

SUSFORM-NOW (LDC) News No2 **A trial to introduce improved**

A trial to introduce improved stoves was started at three villages (Tia Ghenh C and Huoi Mua A in Dien Bien Dong District and Sai Luong in Dien Bien District) on November 19, 2011.

Tia Ghenh C

Fuel-wood was put together in bundles, 5 kg each for the trial. By counting the number of bundles used each day, a daily fuel-wood consumption can be identified and compared with the previous use to estimate the savable amount of fuel-wood. ↓

SUSFORM-NOW (LDC) staff is explaining how to fill in the monitoring sheet.

Improved stoves are expected to contribute to reduction of use of fuel-wood by enhancing fuel efficiencies.

On November 19, 2011, SUSFORM-NOW (LDC) introduced several types of cooking stoves at the three villages and requested five households at each village, that volunteered to use stoves, to record a daily use of fuel wood in the coming month.

Through this trial, SUSFORM-NOW (LDC) would like to identify appropriate types of stoves that the people are willing to adopt at the pilot sites.

If you live in the pilot sites of SUSFORM-NOW and are interested in the trial use of improved cooking stoves, please contact us for more details.
