Triangles and Quadrilaterals

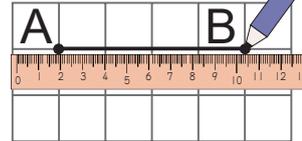

Straight Lines

Instruction How to draw a straight line using a ruler

1. Place and hold the ruler under the two points.

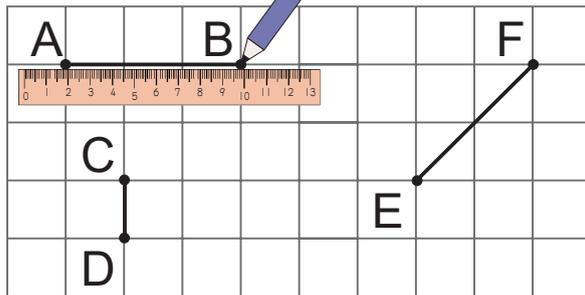

2. Draw a line to connect the two points.

Example Bound the following pair of points to draw lines by using a ruler.

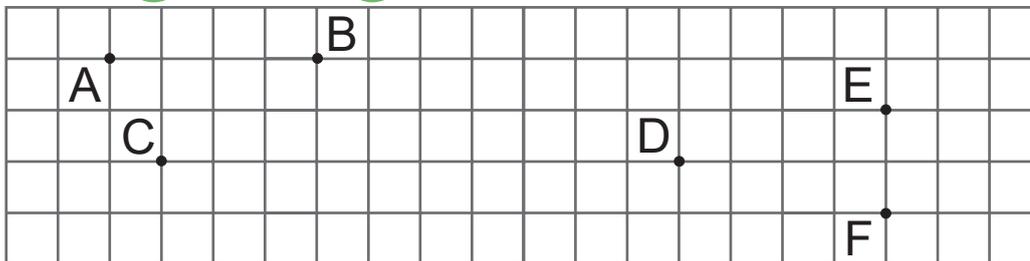

1 AB 2 CD 3 EF

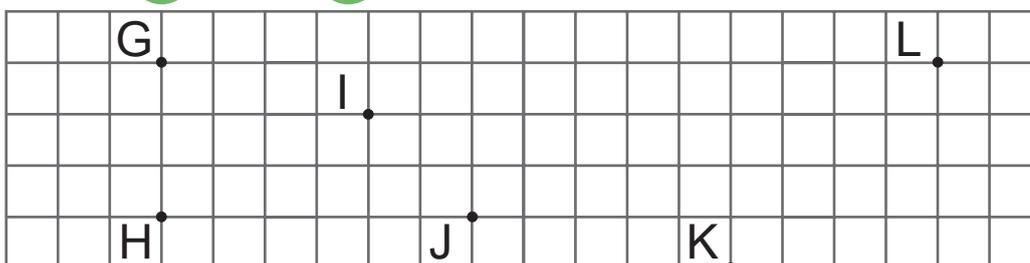

When you draw a straight line, make sure to press the ruler firmly.

Bound the following pair of points to draw lines by using a ruler.

1 AB 2 CD 3 EF

Triangles and Quadrilaterals

Finding Triangles and Quadrilaterals

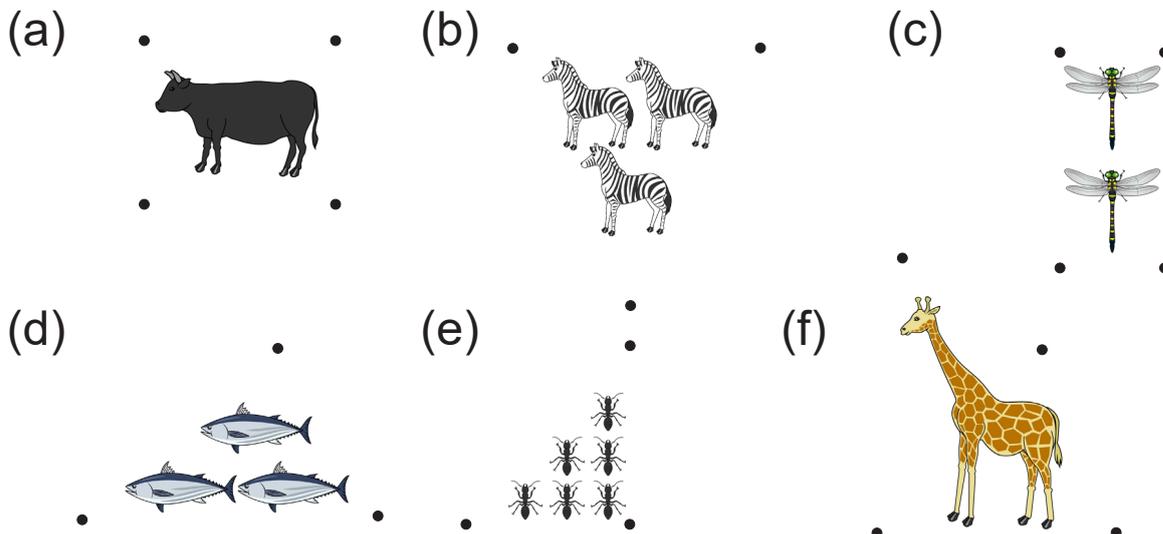

Example Connect the dots to enclose the same animals into groups. Separate the resulting shapes into two groups.

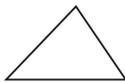

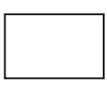

Group of  (a) and 

Group of  (b) and 

Connect the dots to enclose the same animals into groups. Separate the resulting shapes into two groups.

Group of , , , and 

Group of , , , and 

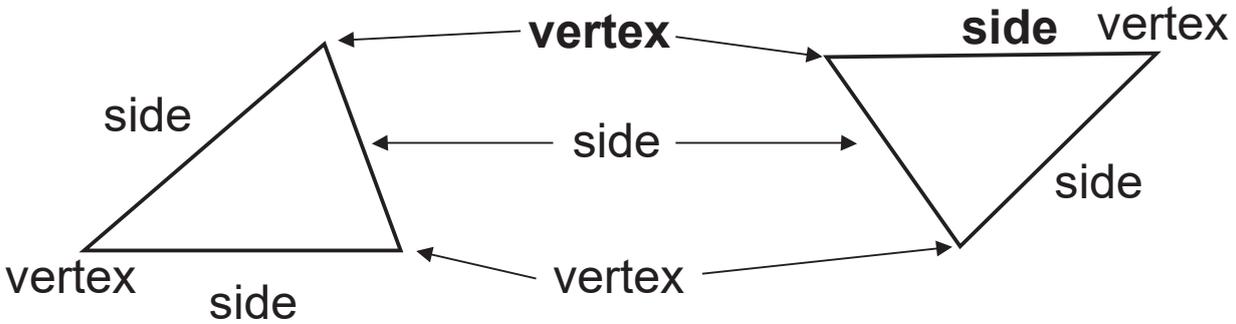

- A closed shape made of three straight lines is called a **triangle**.
- A closed shape made of four straight lines is called a **quadrilateral**.

9 - 3

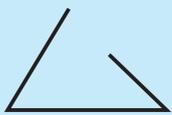

Triangles and Quadrilaterals

Triangles

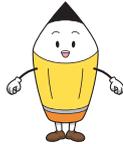

Instruction Triangles

- Each straight line that makes a triangle is called a side.
- Each point where the sides meet is called a vertex.
- Triangles have 3 sides and 3 vertices.

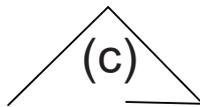

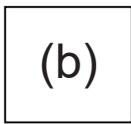

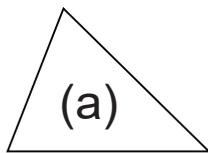

It's not triangle.

Example Answer the following questions.

1 How many vertexes does a triangle have?

2 Find the triangles.

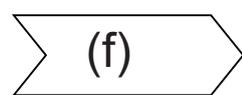

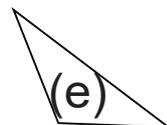

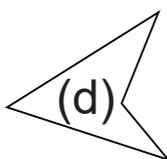

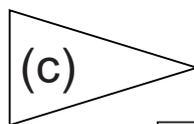

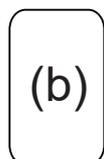

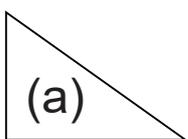

3 vertexes.

(a) is triangle.

1 How many sides and vertexes do triangles have?

Triangles have sides and vertexes.

2 Find the triangles.

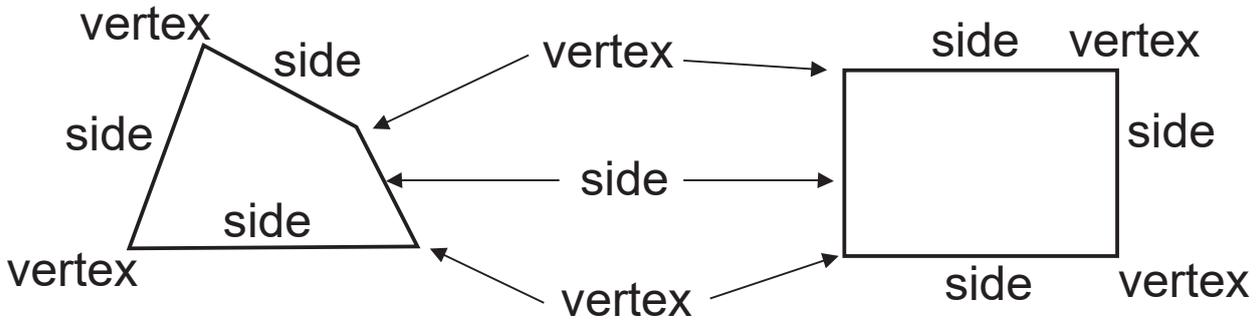

are triangles.

9 - 4

Triangles and Quadrilaterals

Quadrilaterals

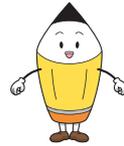

Instruction Quadrilaterals

Quadrilaterals have 4 sides and 4 vertices.

This is not a quadrilateral.

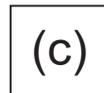

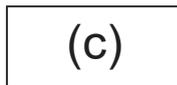

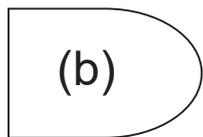

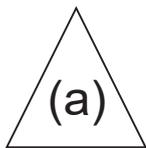

Example Answer the following questions.

1 How many vertexes does a quadrilateral have?

2 Find the quadrilaterals.

4 vertexes.

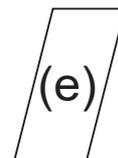

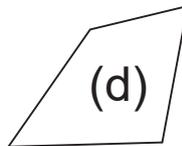

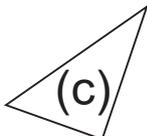

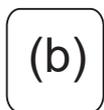

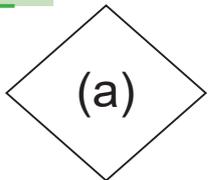

(c) is quadrilateral.

1 How many sides and vertexes do quadrilaterals have?

Quadrilaterals have sides and vertexes.

2 Find the quadrilaterals.

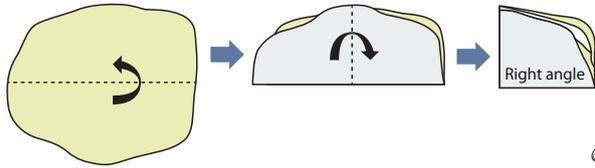

are quadrilaterals.

9 - 5

Triangles and Quadrilaterals

Right Angle

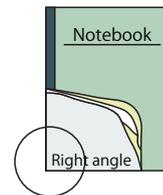

Instruction Make a right angle by folding a piece of paper.

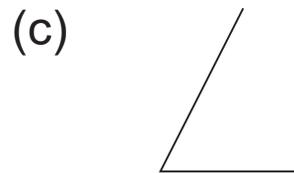

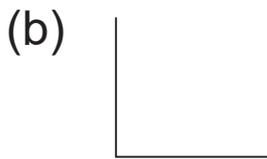

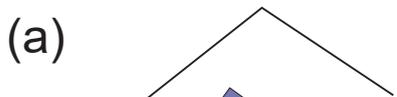

The shape of the corner that is made by folding paper is called a **right angle**.

See if the shape of the corner of your notebook has a right angle.

Place the paper onto the corner of your notebook to check if they are the same as each other.

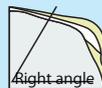

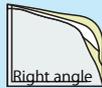

Example Which of the following has a right angle? Find a right angle by placing the folded paper.

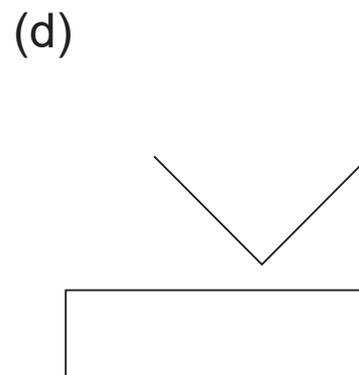

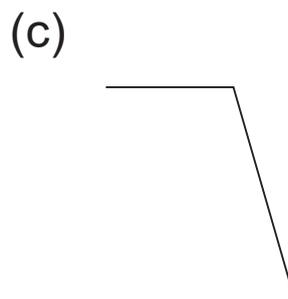

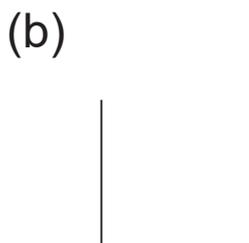

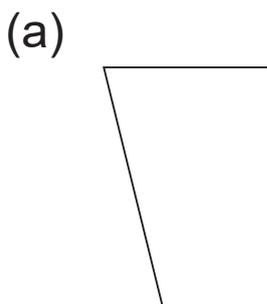

(b) has a right angle.

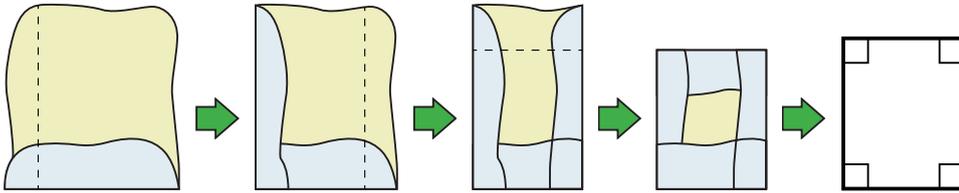

Place the folded paper onto the shape and check if they match each other or not.

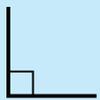

Which of the following is a right angle? Find a right angle by placing the folded paper.

Instruction Make a rectangle by folding a piece of paper.

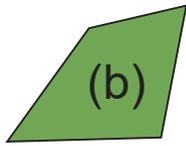

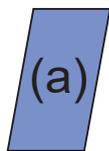

A quadrilateral with four right angles is called **rectangle**.

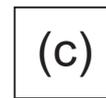

This mark indicates a right angle.

Example 1 Find the rectangle.

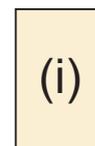

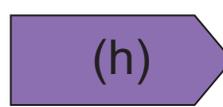

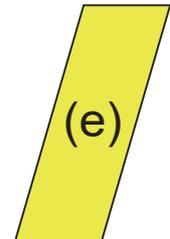

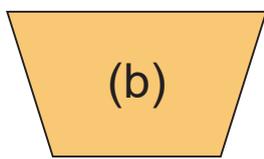

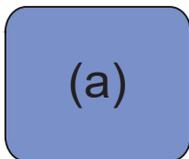

How many right angles do they have?

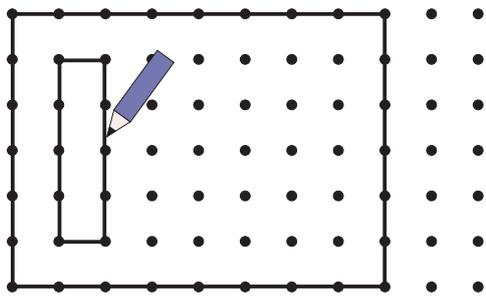

(c) is rectangle.

1 Find the rectangles.

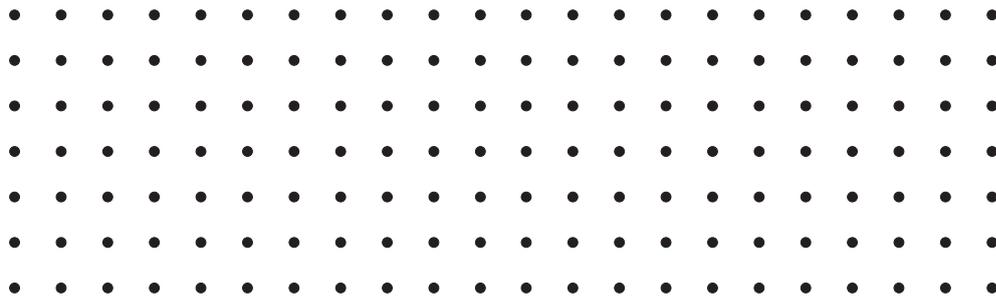

are rectangles.

Example 2 Draw 2 rectangles by connecting the dots.

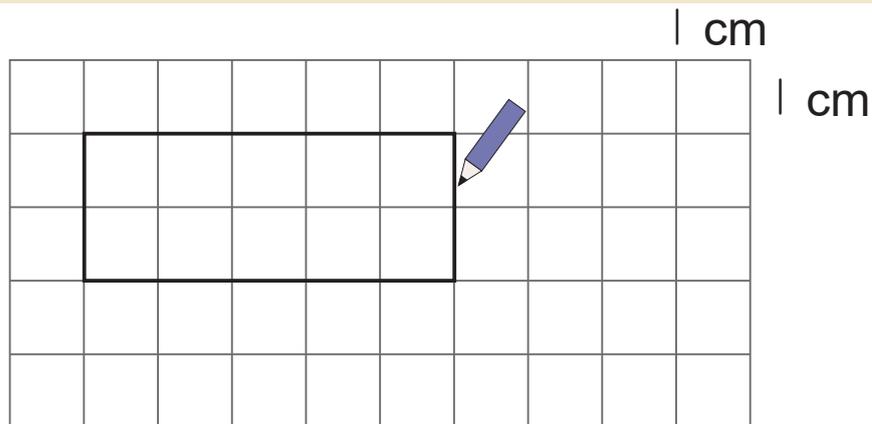

You can also draw a rectangle inside of another one.
The answer is not one.

2 Draw as many rectangles as possible by connecting the dots.

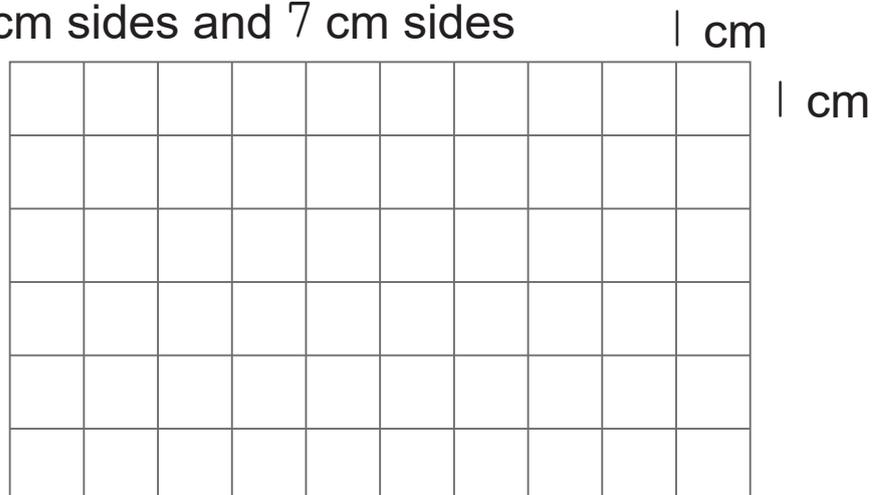

Example 3 Draw a rectangle with 5 cm sides and 2 cm sides.

3 Draw the following rectangles.

1 with 2 cm sides and 3 cm sides

2 with 3 cm sides and 7 cm sides

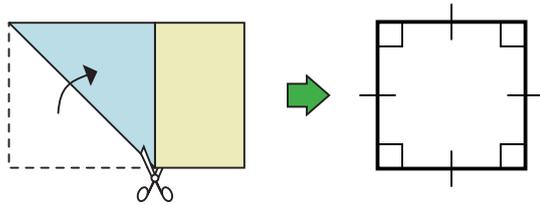

9 - 7

Triangles and Quadrilaterals

Squares

Instruction Make a square by folding and cutting a piece of paper.

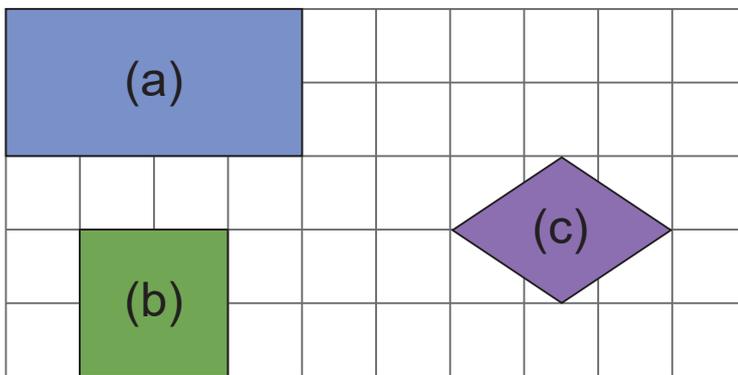

Fold a rectangular paper and cut it like above.
The mark indicates the lines are the same length

A quadrilateral with four right angles and four equal sides is called a **square**.

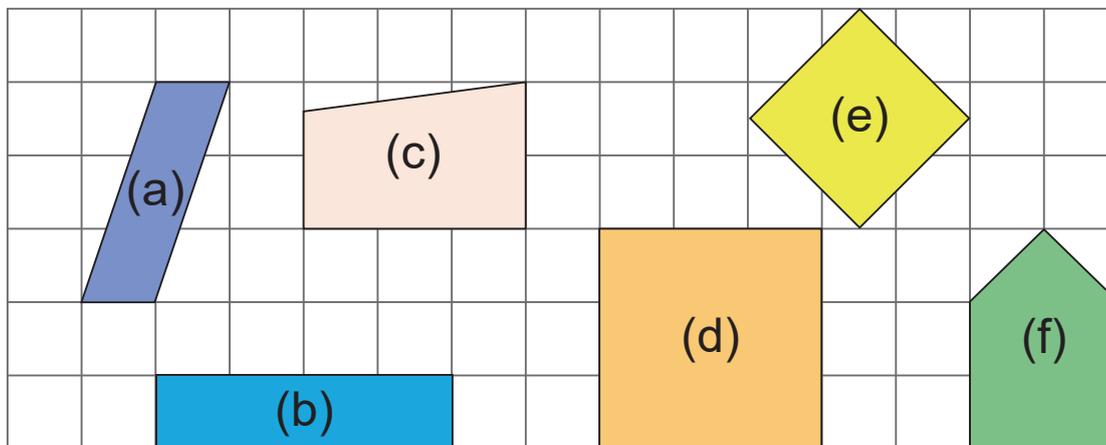

Example 1 Find the square.

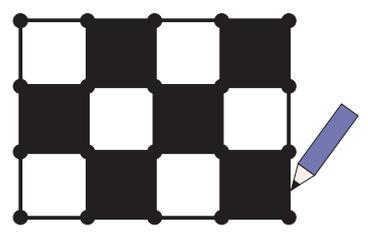

(b) is square.

1 Find the square.

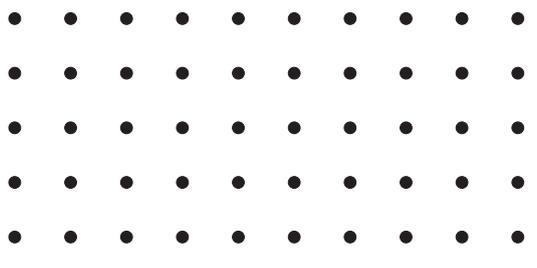

are squares.

Example 2 Make a patterns by drawing  and .

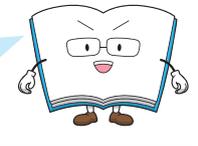

This pattern is made by alternating black and white. But, the answer is not one.

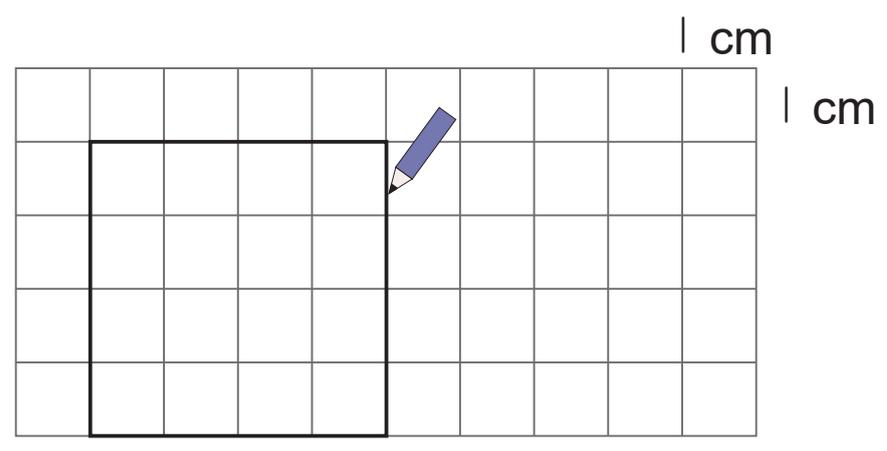

2 Make a patterns by drawing  and .

The answer is not one. Let's take a look at the patterns made by friends.

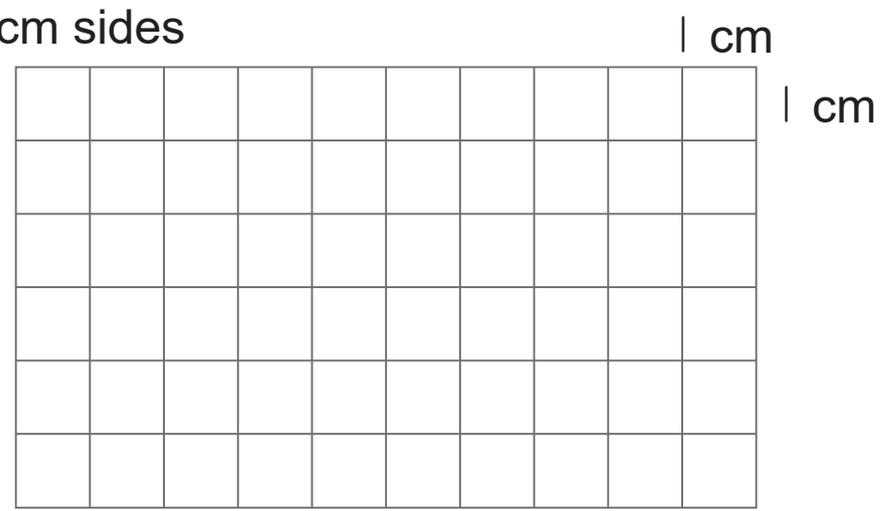

Example 3 Draw a square with 4 cm sides.

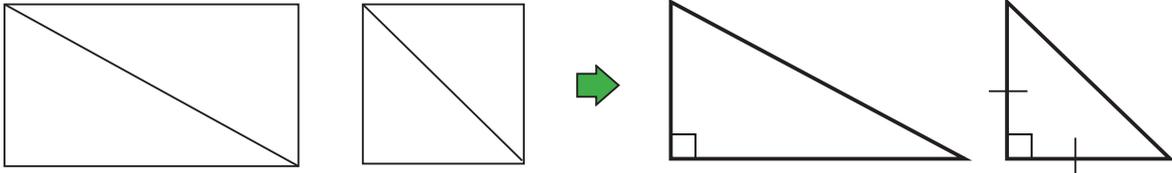

3 Draw the following squares.

- 1** with 2 cm sides
- 2** with 3 cm sides
- 3** with 6 cm sides

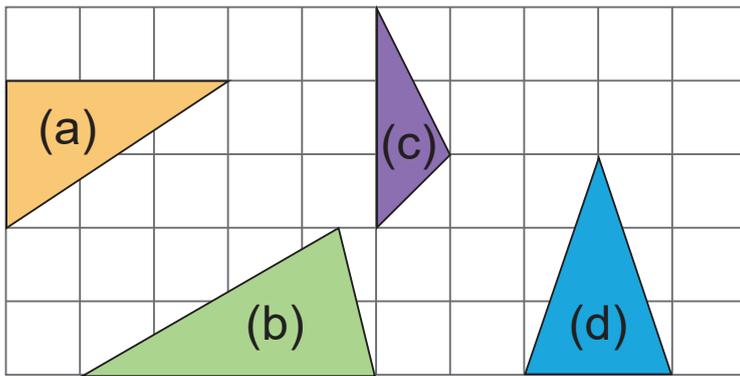

Instruction What is a right triangle?

A triangle with one right angle is called a **right triangle**.

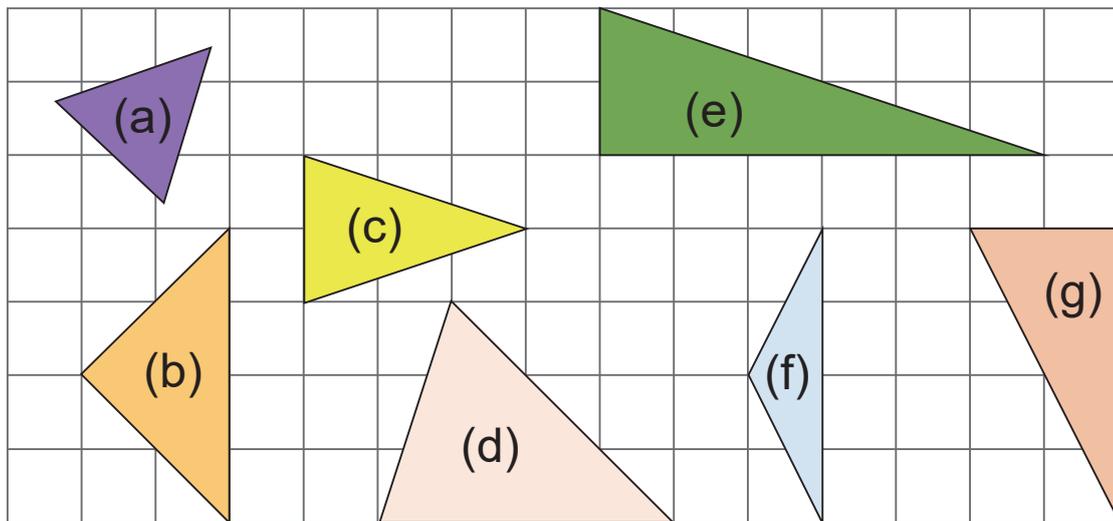

Example 1 Find right triangle.

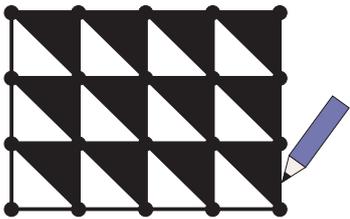

(a) is right triangle

1 Find right triangles.

are right triangles.

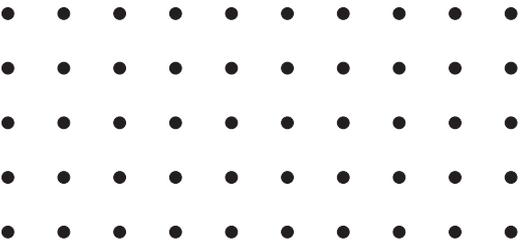

Example 2 Make a patterns by drawing  and .

The answer is not one.
Let's take a look at the patterns made by friends.

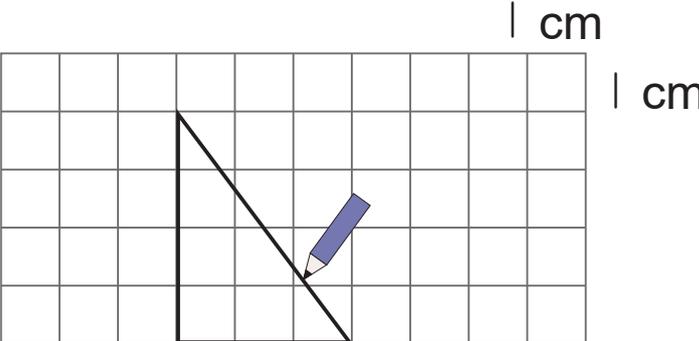

2 Make a patterns by drawing  and .

The answer is not one.
Let's take a look at the patterns made by friends.

Example 3 Draw a right triangle with 4 cm and 3 cm sides that form a right angle.

3 Draw right triangles with the following sides that form a right angle.

- 1** with 4 cm and 4 cm sides that form a right angle
- 2** with 2 cm and 5 cm sides
- 3** with 3 cm and 6 cm sides

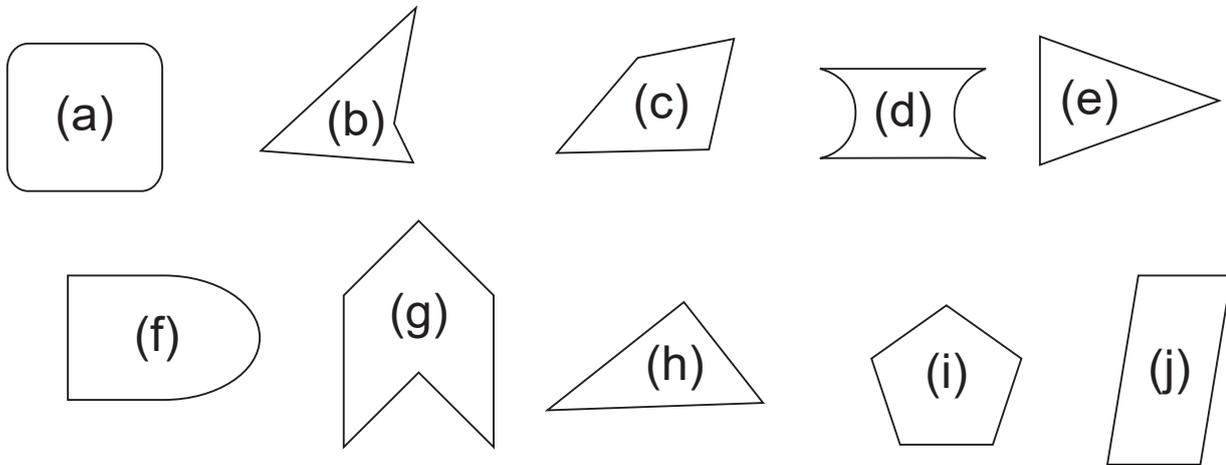

1 How many sides and vertexes do triangles and quadrilaterals have?

Triangles have sides and vertexes.

Quadrilaterals have sides and vertexes.

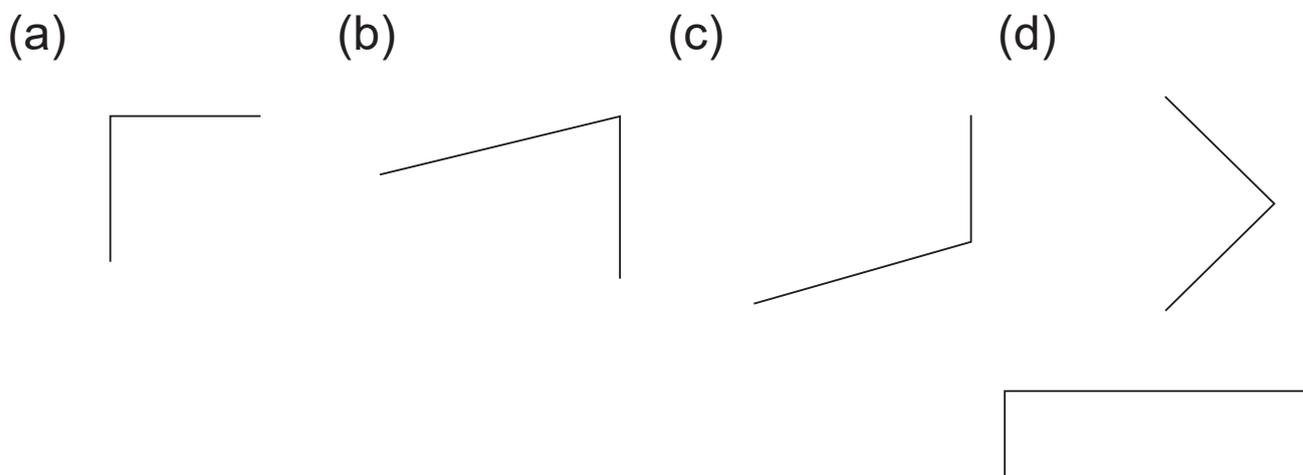

2 Find the triangles and the quadrilaterals.

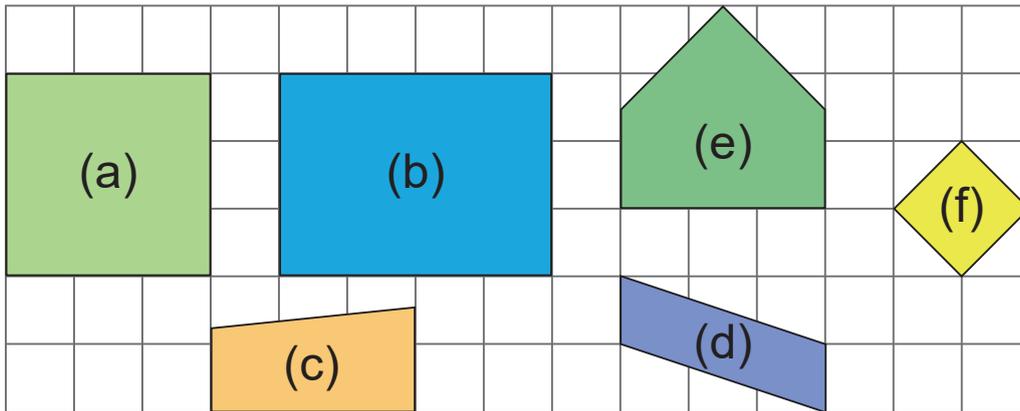

Triangles are

Quadrilaterals are

3 Which of the following is a right angle?

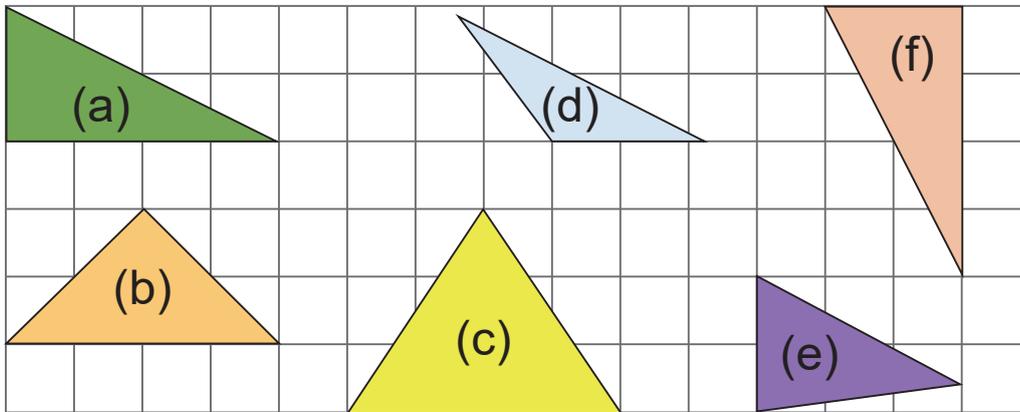

4 Find the square.

are square.

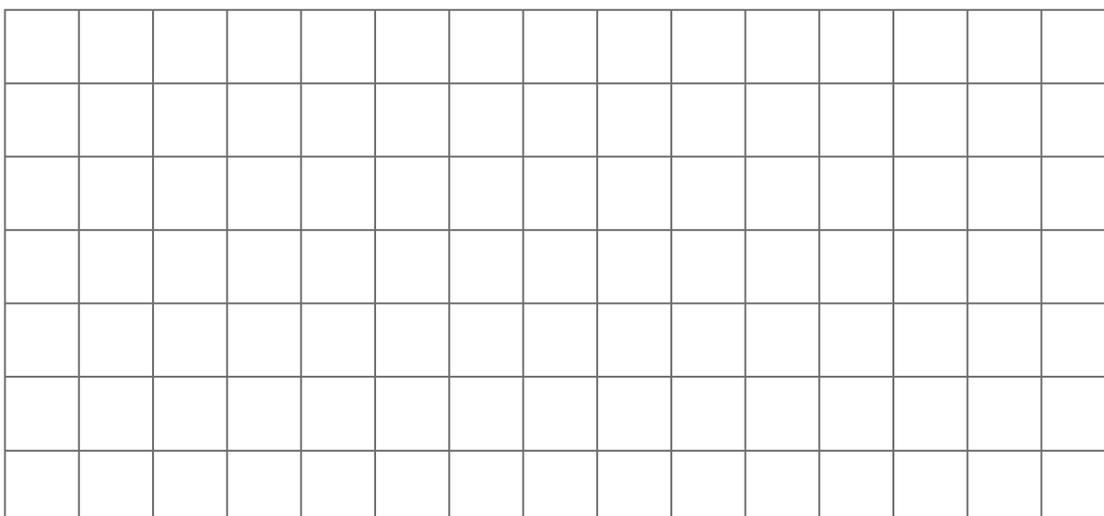

5 Find the right triangles.

are right triangles.

6 Draw the following shapes on the grid below.

- 1** A rectangle with 2 cm sides and 4 cm sides.
- 2** A square with 4 cm sides.
- 3** A right triangle with 2 cm and 6 cm sides that form a right angle.

1 cm
