

The Project for Strengthening Capacity for Maintenance of Roads and Bridges
Project News (November, 2016)

Training in Japan the 2nd

Five engineers who are in charge of bridge maintenance from Ministry of Public Works and Transport and two officials from Ministry of Economy and Finance in charge of infrastructure maintenance came to Japan for the training of bridge maintenance of Japan.

The trainings were conducted in Tokyo, Osaka, Ehime and Nigata with lectures and On the Job Training. Innovative material which is planned to use in Cambodia as pilot project is also presented in the training program. One of most attractive program was the intensive maintenance with full stop of the traffic on the expressway and bridge inspection training using bridge checker vehicle on the high elevated location.

All the lecture and training would contribute to improvement of the maintenance in Cambodia. The trainees are expected to transfer their knowledge to their colleagues when they come back to the country.

Lecture

Observation of the maintenance with full stop traffic
