

The Project for Strengthening Capacity for Maintenance of Roads and Bridges
Project News (January, 2016)

Pilot Project for Bridge Repair Work

Pilot project for bridge repair work was started in Phnom Penh DPWT and Kandal DPWT from 25th January.

JICA Expert Team introduced the crack injection method to Cambodia as one of bridge repair method.

In pilot project, not only technical method but also safety management have been instructed from JICA Expert Team to trainees from Phnom Penh DPWT and Kandal DPWT. (Photo 1-3)

In beginning of pilot project, JICA Expert Team made a demonstration of crack injection method and instructed variety points of attention of the method. And then, officials of RID and DPWT executed the injection method to actual concrete crack. (Photo 4-5)

Report of pilot project has been posted in Facebook page of RID to inform the public of the Project. (Photo 6)
