Project News (June, 2016)*

Preparation of bridge maintenance plan for next 3 years

Ministry of Public Works and Transport (MPWT) executed the national bridge survey in 2015 under assistance by JICA expert team. The survey results and inventories were encoded in the national bridge database system which covers all 25 provinces of 1 to 4 digits roads, total 2355 br.. Using the database, serious damaged bridges (SD) and damaged bridges (D) were extracted. Bridge maintenance plan for next 3 years were drafted including calculation of required cost for repair and inspection.

JICA expert team conducted the training for database operation for MPWT to obtain required skill and knowledge for periodical update and use of database system.

Sample of use of database : Number of bridges by province

Activity: Database training
