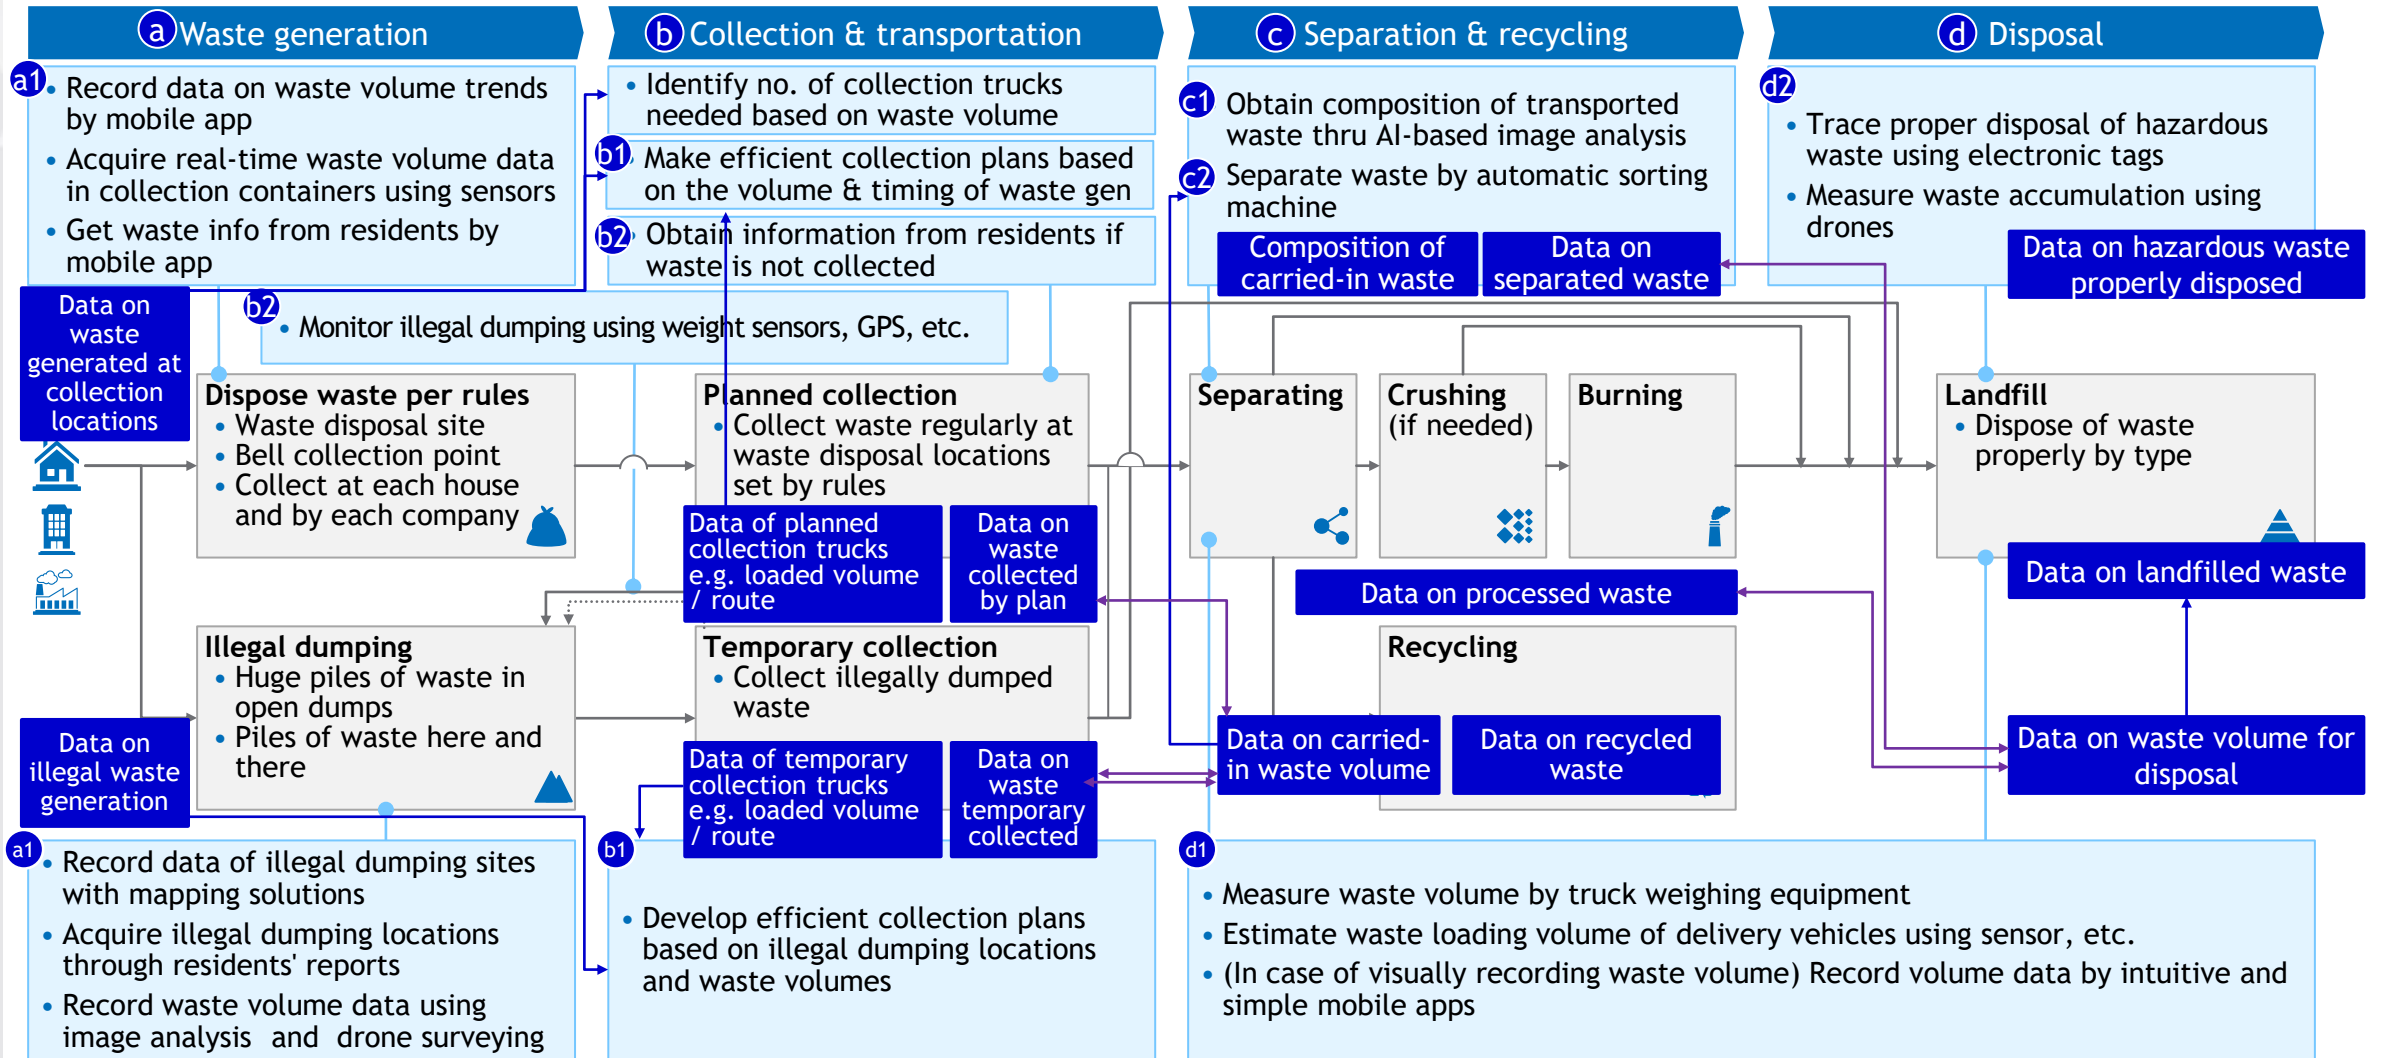

Possible digital solutions in waste value chain + Generation of data

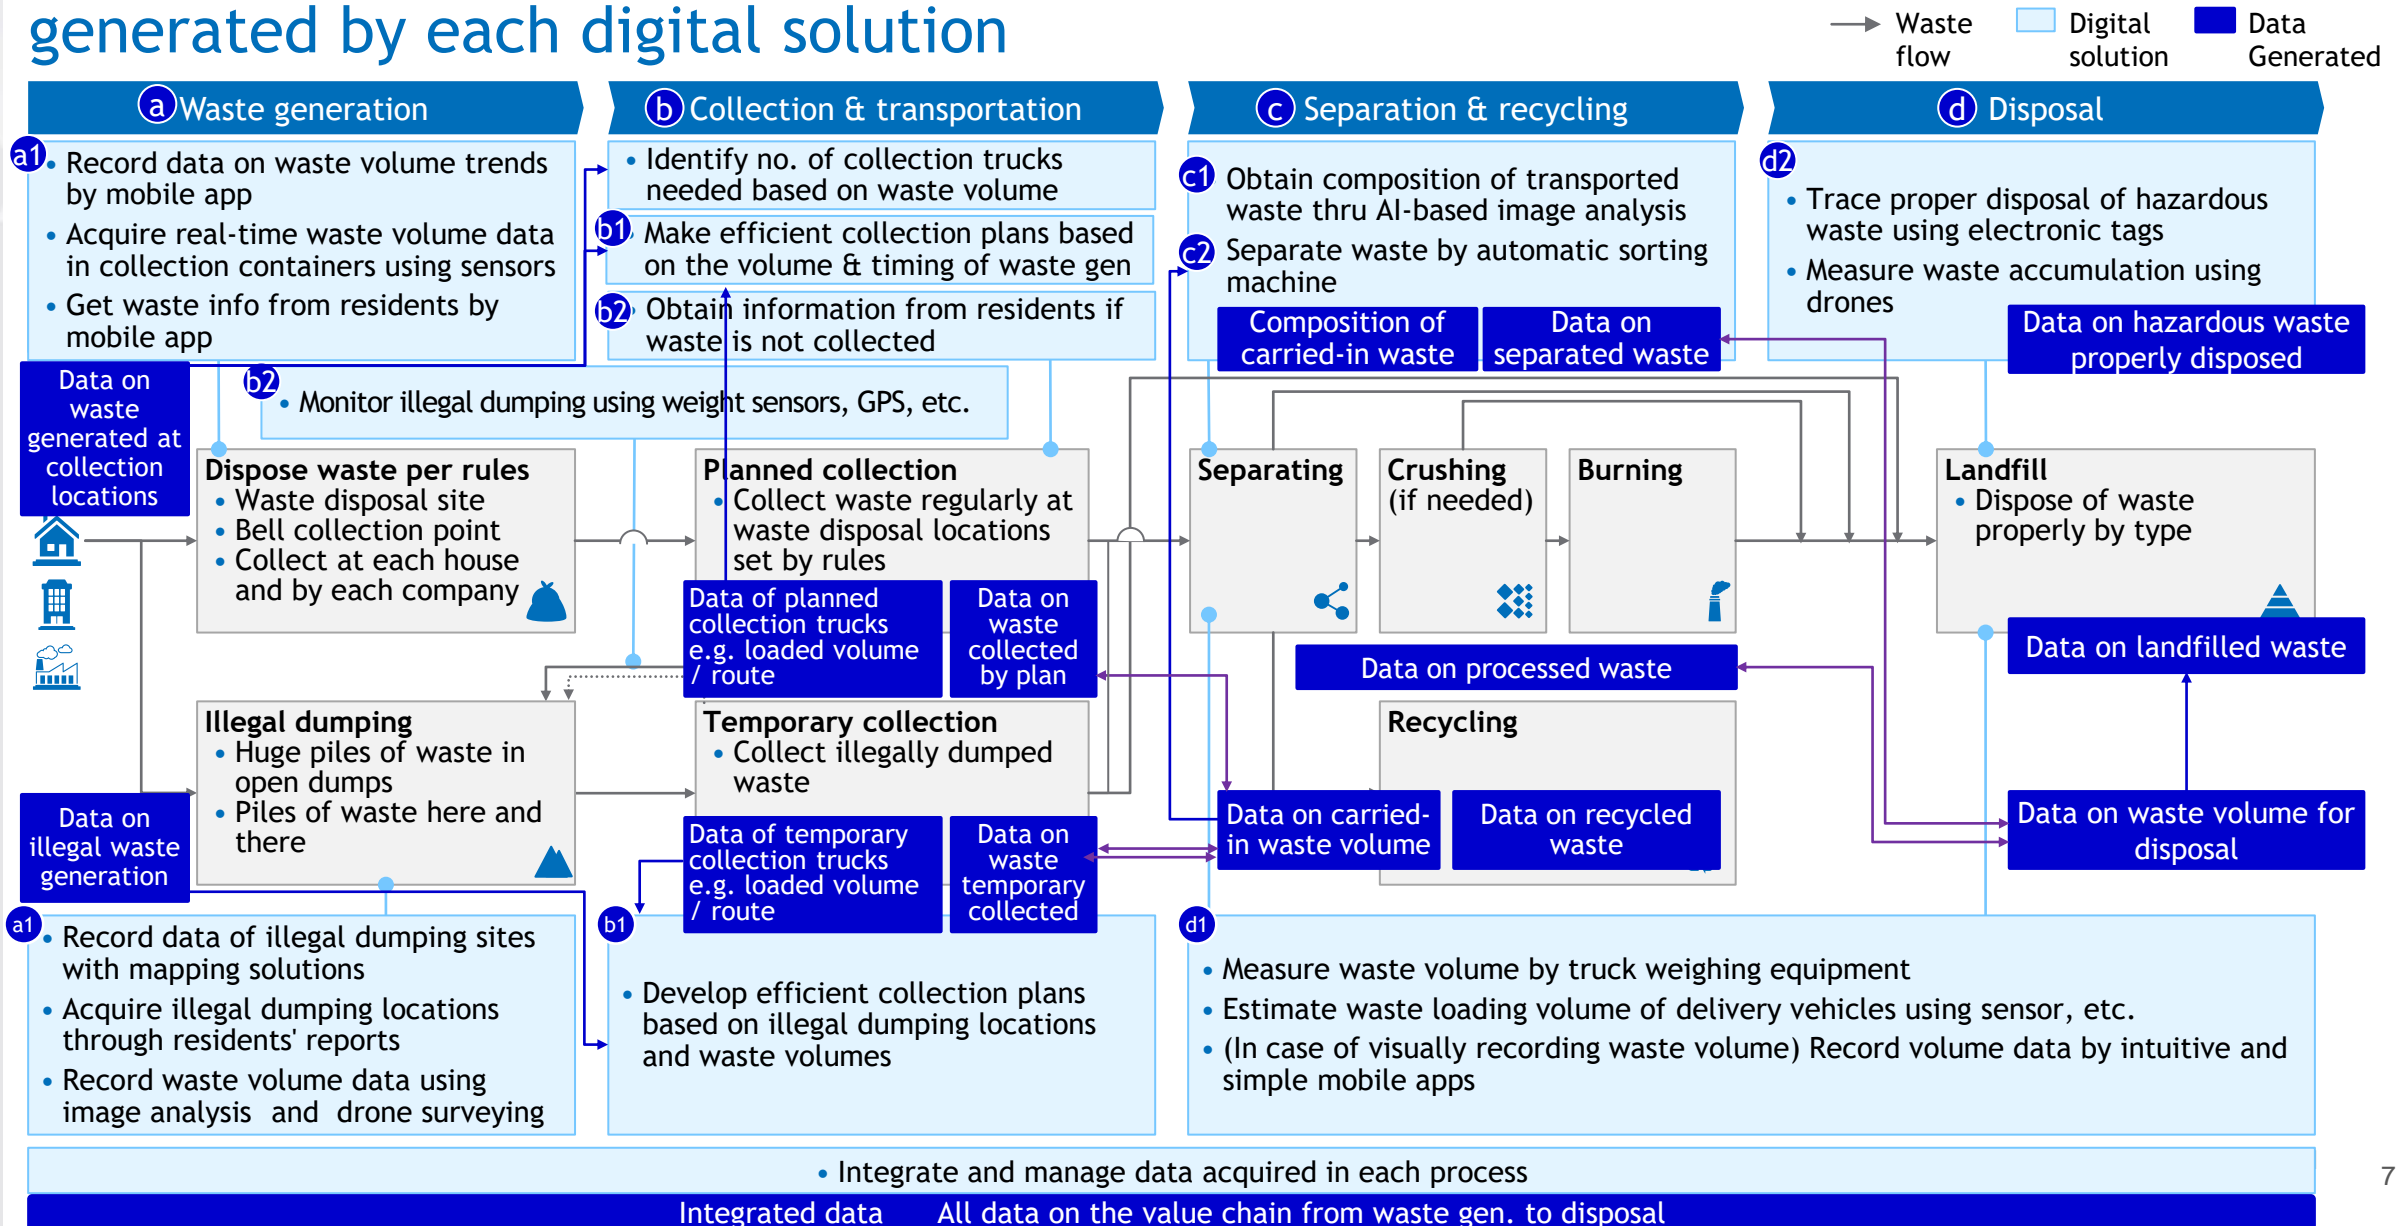

Establishing waste mgnt. flows is accelerated by organically linking data generated by each digital solution

→ Waste flow □ Digital solution ■ Data Generated

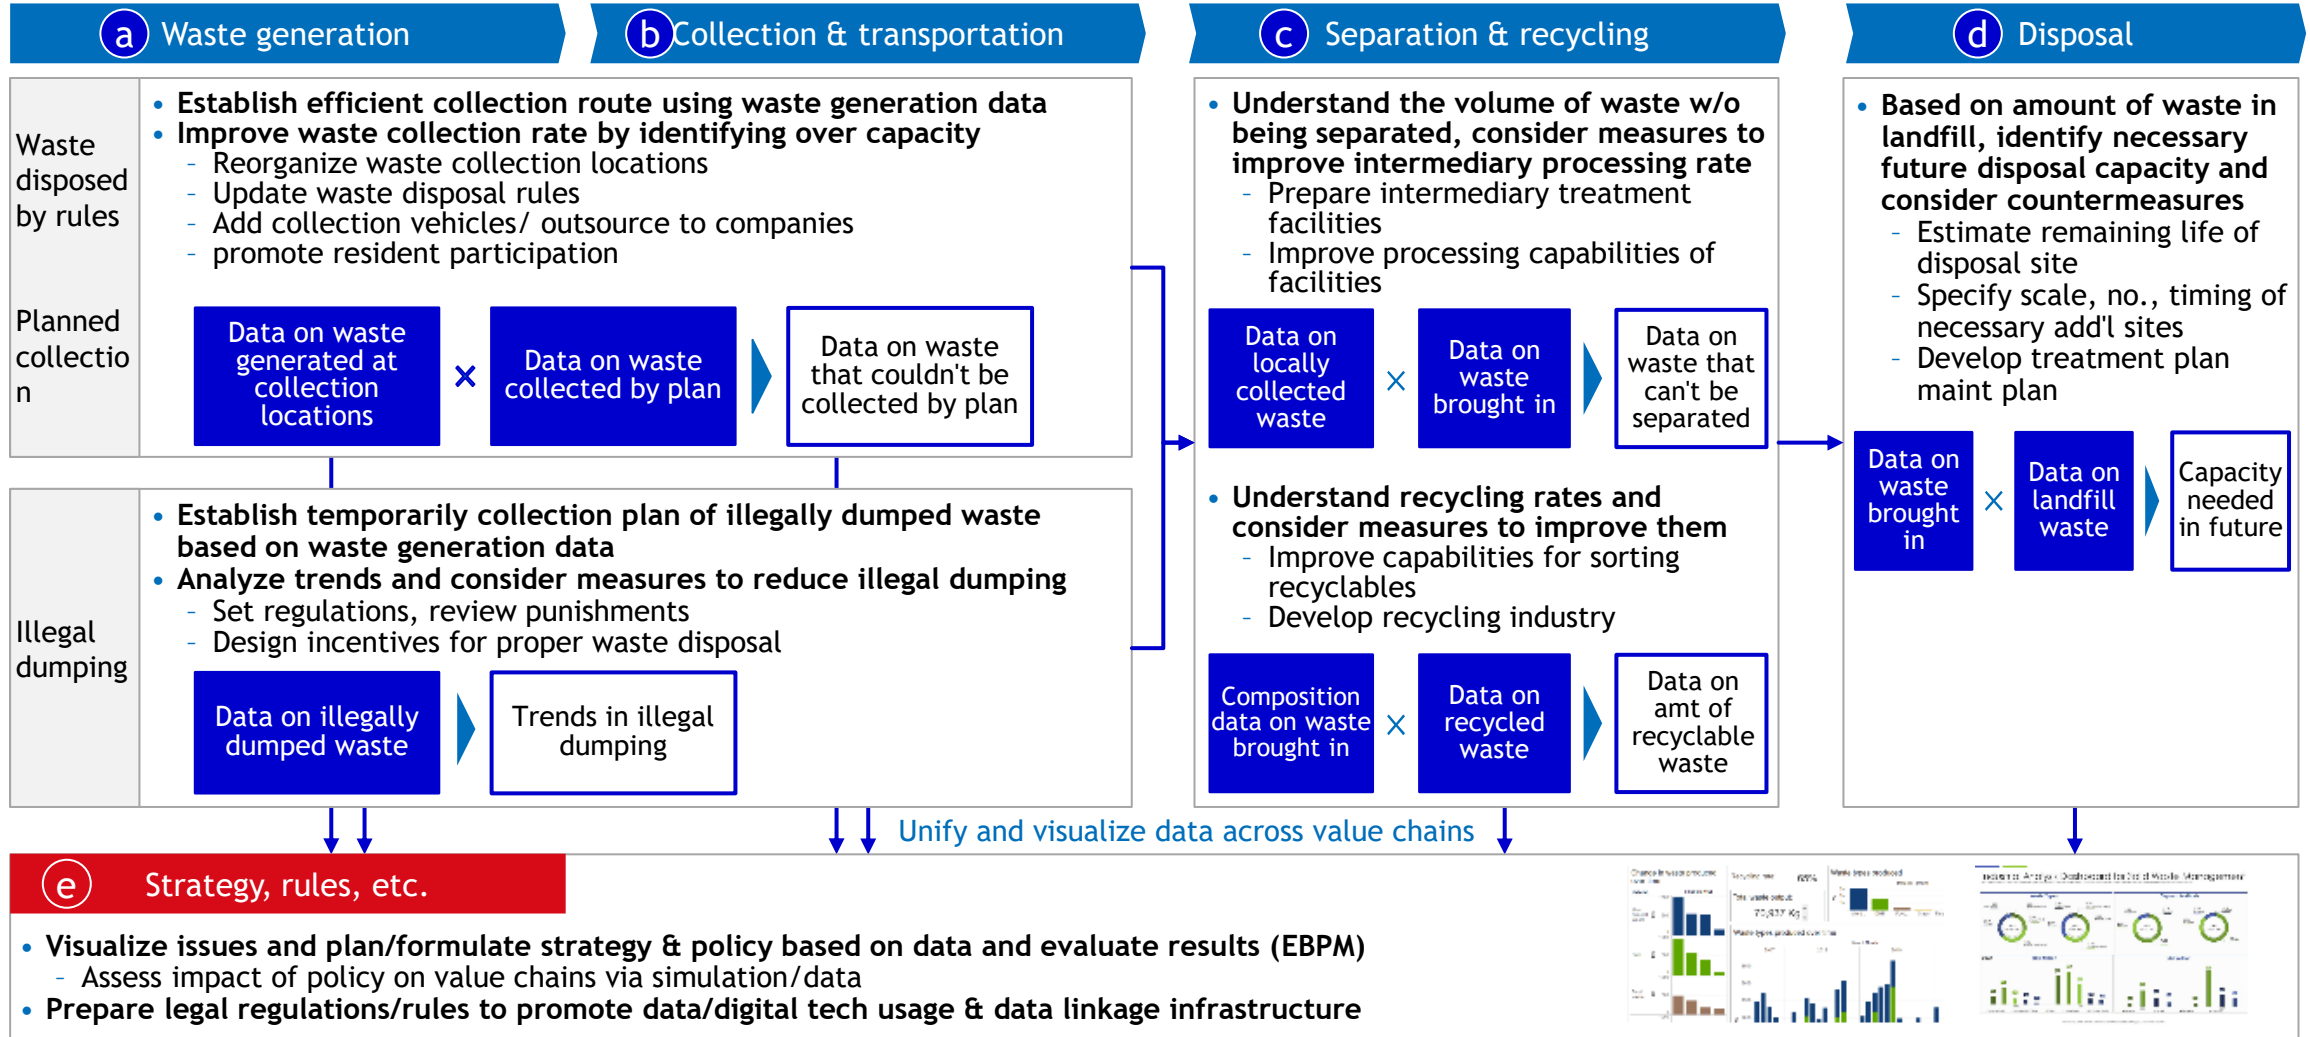

Establishing waste mgmt. flows is accelerated by organically linking data generated by each digital solution

Using data linked across value chains, rapidly determine measures based on urgency/ priority and evaluate/improve initiatives in the long-term

→ Data linkage Data generated by digital solutions

Today's topics

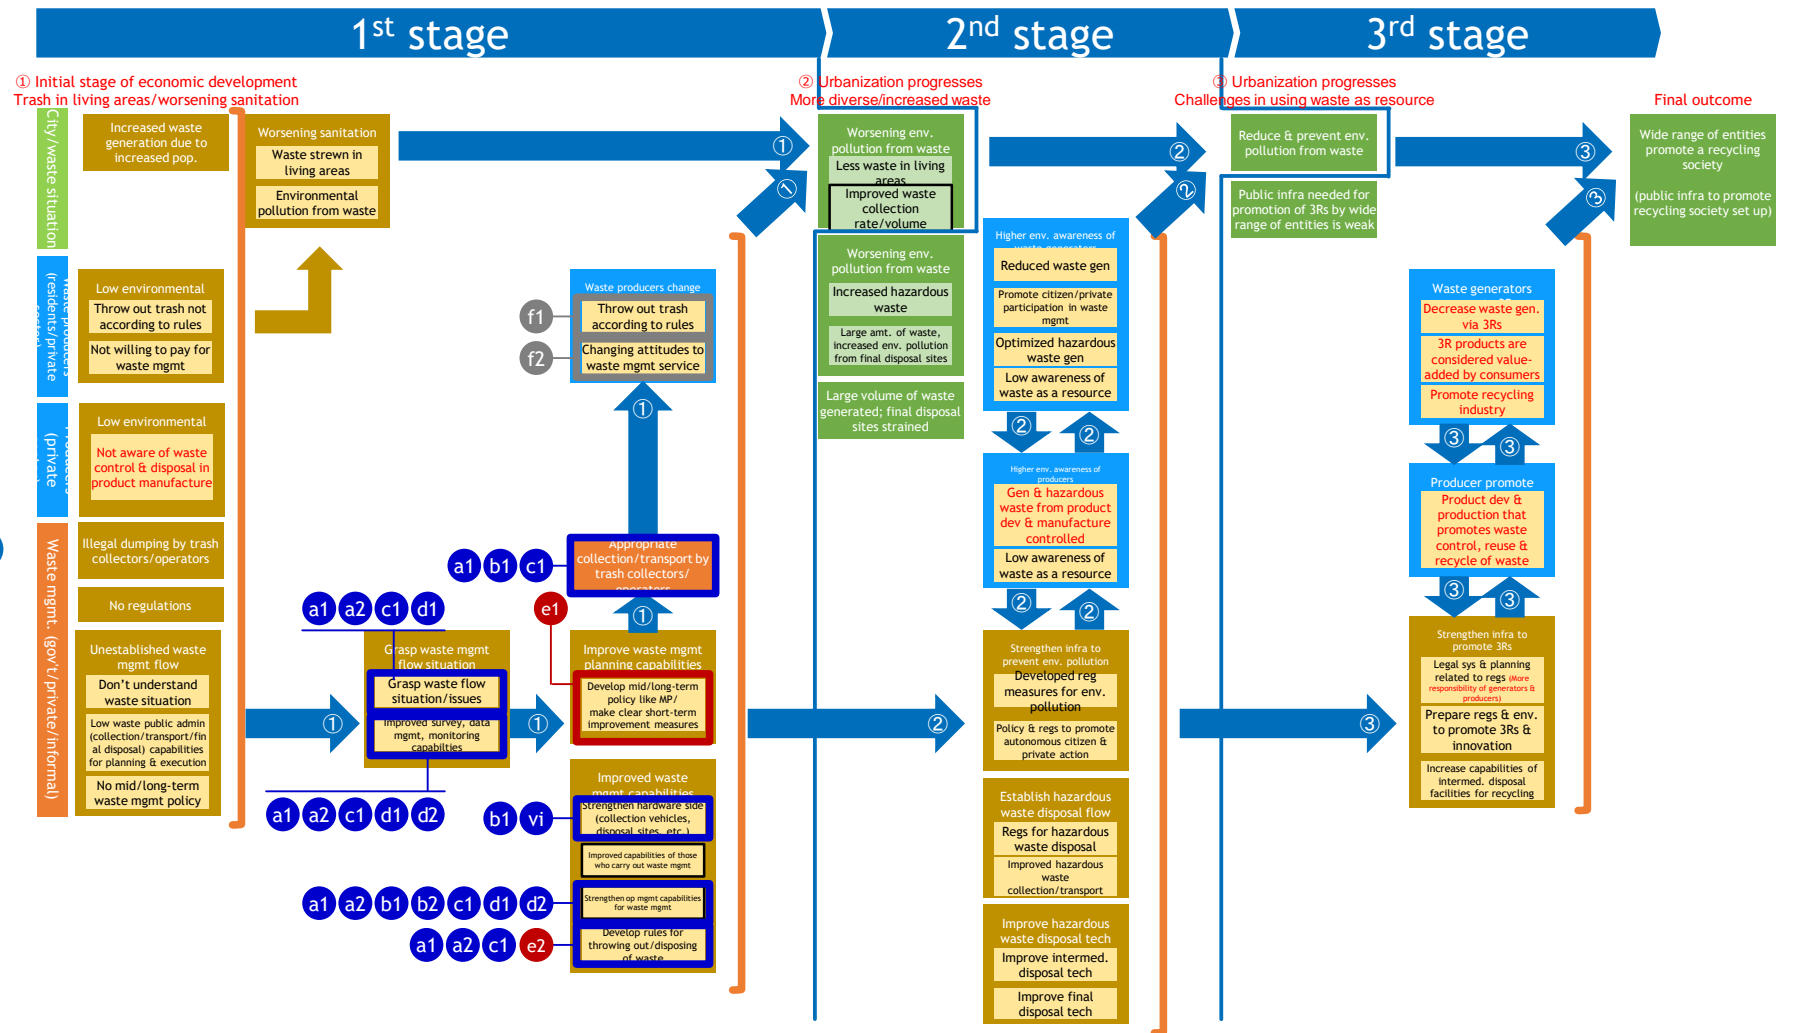

1. JICA DX Vision & Role
2. Mapping potential digital solutions for a waste management value chain
3. Plotting to the development scenarios utilizing digital solutions & KPI acquisition/management
4. Digital architecture for utilizing digital solutions
5. Examples of digital solutions

(Ref) Using digital solutions/data boosts helps promote development scenarios

Use of digital solutions/data

- a** Waste generation
 - a1 Understand local waste generation
 - a2 Understand amt. of plastic waste generated on coast
- b** Collection & transportation
 - b1 Understand waste collection timing & optimize collection routes
 - b2 Guarantee waste collection & transportation is carried out properly
- c** Separation & recycling
 - c1 Determine type of waste
 - c2 Optimize waste separation
- d** Disposal
 - d1 More efficiently understand volume of trash to be unloaded
 - d2 Trace disposal based on type of waste
- e** Strategy/rules
 - e1 Consider short-term reform measures, develop mid/long-term policy
 - e2 Reflect in rules
- f** Other
 - f1 Share info on rules about taking out trash
 - f2 Attitude surveys

Using digital solutions/data helps realize individual development scenario factors

(Ref) Using digital solutions/data also helps improve development scenario KPIs

KPI (from cluster business plan) ¹	Intermed. outcome measurement items	Direct outcome indicators	KPI components	Categories of digital solutions that could improve KPIs
Strengthen org capabilities of waste mgmt-related agencies (central, local gov't) in 40 cities by end of FY 2030	✓	✓	Digital Solution may not match for the KPI	N/A
Increase capabilities of 20k employees at waste mgmt-related agencies by end of FY 2030	✓	✓	Digital Solution may not match for the KPI	N/A
Waste collection service coverage or waste collection rates in 20 cities are over 80% by end of FY 2030 (1st stage :50%, 2nd stage: 50-80%, 3rd stage: 80%)	✓	✓	"Waste collection waste"(%)= A "Amt. of waste collected annually" / B "total amt. of waste generated annually"	A d1 More efficiently understand volume of trash to be unloaded B e1 Understand local waste generation e2 Understand amt. of plastic waste generated on coast
Develop short & mid/long-term policy/plan (1 st stage: No, 2 nd /3 rd stage: Yes)	✓		Digital Solution may not match for the KPI	e1 Consider short-term reform measures, develop mid/long-term policy
Introduce environmentally-friendly landfills (1 st stage: 50-80%, 2 nd stage: 80%)	✓		Digital Solution may not match for the KPI	e1 Consider short-term reform measures, develop mid/long-term policy
Achieve proper waste disposal rate of 50% by end of FY 2030	✓	✓	"Proper waste disposal rate"(%)=(C "amt of waste properly disposed and reused/recycled annually"+ D "amt of waste properly placed in sanitary landfills for final disposal")/ B "total waste generated annually"	C c1 Determine type of waste D d1 More efficiently understand volume of trash to be unloaded at disposal site d2 Trace disposal based on type of waste
Increase recycling rate to 20% by end of FY 2030	✓	✓	"Recycle rate"(%)= E "Waste brought in for recycling annually" / B "total waste generated annually"	E c1 Determine type of waste
Improved waste-related regulations (2 nd /3 rd stage: Yes)	✓		Improvement of waste-related regulations	e2 Reflect in rules
Decrease fill rate of open dump sites among final disposal sites (2 nd stage)		✓	"Open dump site fill rate"= F "# of open dump sites" / G "# of final disposal sites" or H "total amt. disposed at open dump sites" / I "total volume disposed at final disposal sites"	F H a1 Understand local waste generation G N/A I d1 More efficiently understand volume of trash to be unloaded e1 Consider short-term reform measures, develop mid/long-term policy e2 Reflect in rules
Formulate regulations to create & promote recycling society/economy (3 rd stage, final outcome: Yes)	✓		Digital Solution may not match for the KPI	e1 Consider short-term reform measures, develop mid/long-term policy e2 Reflect in rules
Citizens participate in 3R cycle activities (2 nd , 3 rd stage, final outcome: Yes)	✓		Acquire via J "attitude survey?"	J f1 Promote dissemination of waste rules to waste generators
Expand venous industry (3 rd stage, final outcome: Yes)	✓		Digital Solution may not match for the KPI	N/A
Increase citizen awareness of urban waste and the environment (3 rd stage)		✓	Acquire via J "attitude survey?"	K f1 Promote dissemination of waste rules to waste generators
Increase proper disposal rate of hazardous waste (3 rd stage: 80%)	✓		"Proper disposal rate of hazardous waste"(%)= K "Amt. of hazardous waste properly disposed of annually" / L "total amt. of hazardous waste (incl. infectious waste) generated annually"	L d2 Trace disposal based on type of waste M N/A
Annual generation of 50kg or less of urban hazardous waste	✓		"Amt of annually waste generate per person annually"(kg/capita/year)= L "total amt of hazardous waste (incl. infectious waste) generated annually"/"total pop."	N/A

1. Intermediate outcomes are select targets from attachment 3 of the cluster business plan draft

Source: Cluster business plan (draft)

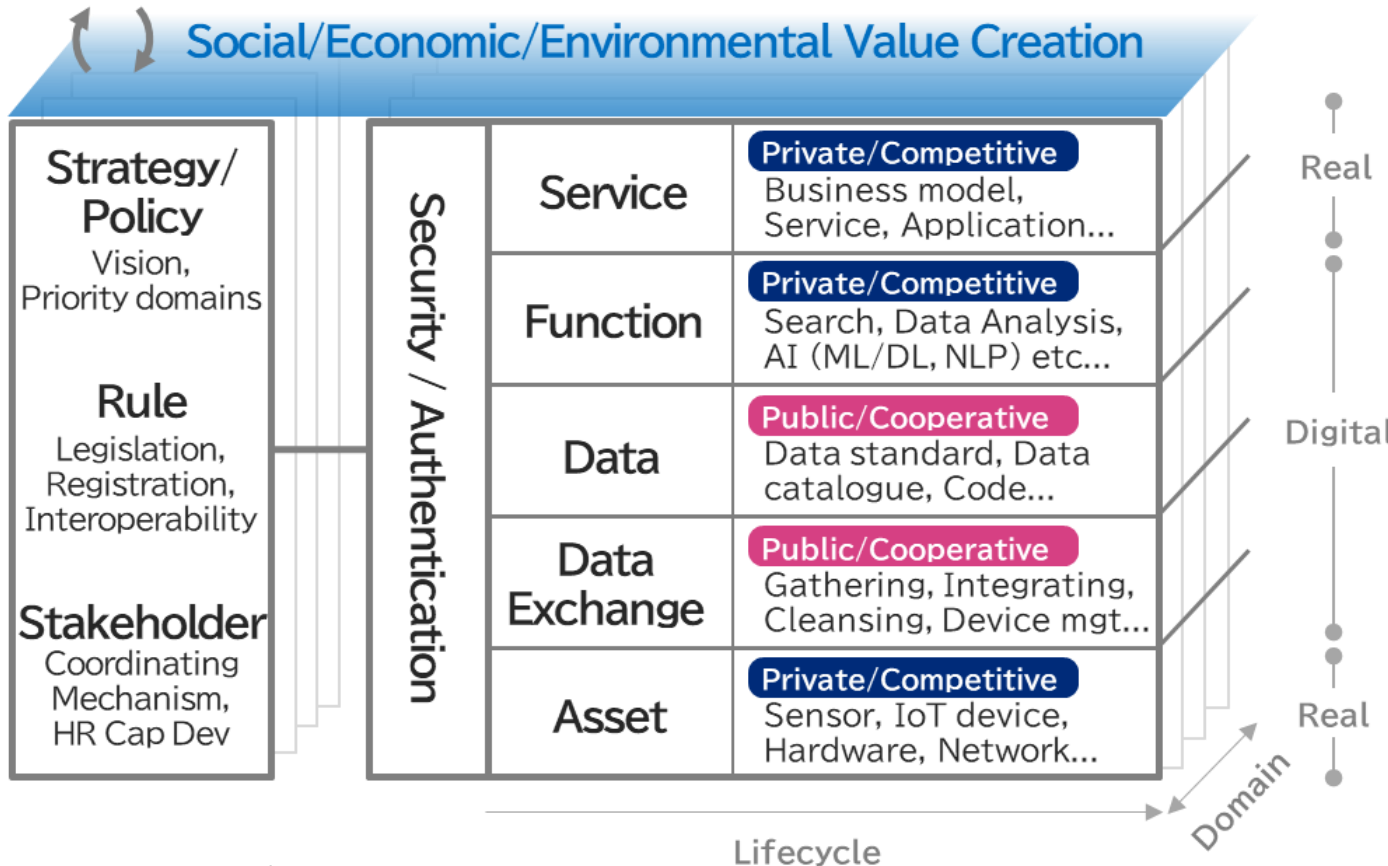

Digital solutions/data are also useful for acquiring & managing KPIs

Today's topics

1. JICA DX Vision & Role
2. Mapping potential digital solutions for a waste management value chain
3. Plotting to the development scenarios utilizing digital solutions & KPI acquisition/management
4. Digital architecture for utilizing digital solutions
5. Examples of digital solutions

When thinking about the DX, the reference digital architecture helps you position what are on the issues and what to do /where to go.

DX Approach 1

Go between Real & Digital

What JICA has been doing is pretty much in Real world. Change our glasses and see and jump into the Digital world.

DX Approach 2

Go Horizontal

Be a platformer on the horizontal layer

Go Vertical

Integrate multi-layers vertically

Go Diagonal

Connect cross-domain data to maximize value

Go the Frame

Create the digital architecture ecosystem

DX Approach 3

Go For the Private

For cooperative area, design the public-led cooperative area to facilitate more private sector participation.

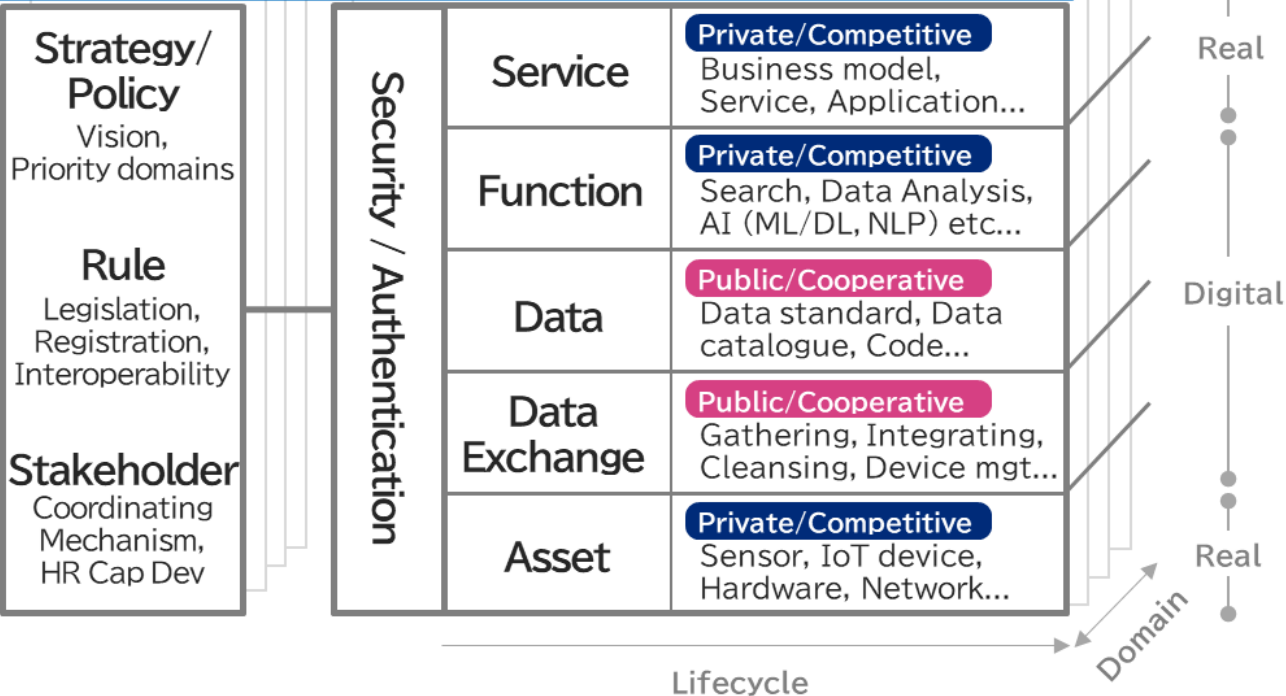

Go With the Private

For competitive area, give space to the private sector to play its fullest role in innovation.

Digital architecture holds "cooperative/private-led" and "competitive/public-led" areas. This defines a government intervention that avoids excessive competition in the cooperative areas and encourages service improvement through fair competition among the private sector in the comp area.

People Service User, Data provider	Benefit of personalized/optimized services Proactive data sharing based on data trust
---	--

Social/Economic/Environmental Value Creation

Role of the Public

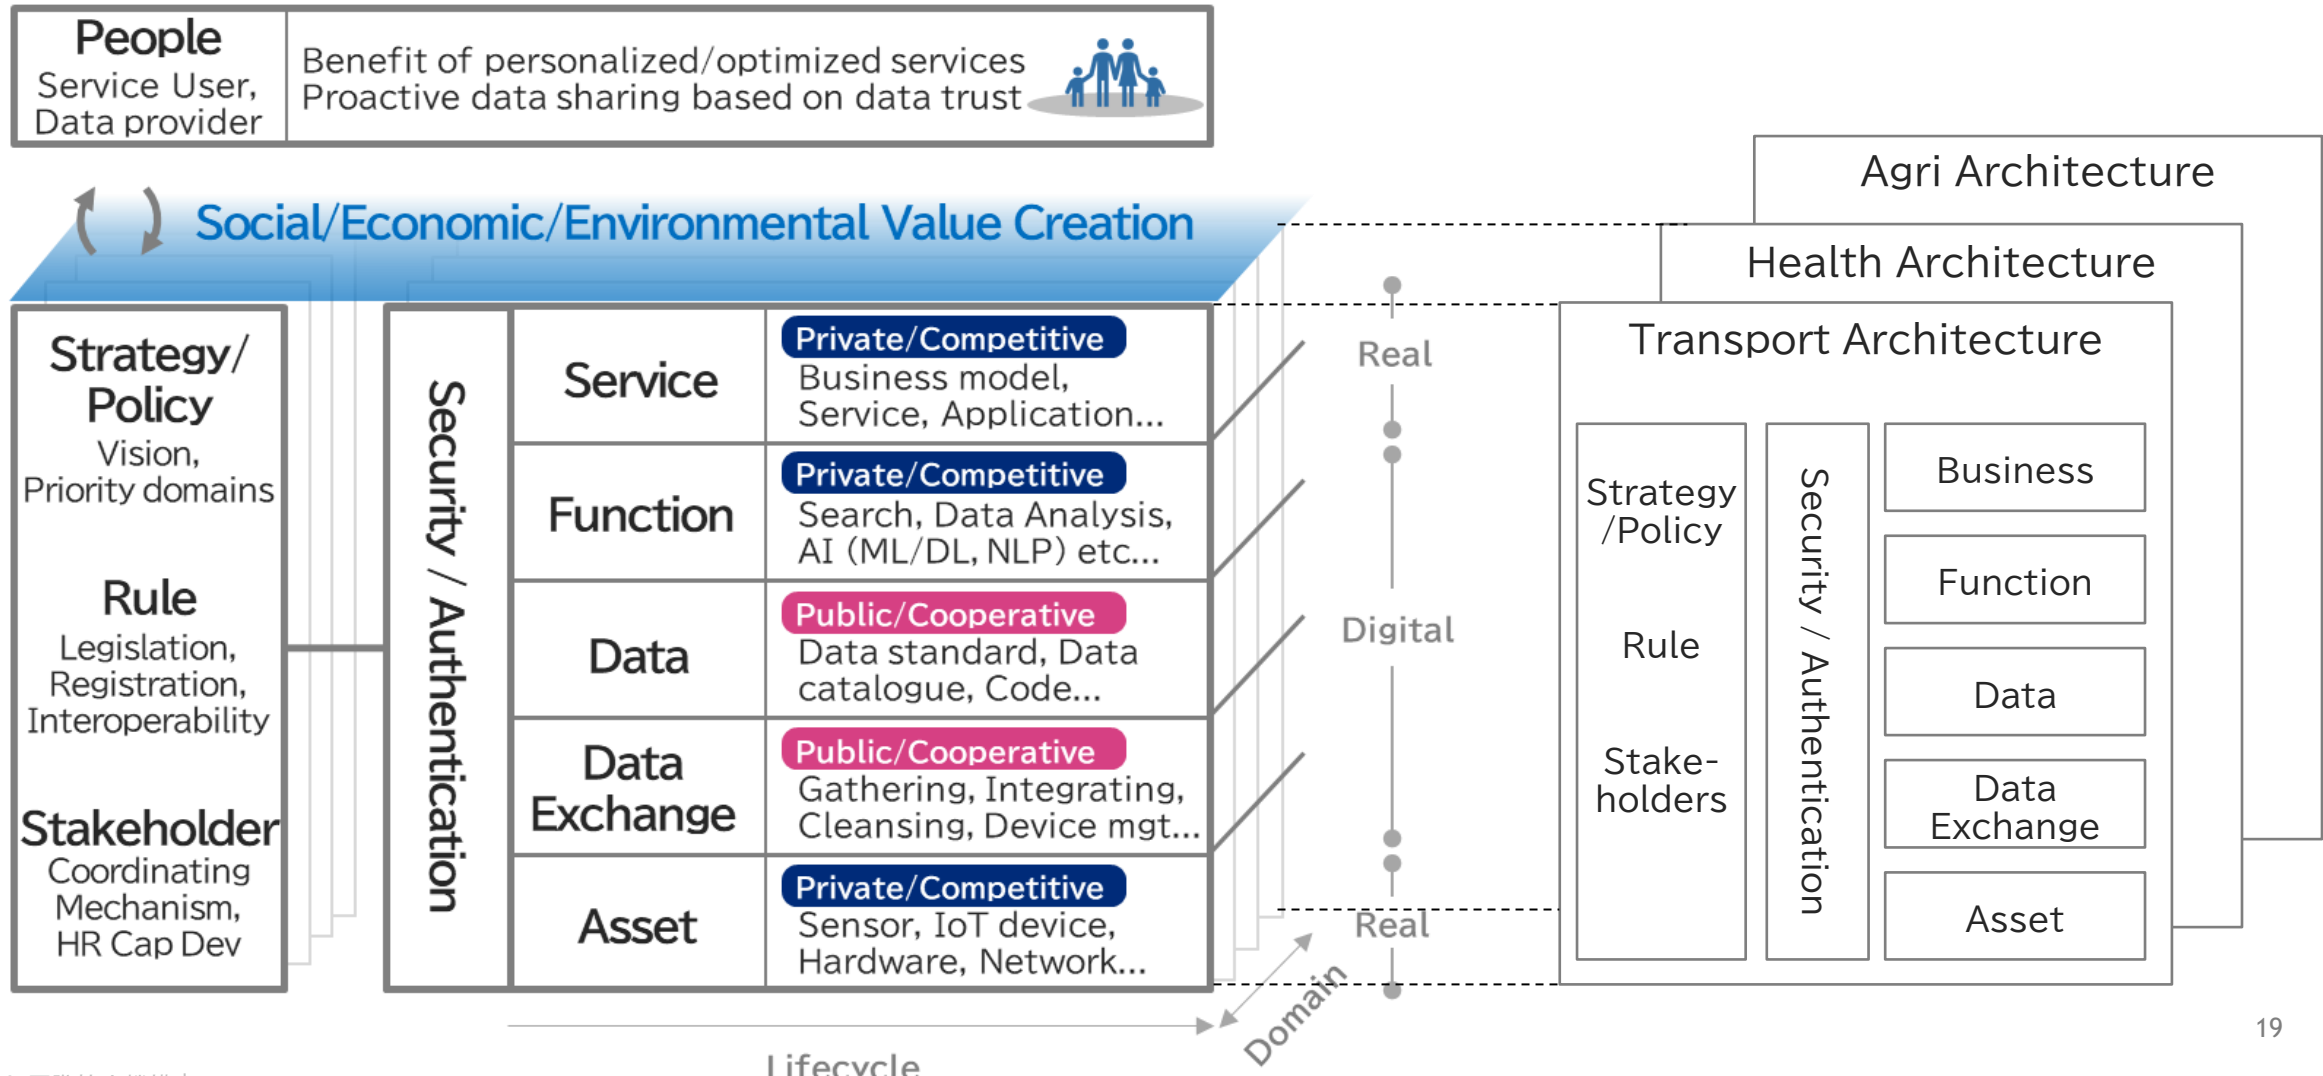

Cooperative Area (Public-led)

- [Difficult to set barriers to entry in the digital space](#), so dominance by foreign PFs is likely to occur.
- Users lock-in by the PFs that increases the cost of switching and the risk of giving up its profits and value-added data captured, thereby [hindering the social return as a whole](#).
- The government should take the [lead in the cooperative area](#) - [define common functions](#), [promote data utilization](#) by industry / government / academia, and [create an enabling environment for innovation](#).

Competitive Area (Private-led)

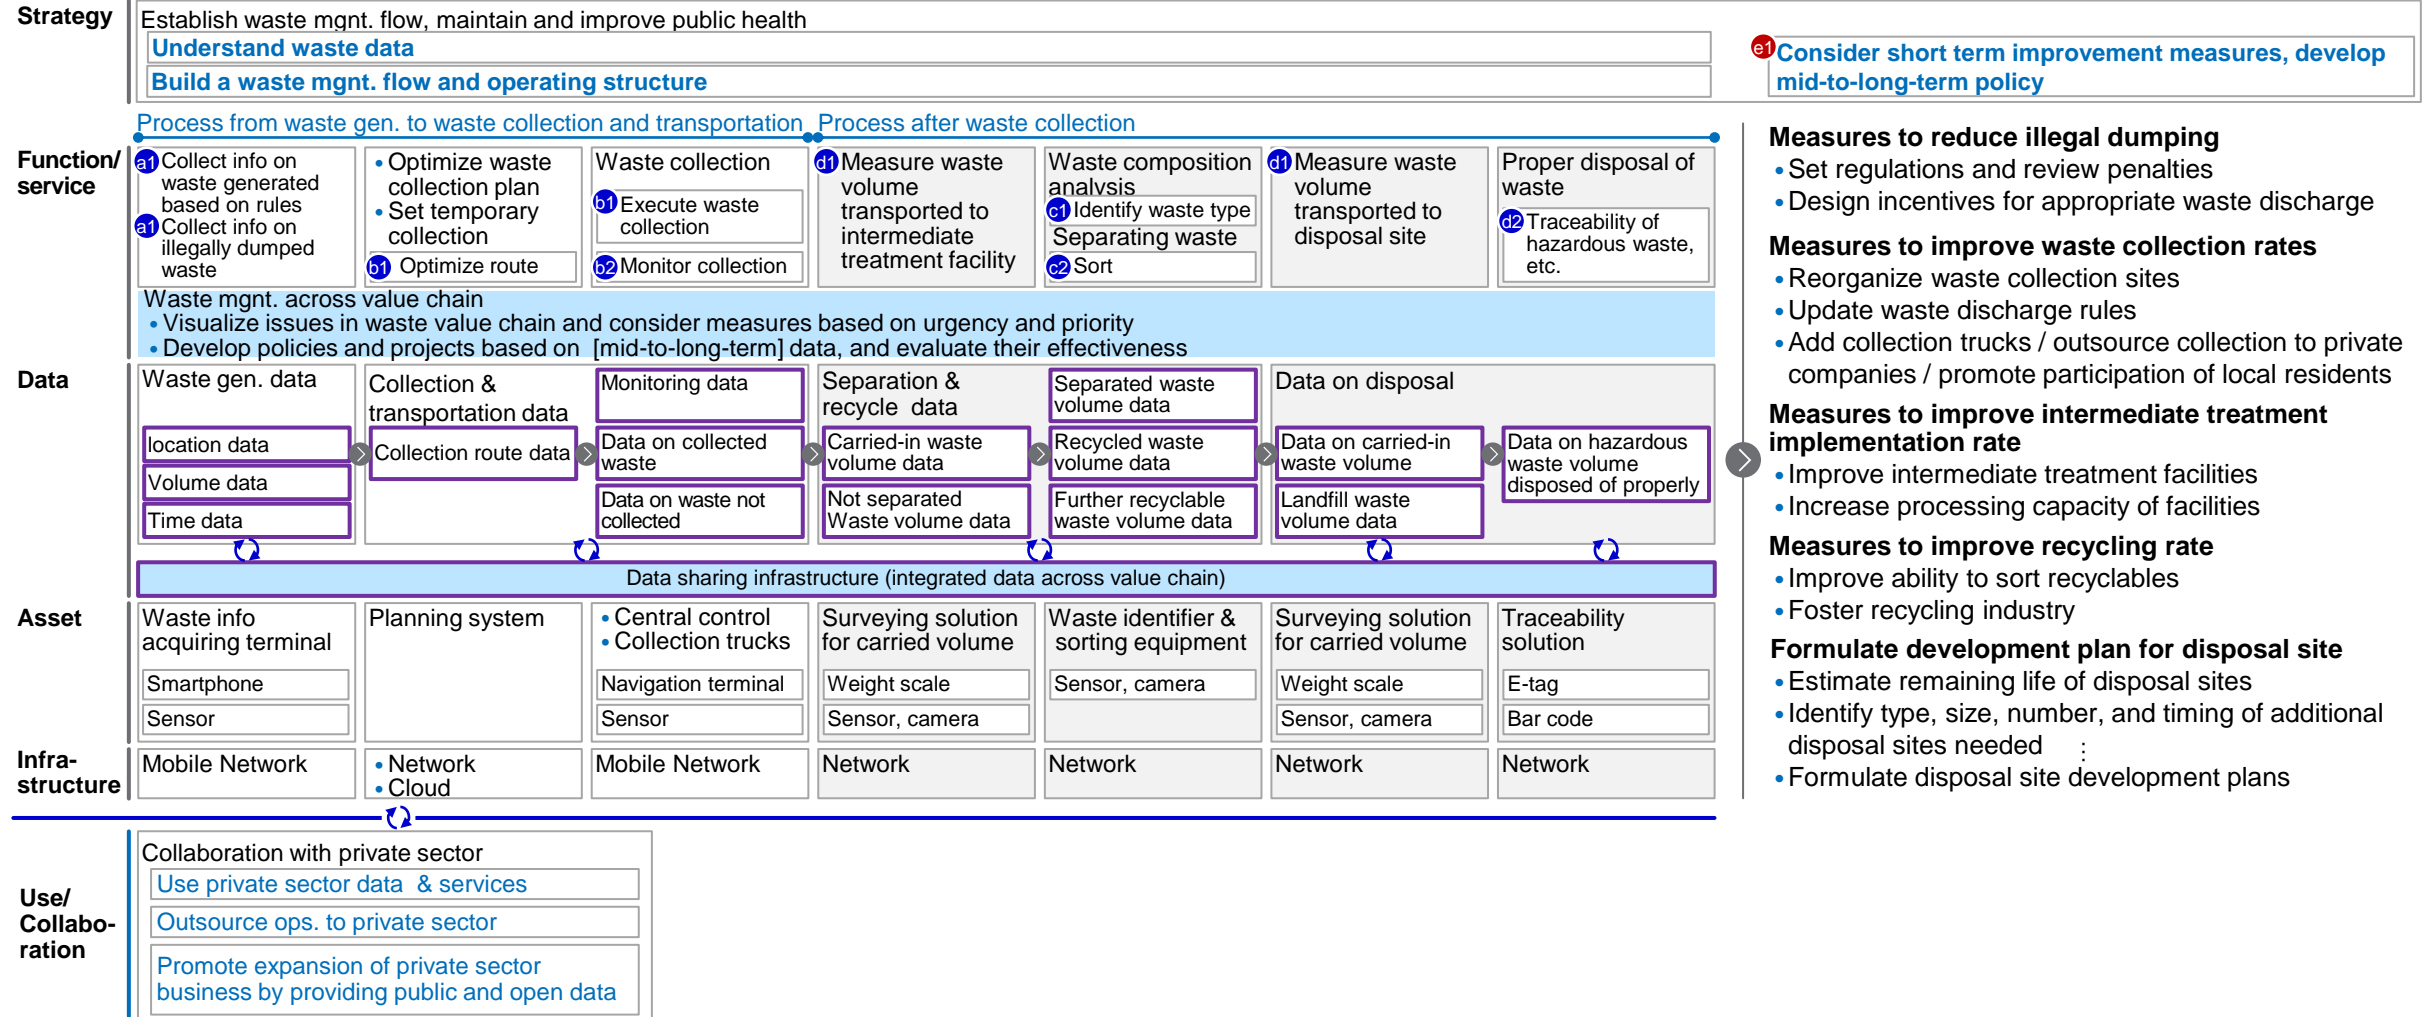

- The private sector develops services, applications, and devices, [on the common functions defined in the cooperative area](#) by the public.
- Holding a level playing field to mobilize private-led ideas and finances in the competitive area is a key factor for [generating diverse and convenient services](#) for the people.

The reference digital architecture is an abstract, conceptual framework. This should be used in response to each sector domain.

To realize data collaboration across the value chain and create added value, necessary to consider appropriate intervention points and role to be played by public based on a holistic view of digital architecture

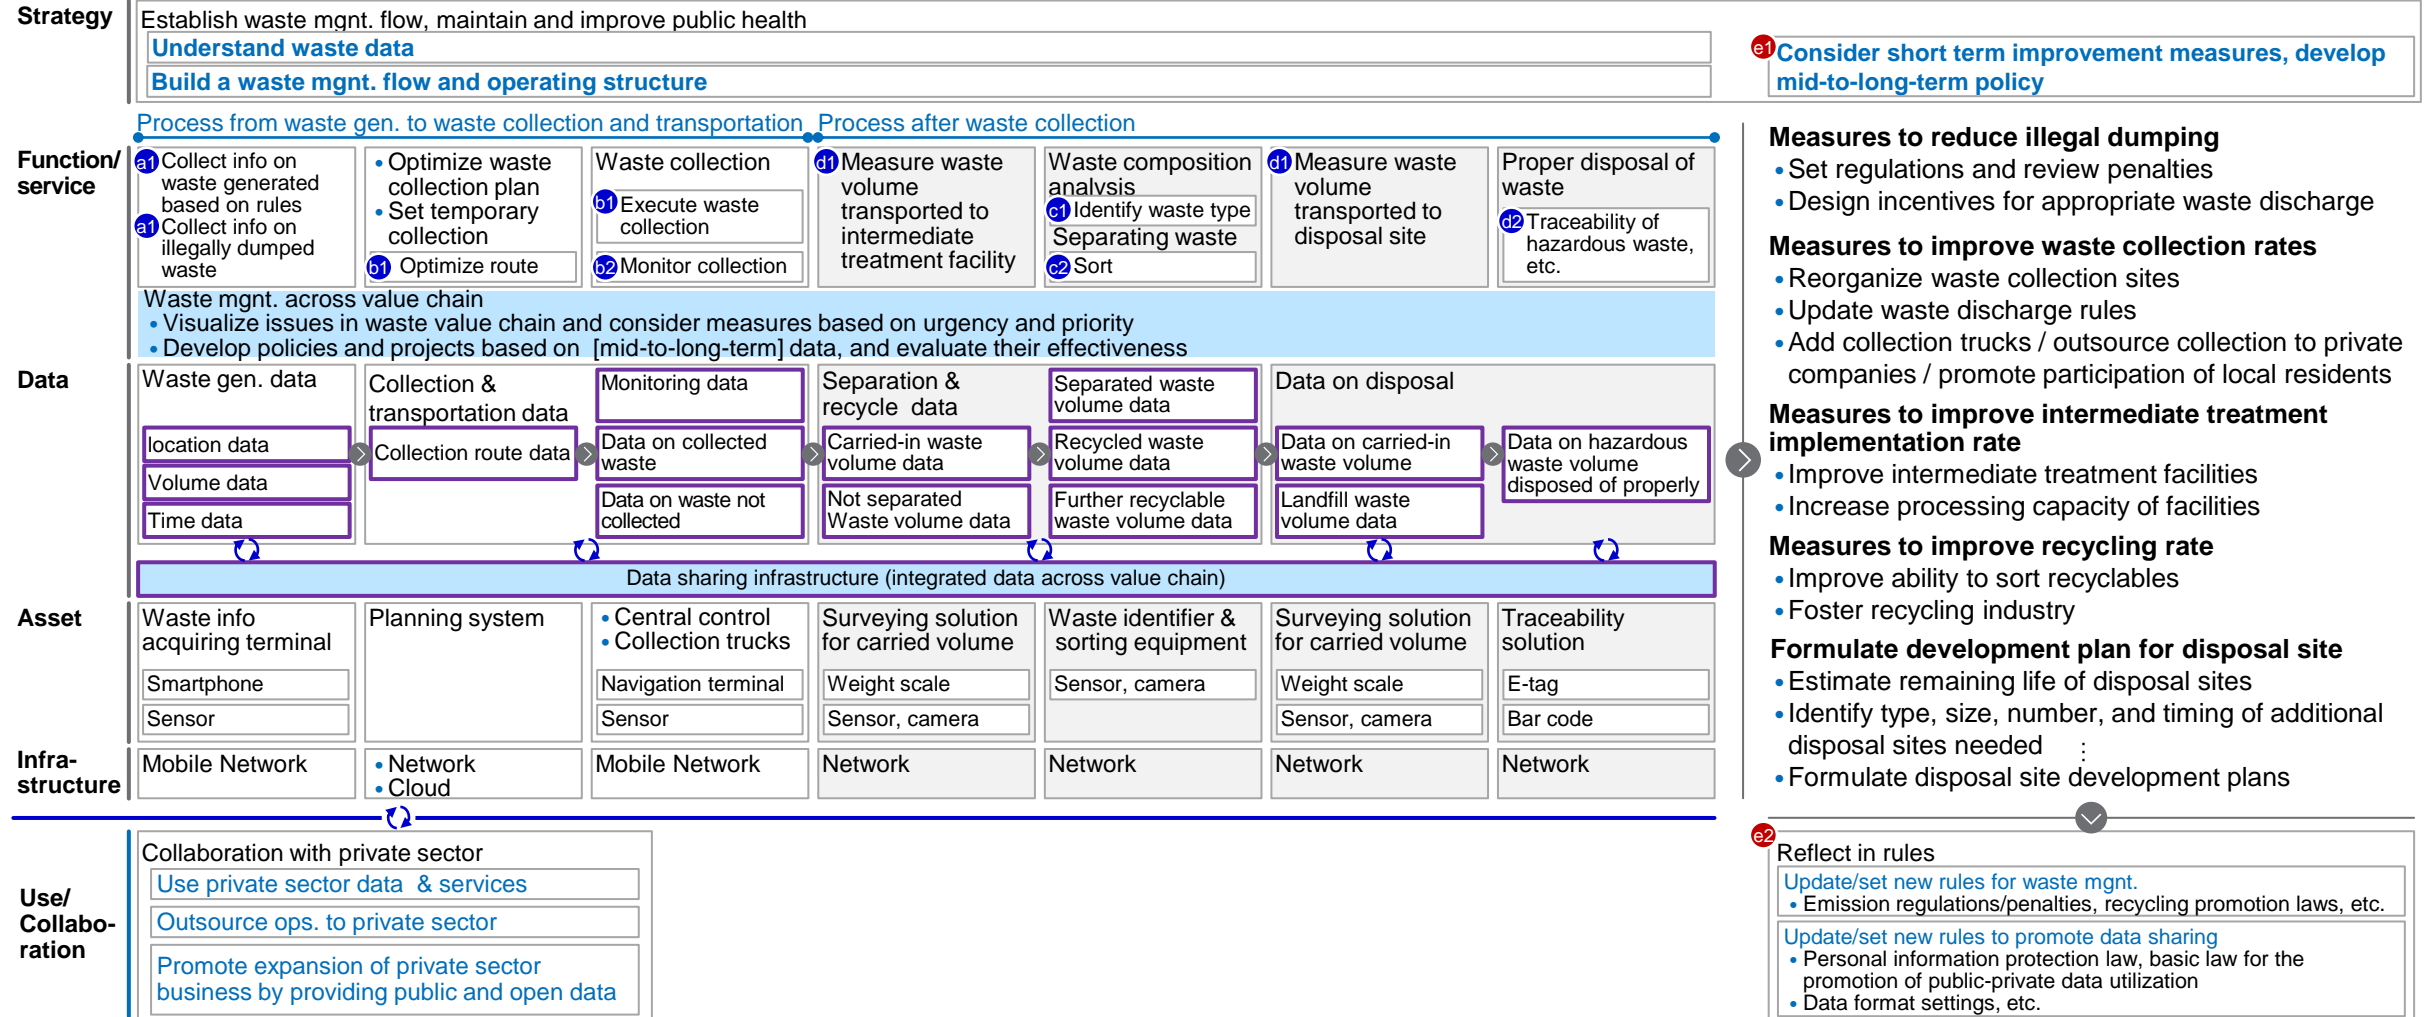

Items across the value chain Data

- Measures to reduce illegal dumping**
 - Set regulations and review penalties
 - Design incentives for appropriate waste discharge
- Measures to improve waste collection rates**
 - Reorganize waste collection sites
 - Update waste discharge rules
 - Add collection trucks / outsource collection to private companies / promote participation of local residents
- Measures to improve intermediate treatment implementation rate**
 - Improve intermediate treatment facilities
 - Increase processing capacity of facilities
- Measures to improve recycling rate**
 - Improve ability to sort recyclables
 - Foster recycling industry
- Formulate development plan for disposal site**
 - Estimate remaining life of disposal sites
 - Identify type, size, number, and timing of additional disposal sites needed
 - Formulate disposal site development plans

To realize data collaboration across the value chain and create added value, necessary to consider appropriate intervention points and role to be played by public based on a holistic view of digital architecture

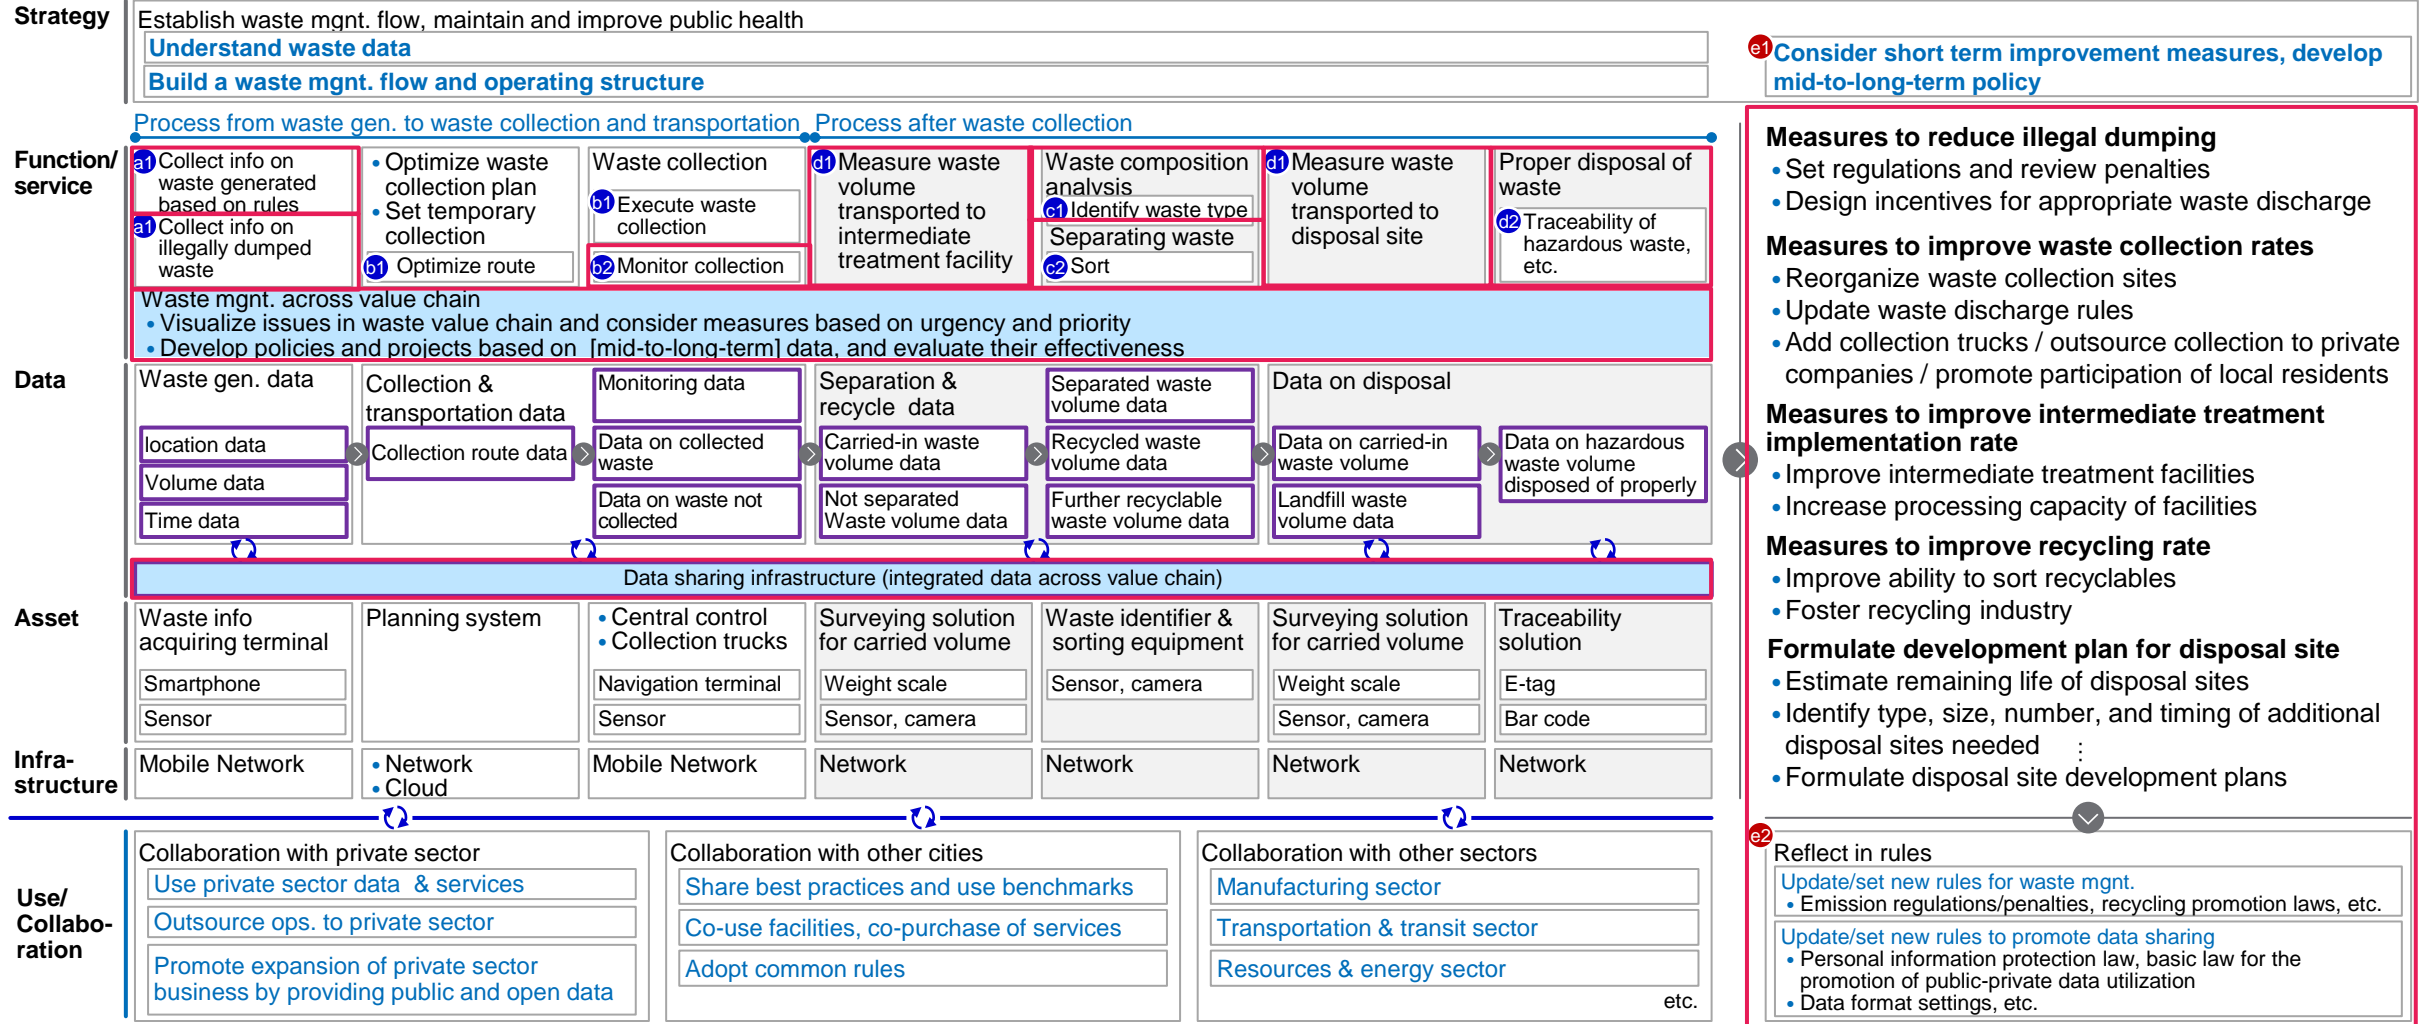

Items across the value chain □ Data

- Measures to reduce illegal dumping**
- Set regulations and review penalties
 - Design incentives for appropriate waste discharge
- Measures to improve waste collection rates**
- Reorganize waste collection sites
 - Update waste discharge rules
 - Add collection trucks / outsource collection to private companies / promote participation of local residents
- Measures to improve intermediate treatment implementation rate**
- Improve intermediate treatment facilities
 - Increase processing capacity of facilities
- Measures to improve recycling rate**
- Improve ability to sort recyclables
 - Foster recycling industry
- Formulate development plan for disposal site**
- Estimate remaining life of disposal sites
 - Identify type, size, number, and timing of additional disposal sites needed
 - Formulate disposal site development plans

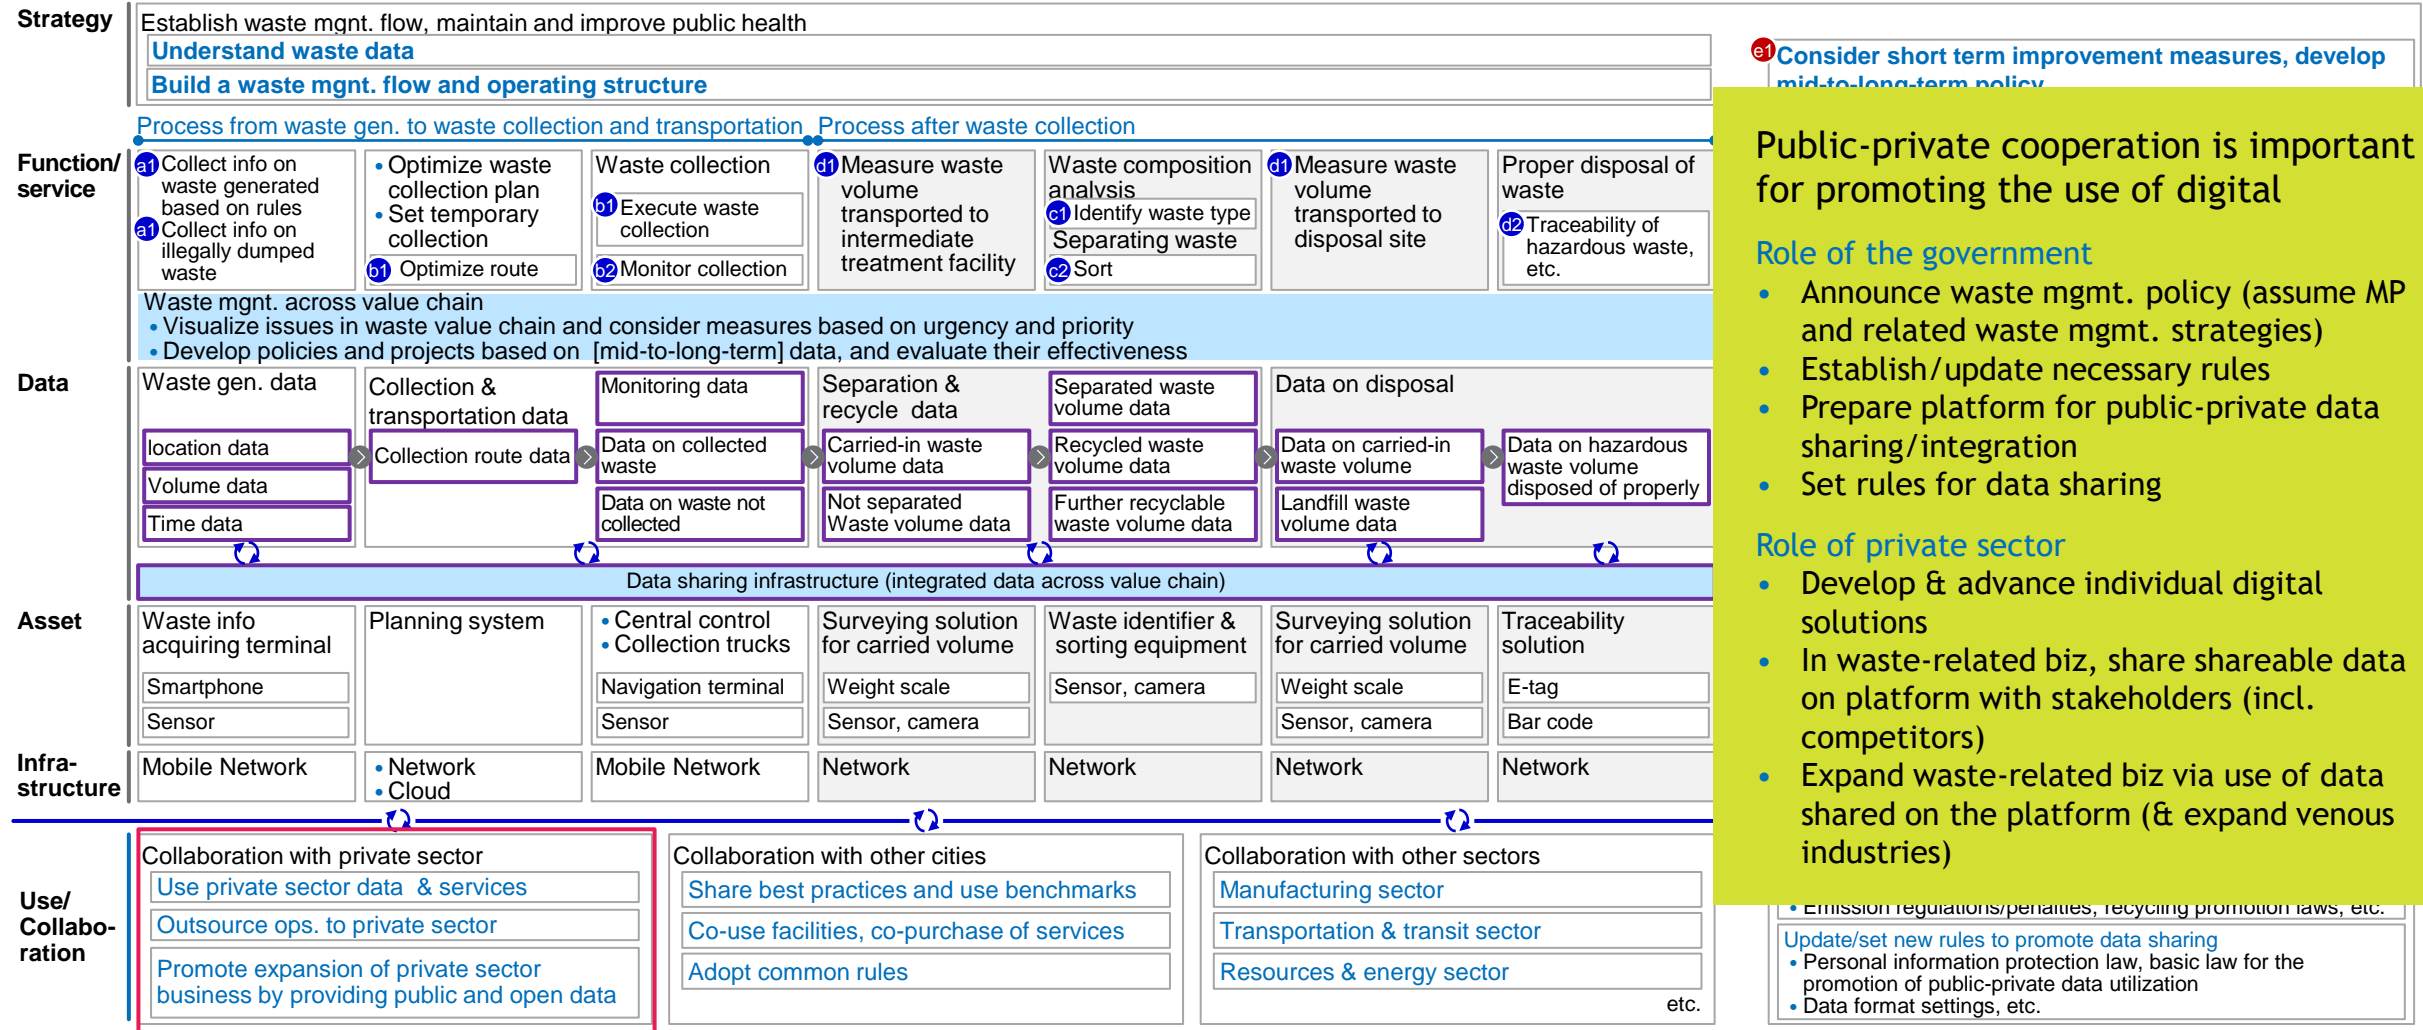

- Through the appropriate accumulation, mgmt and use of acquired data, using digital solutions enables more comprehensive impact (connect point of individual support to line then plane)
- To do this, it's necessary to imagine the ideal big picture (digital architecture) and promote the preparation of data sharing infra in addition to introducing individual solutions

□ Data

Since JICA alone cannot provide support using digital solutions, suitable stakeholders (e.g., companies with digital solutions) are needed

of digital architecture

e1 Consider short term improvement measures, develop mid-to-long-term policy

Public-private cooperation is important for promoting the use of digital

Role of the government

- Announce waste mgmt. policy (assume MP and related waste mgmt. strategies)
- Establish/update necessary rules
- Prepare platform for public-private data sharing/integration
- Set rules for data sharing

Role of private sector

- Develop & advance individual digital solutions
- In waste-related biz, share shareable data on platform with stakeholders (incl. competitors)
- Expand waste-related biz via use of data shared on the platform (& expand venous industries)

- Emission regulations/penalties, recycling promotion laws, etc.
- Update/set new rules to promote data sharing
- Personal information protection law, basic law for the promotion of public-private data utilization
- Data format settings, etc.

Today's topics

1. JICA DX Vision & Role
2. Mapping potential digital solutions for a waste management value chain
3. Plotting to the development scenarios utilizing digital solutions & KPI acquisition/management
4. Digital architecture for utilizing digital solutions
5. **Examples of digital solutions**

: Data that should certainly have been acquired
 : Data that should have been or could have been acquired

1 Smartphone app that lets you pin and make notes on any location (could be used in creating data on waste location)

- Smartphone app that lets you pin locations and make notes
- Can drop a pin and mark current location with a single touch
 - Can drop pins offline
 - Has note-taking function

Details of digital solution use		Outcome	Opinion on use
Creator	Shigeto TAKAGI		<ul style="list-style-type: none"> • Can probably be used in mapping generated waste • Can add info on volume with notes function • Can be used in countries/cities with poor mobile networks since pins can be placed offline if map data is downloaded • Lat./long. data is easily extractable, probably easy to link to other digital solutions
Use case initiatives	<ul style="list-style-type: none"> • Smartphone app that lets you record location info and note on a map using app GPS function 		
Digital tech used/data used	<ul style="list-style-type: none"> • GPS 		
Digital architecture	Service/function layer	<ul style="list-style-type: none"> • Record of GPS info 	
	ID/data layer	<ul style="list-style-type: none"> • Location, map 	
	Data link/PF layer	<ul style="list-style-type: none"> • Data linkage 	
	Device/infrastructure layer	<ul style="list-style-type: none"> • Smartphone/(mobile network)

: Data that should certainly have been acquired
 : Data that should have been or could have been acquired

2 Estimating volume of waste piles using stereo camera/LiDAR

Using images taken by stereo camera or LiDAR, estimate the 3D form of an object and roughly calculate the volume to estimate the amount of waste

Details of digital solution use		Outcome	Opinion on use	
Provider	Applied Vision Systems Corporation		<ul style="list-style-type: none"> A solution for estimating volume, so must be linked with image location info to map waste Can probably be used with GPS It can probably be used in many countries since it does not require digital infrastructure If smartphone LiDAR can be used, it would improve portability 	
Summary	<ul style="list-style-type: none"> Roughly calculate the volume of piles of trash Can measure efficiently since stereo cameras/LiDAR are easy to move Highly possible it can also be used in countries with less developed infrastructure since it does not require a network 			
Digital tech used/data used	<ul style="list-style-type: none"> Stereo vision Image analysis 			
Digital architecture	Service/function layer	<ul style="list-style-type: none"> Waste volume estimate 		
	ID/data layer	<ul style="list-style-type: none"> 3D cloud point data 		
	Data link/PF layer	<ul style="list-style-type: none"> – 		
	Device/infrastructure layer	<ul style="list-style-type: none"> Stereo camera or laser scanner(LiDAR measuring tool) 		
		<ul style="list-style-type: none"> Can roughly calculate volume using images taken by stereo camera or LiDAR and estimating the 3D form of an object May not be able to correctly measure if there are overexposed whites or crushed blacks in stereo camera picture LiDAR is better in terms of measurement stability and equipment maintainability 		

: Data that should certainly have been acquired
 : Data that should have been or could have been acquired

2' (Ref) iPhone 3D scanning function using LiDAR

Japan	Development stage			Value chain				Experimental	Data generated			Internet required	
	Stage 1	Stage 2	Stage 3	Waste generation	Collection & transportation	Separation & recycling	Disposal	Practical use	Volume	Composition	Location	Yes	No

Use iPhone LiDAR function to create 3D cloud point data

Details of digital solution use		Outcome	Opinion on use						
Provider	Armonicos Co., Ltd.	Can easily obtain 3D cloud point data	<ul style="list-style-type: none"> If it can be used in estimating volume of pile of waste using stereo camera/LiDAR, the volume of waste in irregular open dumps could be effectively measured Need to keep in mind this digital solution can only estimate volume 						
Summary	<ul style="list-style-type: none"> Offer app that creates 3D cloud point data using iPhone LiDAR function 								
Digital tech used/data used	<ul style="list-style-type: none"> LiDAR 								
Digital architecture	<table border="1"> <tr> <td>Service/function layer</td> <td> <ul style="list-style-type: none"> 3D cloud point data creation </td> </tr> <tr> <td>ID/data layer</td> <td> <ul style="list-style-type: none"> 3D cloud point data </td> </tr> <tr> <td>Data link/PF layer</td> <td> <ul style="list-style-type: none"> — </td> </tr> <tr> <td>Device/infrastructure layer</td> <td> <ul style="list-style-type: none"> iPhone LiDAR sensor </td> </tr> </table>	Service/function layer		<ul style="list-style-type: none"> 3D cloud point data creation 	ID/data layer	<ul style="list-style-type: none"> 3D cloud point data 	Data link/PF layer	<ul style="list-style-type: none"> — 	Device/infrastructure layer

 : Data that should have been or could have been acquired

3 Mapping trash abandoned on the road via mobile app that uses GIS

2 surveyors patrol the survey area by car, then enter a trash accumulation score for each road segment into a GIS-linked mobile app to create a map

- Type of waste (4): regular trash, oversized trash, illegal dumping, weeds
- Trash accumulation score (3 levels): no trash, permissible range, requires collection

Details of digital solution use		Outcome	Opinion on use						
Providers	Los Angeles Dept of Public Health	Map waste info to roads by patrolling over 22,000 miles <ul style="list-style-type: none"> • Types (4): regular trash, oversized trash, illegal dumping, weeds • Trash accumulation score (3 levels): no trash, permissible range, requires collection 	<ul style="list-style-type: none"> • Can map waste by driving around city in car and recording where waste has been left • Requires labor but no special skills, probably low hurdle to use • This solution uses mobile network, but a method to record status using GPS location and read it later may be possible 						
Use case initiatives	<ul style="list-style-type: none"> • Employees of the city Dept of Public Health patrol city streets to assess trash accumulation, then turn it into data using a mobile system • Map roads with high amt of waste based on data 								
Digital tech used/data used	<ul style="list-style-type: none"> • GIS 								
Digital architecture	<table border="1"> <tr> <td>Service/function layer</td> <td> <ul style="list-style-type: none"> • Mapping of types, volume of trash on roads </td> </tr> <tr> <td>ID/data layer</td> <td> <ul style="list-style-type: none"> • Trash type, volume, location info & map info </td> </tr> <tr> <td>Data link/PF layer</td> <td> <ul style="list-style-type: none"> • Data collection, data integration </td> </tr> <tr> <td>Device/infrastructure layer</td> <td> <ul style="list-style-type: none"> • In-vehicle camera/mobile network </td> </tr> </table>			Service/function layer	<ul style="list-style-type: none"> • Mapping of types, volume of trash on roads 	ID/data layer	<ul style="list-style-type: none"> • Trash type, volume, location info & map info 	Data link/PF layer	<ul style="list-style-type: none"> • Data collection, data integration

: Data that should certainly have been acquired
 : Data that should have been or could have been acquired

4 Detecting and mapping types of city waste using camera-equipped smartphone and AI

Take pictures of waste within city using mobile camera and app to generate info on and map volume, types, and location of waste using AI image analysis

Details of digital solution use		Outcome	Opinion on use						
Providers	City of Amsterdam Innovation Team	<ul style="list-style-type: none"> Smartphone camera images, GPS location, and time of capture sent to central server in real-time Waste is detected in central server and a map created <ul style="list-style-type: none"> Compatible with cardboard, trash bags, waste disposal containers, lumber (to be expanded) 	<ul style="list-style-type: none"> Needs mobile network, smartphone but can be used in creating composition data Could also be used to collect waste info via use by citizens Code is open source so it could be started at low cost 						
Use case initiatives	<ul style="list-style-type: none"> Build a reporting scheme for waste info that scales and allows resident participation via installation of a smartphone app Waste mapping based on collected info 								
Digital tech used/data used	<ul style="list-style-type: none"> Image analysis GPS 								
Digital architecture	<table border="1"> <tr> <td>Service/function layer</td> <td>Waste type, volume mapping</td> </tr> <tr> <td>ID/data layer</td> <td>Waste type, volume, location info, map info</td> </tr> <tr> <td>Data link/PF layer</td> <td>Data collection, data integration</td> </tr> <tr> <td>Device/infrastructure layer</td> <td>Smartphone with camera/mobile network</td> </tr> </table>			Service/function layer	Waste type, volume mapping	ID/data layer	Waste type, volume, location info, map info	Data link/PF layer	Data collection, data integration
Service/function layer	Waste type, volume mapping								
ID/data layer	Waste type, volume, location info, map info								
Data link/PF layer	Data collection, data integration								
Device/infrastructure layer	Smartphone with camera/mobile network								

: Data that should certainly have been acquired
 : Data that should have been or could have been acquired

5 Mapping illegally dumped waste using resident participation via smartphone app

Take pictures of illegally dumped city waste using smartphone with camera and map using app

- Resident participation app
- Goal is to alert local government and NGOs of waste info

Details of digital solution use		Outcome	Opinion on use								
Providers	TrashOut.NGO	<ul style="list-style-type: none"> • Residents submit info on trash • A map with images of trash is created <ul style="list-style-type: none"> - Can submit add'l info on whether it was collected or not 	<ul style="list-style-type: none"> • May be useful in countries/cities where smartphones are commonplace • Seems good from a cost standpoint since waste is mapped via resident participation • Useful in fostering resident awareness of waste mgmt? 								
Summary	<ul style="list-style-type: none"> • Take picture of trash with smartphone camera and map using app 										
Digital tech used/data used	<ul style="list-style-type: none"> • GPS (on smartphone) 										
Digital architecture	<table border="1"> <tr> <td>Service/function layer</td> <td> <ul style="list-style-type: none"> • Waste mapping </td> </tr> <tr> <td>ID/data layer</td> <td> <ul style="list-style-type: none"> • Waste location info, image data, map info </td> </tr> <tr> <td>Data link/PF layer</td> <td> <ul style="list-style-type: none"> • Data collection, data integration </td> </tr> <tr> <td>Device/infrastructure layer</td> <td> <ul style="list-style-type: none"> • Smartphone with camera/mobile network </td> </tr> </table>			Service/function layer	<ul style="list-style-type: none"> • Waste mapping 	ID/data layer	<ul style="list-style-type: none"> • Waste location info, image data, map info 	Data link/PF layer	<ul style="list-style-type: none"> • Data collection, data integration 	Device/infrastructure layer	<ul style="list-style-type: none"> • Smartphone with camera/mobile network
Service/function layer	<ul style="list-style-type: none"> • Waste mapping 										
ID/data layer	<ul style="list-style-type: none"> • Waste location info, image data, map info 										
Data link/PF layer	<ul style="list-style-type: none"> • Data collection, data integration 										
Device/infrastructure layer	<ul style="list-style-type: none"> • Smartphone with camera/mobile network 										

: Data that should certainly have been acquired
 : Data that should have been or could have been acquired

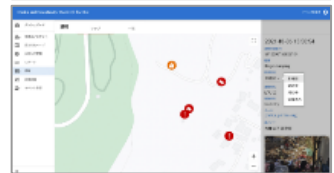

5 Mapping & collecting illegally dumped waste using resident participation via smartphone app

Residents take pictures of illegally dumped trash they have collected using smartphone camera and share info/map it via app

- Citizen participation app
- Forms and develops momentum for litter picking activities by having users mutually share and acknowledge each other
- Also offer a local gov't version of Pirika so they can quantitatively understand status of litter and be alerted to illegal dumping

Details of digital solution use		Outcome	Opinion on use								
Provider	Pirika, Inc.	<ul style="list-style-type: none"> • Has spread to over 100 countries, with over 200M pieces of trash picked up • Local gov't version of Pirika has also been introduced to 19 municipalities domestically  	<ul style="list-style-type: none"> • May be useful in countries/cities where smartphones are commonplace • Seems good from a cost standpoint since waste is mapped via resident participation • Useful in fostering resident awareness of waste mgmt? 								
Summary	<ul style="list-style-type: none"> • Residents take pictures of illegally dumped trash they have collected using smartphone camera and share info/map it via app 										
Digital tech used/data used	<ul style="list-style-type: none"> • GPS (on smartphone) 										
Digital architecture	<table border="1"> <tr> <td>Service/function layer</td> <td> <ul style="list-style-type: none"> • Waste mapping </td> </tr> <tr> <td>ID/data layer</td> <td> <ul style="list-style-type: none"> • Waste location info, image data, map info </td> </tr> <tr> <td>Data link/PF layer</td> <td> <ul style="list-style-type: none"> • Data collection, data integration </td> </tr> <tr> <td>Device/infrastructure layer</td> <td> <ul style="list-style-type: none"> • Smartphone with camera/mobile network </td> </tr> </table>			Service/function layer	<ul style="list-style-type: none"> • Waste mapping 	ID/data layer	<ul style="list-style-type: none"> • Waste location info, image data, map info 	Data link/PF layer	<ul style="list-style-type: none"> • Data collection, data integration 	Device/infrastructure layer	<ul style="list-style-type: none"> • Smartphone with camera/mobile network

ID/data layer	<ul style="list-style-type: none"> • Waste location info, image data, map info 										
Data link/PF layer	<ul style="list-style-type: none"> • Data collection, data integration 										
Device/infrastructure layer	<ul style="list-style-type: none"> • Smartphone with camera/mobile network 										

: Data that should certainly have been acquired
 : Data that should have been or could have been acquired

6 Estimate of amount waste in open dump via drone aerial survey

India	2021	Development stage			Value chain				Experimental		Data generated			Internet required	
		Stage 1	Stage 2	Stage 3	Waste generation	Collection & transportation	Separation & recycling	Disposal	Practical use	Volume	Composition	Location	Yes	No	

At open dumps in Mumbai, India, volume of waste being removed is estimated using drone photogrammetry, and has shown high accuracy

- Margin of error for estimated volume from aerial photogrammetry and actual volume is under 10%

Details of digital solution use		Outcome	Opinion on use
Providers	Pioneer Foundation Engineers (P) Ltd	Via drone photogrammetry, estimate waste volume with <10% margin of error <ul style="list-style-type: none"> • MOE is calculated by comparing drone estimated volume and actual volume removed by truck <ul style="list-style-type: none"> - 1st trial MOE: 8.5% - 2nd trial MOE: 9% - 3rd trial MOE: 7.8% • 12 ground reference points set for surveying 	<ul style="list-style-type: none"> • Drone may not need telecom network • Can it be used to estimate total amt. of waste in large garbage dumps already located?
Use case initiatives	<ul style="list-style-type: none"> • In order to use open dumps for other purposes, total amt of waste to remove and periodic progress are estimated using drone photogrammetry & amt of work needed is specified. Utilized in activity planning 		
Digital tech used/data used	<ul style="list-style-type: none"> • Drone photogrammetry <ul style="list-style-type: none"> - GIS - Image analysis • Differential GPS 		
Digital architecture	<ul style="list-style-type: none"> • Waste volume estimate

 : Data that should have been or could have been acquired

11 Optimization of waste collection routes

Can record where trash has accumulated, plan route, and give route guidance (route mgmt)
 Can also change the route, reflecting sudden changes in collection system and real-time collection status (route adjustment)
 Collection status and location of collection vehicles can also be confirmed on map (collection status mgmt)

Details of digital solution use		Outcome	Opinion on use						
Providers	Odakyu	<ul style="list-style-type: none"> Optimize route to collect waste from registered collection points Can also change routes based on real-time collection status  	<ul style="list-style-type: none"> Can set points for waste collection, may be easy to link to waste generation info from other digital solutions Can also be used to manage vehicle driving conditions, amt. collected, could address many functions needed in developing countries 						
Use case initiatives	<ul style="list-style-type: none"> Used and customized RUBICON Global tech for Japanese waste collection, and offer route mgmt, route adjustment, and collection status mgmt functions 								
Digital tech used/data used	<ul style="list-style-type: none"> GPS 								
Digital architecture	<table border="1" style="width: 100%; border-collapse: collapse;"> <tr> <td style="background-color: #e0f0ff;">Service/function layer</td> <td> <ul style="list-style-type: none"> Collection route optimization </td> </tr> <tr> <td style="background-color: #e0f0ff;">ID/data layer</td> <td> <ul style="list-style-type: none"> Waste volume, location info, map info </td> </tr> <tr> <td style="background-color: #e0f0ff;">Data link/PF layer</td> <td> <ul style="list-style-type: none"> Data collection, data integration </td> </tr> <tr> <td style="background-color: #e0f0ff;">Device/infrastructure layer</td> <td> <ul style="list-style-type: none"> Mobile device/mobile network </td> </tr> </table>			Service/function layer	<ul style="list-style-type: none"> Collection route optimization 	ID/data layer	<ul style="list-style-type: none"> Waste volume, location info, map info 	Data link/PF layer	<ul style="list-style-type: none"> Data collection, data integration

: Data that should certainly have been acquired
 : Data that should have been or could have been acquired

12 Monitoring of improper loading & unloading of trash using GPS and weight sensors

Track where waste is loaded/unloaded via data on weight applied to axle and GPS, monitor unauthorized loading/unloading
 Can also detect inefficient or improper operations such as idling, speeding, sudden braking and fuel theft

Details of digital solution use		Outcome	Opinion on use						
Providers	TECHNOTON	Can now understand whether collection is going well or if it is being properly loaded/unloaded via changes in load 	<ul style="list-style-type: none"> • Telecom network needed but may be effective in the case of human wrongdoing • Could also be used in understanding amt. of waste carried in from dump site • Need to keep necessity of hardware and maint in mind 						
Use case initiatives	<ul style="list-style-type: none"> • Record key parameters of truck operations using waste collection vehicle monitoring system • Track where waste is loaded/unloaded via weight applied to axle and GPS, monitor if there are irregularities such as unauthorized loading/unloading 								
Digital tech used/data used	<ul style="list-style-type: none"> • GPS • Axle sensor tech • Fuel level sensor tech, etc. 								
Digital architecture	<table border="1"> <tr> <td>Service/function layer</td> <td>• Analyze behaviors and weight of trash in vehicle and detect any irregularities</td> </tr> <tr> <td>ID/data layer</td> <td>• Waste volume, vehicle location, record of operations</td> </tr> <tr> <td>Data link/PF layer</td> <td>• Data collection</td> </tr> <tr> <td>Device/infrastructure layer</td> <td>• Various sensors/mobile network</td> </tr> </table>			Service/function layer	• Analyze behaviors and weight of trash in vehicle and detect any irregularities	ID/data layer	• Waste volume, vehicle location, record of operations	Data link/PF layer	• Data collection
Service/function layer	• Analyze behaviors and weight of trash in vehicle and detect any irregularities								
ID/data layer	• Waste volume, vehicle location, record of operations								
Data link/PF layer	• Data collection								
Device/infrastructure layer	• Various sensors/mobile network								

: Data that should certainly have been acquired
 : Data that should have been or could have been acquired

13 Understanding of waste collection records for each household using a smartphone app

The state of Kerala in India provides an app to manage and track amt of inorganic waste collected from each household

- Each household assigned QR code, can understand volume of waste from each household
- Each household can request waste collection through the app if it has not been collected properly
 - If the collection request is not dealt with in time, it will automatically be forwarded to a higher agency, guaranteeing it will be dealt with

Details of digital solution use		Outcome	Opinion on use	
Providers	Indian state of Kerala, (Tech provider: Keltron)		<ul style="list-style-type: none"> • Telecom network needed • Could be effective for door-to-door collection • Could be possible to set QR to dump site to obtain waste collection status of dump sites from citizens 	
Use case initiatives	<ul style="list-style-type: none"> • Amt and timing of waste disposal for each household is acquired from their assigned QR code • App has a report function that allows households to request collection if it was not done properly 			
Digital tech used/data used	<ul style="list-style-type: none"> • Camera • QR code 			
Digital architecture	Service/function layer	<ul style="list-style-type: none"> • Understanding of amt of waste collected, accepting collection requests 		
	ID/data layer	<ul style="list-style-type: none"> • Waste disposal ID, volume data, date/time data 		
	Data link/PF layer	<ul style="list-style-type: none"> • Data collection, storage, mgmt 		
	Device/infrastructure layer	<ul style="list-style-type: none"> • Smartphone/mobile network

17 Optimized aggregation/creation of data on amt. of materials using mobile app

No-code mobile app creation tool that lets you easily create a mobile app tailored to company operations

- Possible to make apps that reduce man-hours for inspection, status reports from over 100 templates
- Can collect info via network from each device and easily create summarized info

Details of digital solution use	Outcome	Opinion on use
---------------------------------	---------	----------------

Providers	Asteria	Effectively create and aggregate info for operations via smartphone app you created <ul style="list-style-type: none"> • Can create an app with only functions needed for your company's operations 	(If processes of determining, recording waste carried in from collection site are being done by hand) could greatly improve efficiency & timeliness of data creation, accuracy of aggregation	
Use case initiatives	<ul style="list-style-type: none"> • Service that lets you easily create mobile app with no coding • Can easily create app that lets you enter, aggregate items necessary for operations 			
Digital tech used/data used	<ul style="list-style-type: none"> • Mobile app 			
Digital architecture	Service/function layer		<ul style="list-style-type: none"> • Simple data entry, automatic aggregation, management 	
	ID/data layer		<ul style="list-style-type: none"> • Data of set items 	
	Data link/PF layer		<ul style="list-style-type: none"> • Integration, data linkage 	
	Device/infrastructure layer	<ul style="list-style-type: none"> • smartphone/telecom network 		

: Data that should certainly have been acquired
 : Data that should have been or could have been acquired

18 Measure volume of waste in container using laser scanner

Analyze containers filled with waste being brought into port using laser scanner to measure types and volume of contents

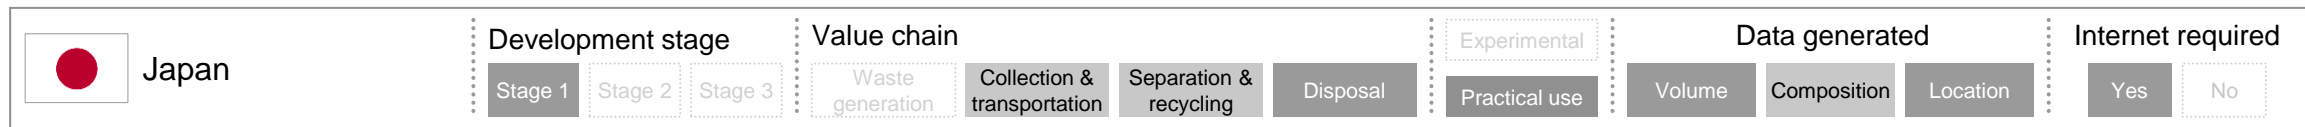

Details of digital solution use		Outcome	Opinion on use	
Providers	CLEVER VOLUME	Improve efficiency of port inspections by estimating waste volume, types using laser scanner 	<ul style="list-style-type: none"> • Could be applied if configuration of collection vehicles is the same as vehicles bring waste into port • Could make creation of data on volume carried in from disposal site more efficient 	
Use case initiatives	<ul style="list-style-type: none"> • Cloud-based volume measurement solution • Use laser scanner to estimate types and volume of waste brought into port in containers 			
Digital tech used/data used	<ul style="list-style-type: none"> • Laser scanning tech
