

FINAL REPORT

PERU: Country Gender Profile

January 2007

THE ELEVENTH STATE POLICY¹

Promotion of equal opportunities without discrimination

“We commit to provide effective priority to the promotion of equal opportunities, recognizing that in our country there are diverse discrimination and social unfairness expressions, particularly against women, children, senior citizens, persons who are members of ethnic communities, the disabled and the persons without sustenance, among others. The reduction and subsequent eradication of these inequality expressions temporarily require affirmative actions on the part of the State and society, applying policies and establishing mechanisms oriented to guarantee equal economic, social and political opportunities for the entire population.

With this objective, the State: (a) will fight all forms of discrimination, promoting equal opportunities; (b) will strengthen the participation of women as social and political subjects that dialogue and work with the State and the civil society; (c) will strengthen an institution to the highest level of the State under their policy and program governing role for the promotion of equal opportunities among men and women, that is, gender equity; (d) will provide fair access to women to productive resources and employment; (e) will develop systems that will allow to protect children, adolescents, senior citizens, women head of households, persons without sustenance, persons with disabilities and other discriminated or excluded persons; and (f) will promote and protect the rights of discriminated ethnic community members, impelling social development programs that will favour them integrally.”

¹ National Agreement, July 22, 2002. The State policies of the National Agreement express an important qualitative progress in the consensual construction of the Peruvian State that go beyond the action and term of a government. The National Agreement aims to be a medium and long term strategic orientator both of the public action as well as of the society organizations.

LAW N° 27660 WHICH STATES OF PRIORITY THE INTEGRAL HEALTH INSURANCE FOR MEMBERS OF GRASSROOTS ORGANIZATIONS AND WAWA WASIS		It proposes the launching of a free maternal and child health insurance on behalf of women engaged in Mothers Clubs Organizations, Kitchen and Spoon Services, Milk Programs, Community Organizations, Wawa Wasis and other grass root organizations, as well as their small children.			February 7 th 2002		
LAW N° 27734 WHICH MODIFIES SEVERAL ARTICLES OF LAW 26864 ON MUNICIPAL		It proposes the substitution of numeral 2 of article 10th of Law 26864, Municipal Elections which refers to increase the political participation of women in municipal elections. Also, proposes to include a gender share/quota and alternation in the electoral lists of political parties and organizations.			May 28th, 2002		

ELECTIONS			
STATUTORY LAW N° 27972 OF MUNICIPALITIES	It proposes the modification of section 3 of article 10th of Law 26864, Law of Municipal Elections, which refers to the alternation of gender in the list of candidates to town councilors in municipal elections, thus increasing women political participation.	May 27th 2003	
LAW N° 27982 THAT MODIFIES A TEXT OF LAW N° 26260 "LAW OF PROTECTION AGAINST FAMILY VIOLENCE"	It proposes modifying of the article 13° of the Law N° 26260, Law of Protection Against Family Violence, which refers to the accomplishment of a Hearing of Conciliation between the aggressor and the victim, which will have to be carried out by Provincial public prosecutor of Family affairs, in a no greater term of 15 calendar days. It also proposes to incorporate the modality of physical, psychological and sexual violence to the Law N° 26260; and to authorize the National Police to detain the aggressor in family violence cases. It also proposes to establish the non application of abandonment in the judicial processes related to family violence.	May 29th, 2003	
LAW N° 28048 WHICH PROTECTS EXPECTING MOTHERS FROM LABOR ACTIVITIES WHICH COULD JEOPARDIZE THEIR HEALTH AND/OR THE NORMAL EVOLUTION OF THE EMBRYO AND FETUS.	It proposes to protect expecting working mothers from labor activities which could be dangerous for the normal development of the fetus during pregnancy.	July 31 st , 2003	
LAW N° 28236 THAT CREATES HOMES OF TEMPORARY REFUGE VICTIMS OF FAMILY VIOLENCE	It proposes the launching of temporary homes for women, old people and children victims of family violence.	May 28th, 2004	
LAW N° 28243 WHICH EXTENDS AND MODIFIES LAW N° 26626, ON IHV/AIDS AND ALL SEXUALLY TRANSMITTED DESEASES.	It proposes to declare mandatory the detection of IHV/AIDS on every pregnant woman.	May 31 st , 2004	
LAW N° 28314 WHICH STIPULATES FLOUR FORTIFICATION WITH MICRO NUTRIENTS	It proposes to make mandatory to consume folico acid, in all the women in age to procreate.	August 4th, 2004	
LAW N° 28308 THAT REGULATES THE USE OF	It proposes to establish prenatal and childbirth leave for the female personnel in the Army and Police.	July 29th, 2004	

PRENATAL AND CHILDBIRTH LEAVE OF THE FEMALE PERSONNEL OF THE ARMY FORCES AND PERUVIAN NATIONAL POLICE			
LAW N° 28542 THAT STRENGTHENS FAMILY UNIT	It proposes to grant competition in the matter of family to the Ministry of the Woman and Social Development.	June 15 th , 2005	
LAW N° 28867 THAT MODIFIES ARTICLE 323 OF LEGAL SYSTEM	Proposes to modify article 323 of the Legal system, which refers to the sanction by discrimination, because of origin, filiation, race, gender, genetic characteristics, sexual orientation, language, religion, opinion, economic condition, handicapped, age. 2. General Situation of Women and Government Policy on Gender

2-1 General Situation of Women

Peru has improved its gender equity conditions, however at a very relative level in the last years. With a Gender Development Index (GDI) of 0,745, Peru is positioned at the level of a medium GDI country, and in the 67th place out of 177 countries, while under the Human Development Index (HDI) it is located in number 82nd out of 177 countries.

UNDP: Human Development Report

According to the UNDP data, the life expectancy of the Peruvian woman at birth was placed in 2004 in 73 years against 68 in the case of men; 82.1% female literacy rate against 93.5% in the case of men; 88% of combined gross enrolment ration (for primary, secondary and tertiary schools) in the case of women versus 85% men.

The largest gap can be observed at the economic level of income, since while women income is approximately US\$3,294 annually, in the case of men it is US\$8,036 annually, this would reflect, that in average, women in the country receive income that only represents 27% of what men make. Please note that even though the indicator has relatively improved, this improvement has been achieved at a lower speed in the last years.²

Complementary and alternative evaluations about the status of gender equity are those provided under reports such as World Economic Forum and Social Watch Organization.

The World Economic Forum, in their report Women Empowerment Measure, the Global Gender Gap (2005) evaluates empowerment, the opportunities and

² UN Human Development Index, Human Development Report, 2006 pp 364

gender gaps in 58 countries on 5 dimensions: a) economic participation, b) economic opportunity, c) empowerment in politics, d) school attendance and e) health and wellbeing. This study that is based on UNIFEM findings on lack of equity among men and women indicates that Peru has an average index of 3.4 out of a total of 7, located at slot 47 and classifies it as a country with low medium or medium high gender equity gap. With regard to economic participation³ it is located 50, in economic opportunities⁴ 44, in political empowerment⁵ 38, in school attendance⁶ 47, and health and wellbeing⁷ 31.

Recently, the Social Watch Organization has developed a gender measurement methodology, alternative to the UNDP gender development index (GDI), aiming to measure effectively the level of equity or inequity, separating the effect of the population socioeconomic development that the GDI considers as of the estimated economic income and life expectancy. Under this concept, the Gender Equity Index (GEI) appears and its dimensions are: a) educational (illiteracy gap and grade school, high school and superior among women and men) and b) empowerment (% of professional and technical women in the government, decision making positions at ministerial level, number of legislators and seats). For the case of Peru the Gender Equity Index is 8 (Year 2005), for a range that goes from 3 (less equity) up to 12 (more equity) and this classifies it as a country with medium low gender equity⁸.

The role of women is fundamental in the efforts of our countries to overcome poverty⁹. With regard to the capacity of the mothers to cover children health conditions, the World Bank indicates¹⁰ that an additional educational year of the mother reduces up to 9% the infant mortality rate and between 5-10% of the children mortality. In the case of mothers with a high school degree or more, the infant and children mortality rate is reduced to a minimum.¹¹

The development of women capacities and mainly that of girls is directly aimed to break the poverty intergenerational transmission.¹² For example, the

³ The ratio (female unemployment/male unemployment), the ratio (young women unemployment/young men unemployment), the ratio (women economic income/men economic income), the ratio (women economic activity rate/ men economic activity rate), and equity in salaries and/or remunerations between men and women for the same type of work are measured.

⁴ Basically no margination due to pregnancy is measured as well as the existence of care modalities for the children provided by the government that would make possible for the mothers to work.

⁵ Women participation in State positions is measured, such as the Presidency, Prime Minister, Cabinet of Ministers, Legislative Power.

⁶ The ratio (women average schooling year/ men average schooling years), the ratio (women primary, high school and college attendance/ men primary, high school and college attendance), the ratio (women illiteracy/men illiteracy) are measured.

⁷ Births assisted by qualified personnel, adolescent fertility rate, mother mortality ratio, infant mortality ratio, effectiveness of the government efforts to reduce poverty and lack of equity are measured

⁸ Social Watch Sofia 2006, Informe del Secretariado Internacional, de Beirut a Sofia, Pg 6

⁹ The development of women capacities has to be understood throughout the life etareo cyle. Kofi Annan, the United National Secretary General correctly indicates that "there is no more effective instrument for development than girl education". Mieko Nishimizu, former World Bank Vice President said that "if you educate a child you are educating a human being, but when you educate a girl, you are educating several generations".

¹⁰ World Bank (1995), An Examination to Education

¹¹ Rivera, León (2006), "Importance of maternal education to reduce infant and child mortality", in Ruiz-Bravo, Patricia and José Luis Rosales, Gender and the Millennium Goals, UNDP-UNIFEM-UNFPA.

¹² Sen Amartya K. and Gro Harlem Brundtland (1999), Breaking the poverty cycle. Investment in infants.

development of capacities in mothers has effects such as improvement of economic opportunities, more female labour participation, provides better care and nutrition to their children and contributes to the reduction of income injustice given the role of head of household in countries under development¹³.

Entities, such as the Instituto Internacional de Investigación en Políticas Alimentarias (IFPRI) has prepared estimations as to the factors that would have contributed to infant acute malnutrition reduction (weight according to age) at world level between 1970 and 1995. A study detected that the women educational level contributes by 43% in total infant malnutrition reduction. With regard to food security, another proven element is the highest propensity of women to use their economic income towards basic family expenses, among them, food¹⁴. These are important arguments to expand women economic opportunities in a gender equity context and decent and dignified employment¹⁵.

Source: Smith L. and Haddad L. Overcoming child malnutrition in developing countries, past achievements and future choices. International Food Policy Research Institute. Washington DC 2000

Gender equity in economic, social and political processes is fundamental both to guarantee their rights as human beings, as well as to favour inclusion and development virtuous circles for the society as a whole. In Peru the panorama of poverty and inclusion is larger in the case of women in the rural areas. This is not a given in spite of the multiplicity of positive impacts in the economic, social and political at the level of the society, derived from women capacity development.

¹³ InterAmerican Development Bank (IDB) (1999), Report on Economic and Social Progress in Latin America: The Inequality; UNICEF (1999), The progress of nations; UNDP (2003), Human Development Report

¹⁴ It implies that in the case of women, there is a lower ratio between economic income and access to food.

¹⁵ UNIFEM (United Nations Development Fund for Women), Women Progress in the World, 2005.

Peru has a great challenge to reach the Millennium Development Goals(MDG) towards 2015 and these can only be achieved if changes are effective in the capacity and empowerment of women.

Main challenges of gender equity under the frame of the Millennium Development Goals¹⁶.
With regard to Objective 1, about <i>extreme poverty and hunger reduction</i> , the following are highlighted:
<ul style="list-style-type: none"> • Inequality in the labour market that limits the income contribution of women to the households, beyond the educational level. It is evidenced by a gap between the income of men and women, even with the same years of education.
<ul style="list-style-type: none"> • Another element that has to do with the high percentage of women who work and do not get pay who are more than a third. This phenomenon of excessive dependency and precautionsness is present more frequently in the rural areas. Poverty in women is expressed in that they work more and get paid less, which is paradoxical inasmuch as they are those who devote a larger percentage of their income towards the basic needs and feeding.
<ul style="list-style-type: none"> • With regard to feeding, the high levels of anemia in pregnant and nursing women are a concern, because even when it is not directly correlated with children anemia, it does affect the cognitive capacity and the labour performance of women, including in relation with probable maternal mortality.
<ul style="list-style-type: none"> • Chronic infant malnutrition is not explicitly considered as a MDG - global malnutrition is instead – not too relevant for the Peruvian environment. Chronic infant malnutrition has not been reduced since 10 years ago and its effects and damages are to a certain extent irreversible. The State policies and programs and MIMDES, specifically, are not generating positive results in the reduction of chronic infant malnutrition. Experiences such as the pilot project for the reform of the current PRONAA nutritional programs grow in expectations to innovate intervention- under a decentralized frame- with more effectiveness than the current.
With regard to Objective 2, about <i>primary education universalization</i> , the following are highlighted:
<ul style="list-style-type: none"> • Even though primary education universalization may have been reached, with regard to registration, desertion starts in primary schools. For the year 2000, according to CEPAL data, 10% of the women deserted during primary and it went up by 24.4% in the rural area. The main reason for school drop outs is economic and the lack of family income.
<ul style="list-style-type: none"> • The required knowledge stock for economic insertion and employment opportunities do not reduce to primary. Total and female desertion is higher in high school and in college.
With regard to Objective 3, concerning <i>equal opportunities and gender equity</i> , the following are highlighted:
<ul style="list-style-type: none"> • A relatively lower proportion of 14 year old girls than boys have completed six years of schooling.
<ul style="list-style-type: none"> • School desertion in the case of rural girls during primary education is by far higher than those of the boys.
<ul style="list-style-type: none"> • School attendance in the case of girls in high school is also lower, particularly among the poor population.

¹⁶ On this respect we have used Bravo, Rosa (2004), *Goals of the Millennium and Gender Equity: The Peruvian Case*. Women and Development Series, Santiago, May.

With regard to Objective 4, about *infant mortality*, the following are highlighted:

- The infant mortality reduction goal would be accomplished, if just the education factor is considered, when women reach high school education. The largest fertility expressed in the birth order also has influence in the infant mortality reduction. The educational factor favours more or less infant mortality. Women without education have a 4 times higher risk that their children under 5 years old will die than those women with college education.

With regard to objective 5, about *maternal mortality*, the following are highlighted:

- The goal to reduce maternal mortality, in addition to being influenced by material conditions, is also associated with the high fertility of the poorest, less educated women who live in rural areas.
- The evidence indicates that it is not enough to increase health units and even to increase pre-natal specialized care. Institutional births require to continue growing, but with intercultural strategies and methods that the women will trust, mainly in the rural areas.

With regard to Objective 6, about *IHV and sexual transmitted diseases*, the following are highlighted:

- Reduction in the number of IHV/AIDS reported cases between 1997 and 2000 has been much more significant in the case of men than in the case of women.
- The knowledge and use of the masculine condom among Peruvian women is much lower in the case of women without education than those with college education.
- The occurrence of IHV cases in monogamous women force to think about the familiar context of trust among couples and the consequent strengthening of the family planning programs.

2-2 Government Policy on Gender

Under the guidance of the Ministry of Woman and Social Development (MIMDES), the government of Peru aims to build gender equity conditions¹⁷ under an integral perspective of social, economic, cultural and political rights with the application of the Equal Opportunity Plan (EOP) 2000-2005 and its new version 2006-2010. The EOP in this manner will contribute to the MDG Objective 3 “to promote gender equity and women autonomy”. The EOP general objective is to promote and guarantee equal treatment and opportunities¹⁸ for women, propitiating their full participation in the development and benefits thereof, throughout their life cycle.

For MIMDES, gender equity constitutes a strategic approach to overcome poverty and exclusion in the country. Under this frame, equal opportunities represent the way to reach gender equity and the operational strategy to achieve it is given in all the action and incidence levels, starting with the family, the local, regional and national level. Their approaches reflect a necessary positive discrimination and gender transverseness in the policies and actions of the Sector, and the production and social sectors. As a current referential frame they have three National Plans: *Equal Opportunities among Men and Women –EOP 2006-2010, Against Violence to Women and the National Family Support Plan*.

Equal Opportunities among Men and Women Plan–EOP 2006-2010

Strategic Foundations	
Policy Guidelines	Strategic Objectives
1. To institutionalize and transverse the perspective of gender equity (equal opportunities among women and men) in public policies, national plans and State practices.	The State incorporates the gender equity perspective in a sustainable fashion in the design of their policies and their program management.
2. To promote in the society the adoption of equitable values, practices, attitudes and behaviours among men and women, to guarantee the right to not discriminate towards women.	The State and the Civil Society adopt equitable practices among women and men in all the social environments. The State and the civil society contribute to the improvement of relations among women and men under the frame of a peace culture and violence free life.
3. To guarantee full exercise of the social and cultural rights for women.	To guarantee equitable access for women and men to quality social and cultural

¹⁷ Concept defined as “Governing Principle of human development that orients economic process toward equal rights, responsibilities and provides access to wellbeing opportunities to women and men, recognizing the priority of promoting full empowerment of women as active local development subjects because of the existence of material and cultural conditions that prevent their positioning in equal rights and opportunities.” Guidelines for Local Policy and Management Plan to promote Women Economic Empowerment/ Freyre Valladolid, Mayela: MIMDES. Lima, 2006.

¹⁸ Concept defined as “condition of equity and social inclusion that promotes equal access for men and women to rights and opportunities of economic, social and cultural wellbeing. Public policy oriented to the reduction of social unfairness based on gender discrimination situations”. Id. Note 8.

	services.
4. To guarantee full exercise of the women economic rights	Women and men access, remain and develop themselves in the labour market with gender equity and equal opportunities and receive equal remuneration and social benefits for work of the same value.
5. To guarantee full exercise of the civil and political rights of women and the equitable access to power and decision making instances.	Women and men fully exercise their civil, political and citizenship rights.

Against Violence to Women National Plan

Strategic Objectives
a. To promote changes in the socio-cultural patterns that tolerate, legitimate or exacerbate violence towards women in its different manifestations and spaces.
b. To implement mechanisms, instruments and procedures to prevent, protect, care for, recover and repair in a timely and efficient manner women who have suffered violence, considering the different cultural and geographical realities of the country.
c. To establish a system to provide certain, current and quality information about the causes, consequences and frequency of violence toward women.
d. To provide priority attention to women who are under a particular vulnerability status, either because of their socio-economic condition, age, ethnic condition, disability or immigrant or displaced status.

2-3 National Machinery

By means of statutory law published in the Official Newspaper on July 11th, 2002, the structure of former Ministry was modified and the Ministry of Woman Affairs and Social Development was thus created.

It establishes that MIMDES designs, proposes and executes policies of social and human development, oriented to the promotion of gender equality and equal opportunities for women, children, the third age and populations in poverty and extreme poverty conditions, the discriminated and the excluded.

Before the mentioned Law was promulgated, its denomination was Ministry of Promotion of Woman and Human Development (PROMUDEH), created on October 29th, 1996 by means of Legislative Decree 866, which had as purpose the development of the woman and the family, under the principle of equal opportunities, promotion of activities in favor of human development and delivery of special care to minors in risk.

MIMDES general objectives are:

- a. To formulate policies and norms oriented to promote equal opportunities between men and women, including affirmative actions of temporary basis to revert discriminative situations against the women;
- b. To contribute to develop capacities and to facilitate social entrepreneurial processes of the poor through adequate education, nutrition, protection and family promotion, integration processes and promotion of a culture of peace;
- c. To contribute to develop capacities and to overcome poverty, promoting equality and the generation of opportunities with a territorial approach through the development and improvement of basic and productive infrastructure, employment generation, best access to the market and the development of economic capacities for competitiveness;
- d. To improve and to assure economic and social access to vulnerable groups and by providing social services in situations emergency as means to contribute to extreme poverty reduction;
- e. To contribute to overcome the diverse forms of inequity, exclusion and social violence, especially of children, adolescents, women and adults, exerting its governing role within the Decentralized System of Guarantees for Human and Social Development framework articulating the State, civil society and the private sector efforts.
- f. To establish a System for the Provision of Social Services for the implementation of the National Plans by restructuring current ways of financing, monitoring, articulation, and execution of the social programs, and by implementing a participative social management by results. Likewise, it is oriented to implement a decentralized management system

with a territorial approach of the social programs of the Sector, within the framework of the State management modernization process; as well as to consolidate MIMDES as a modern, efficient and effective organism which guarantees transparency, political neutrality and ethics in public management, promoting conscious and responsible public servers.

The above objectives are integrated within the framework of the National Policy for Overcoming Poverty:

- a. Development of human capacities and respect of the fundamental rights.
- b. Promotion of opportunities and economic capacities for the people and families in poverty and extreme poverty conditions
- c. Establishment of a social protection network

Although the budget assigned to MIMDES has increased in 28% during the period between 2003 and 2006, it only represents 2.4% of the public sector expenditure and 2.5% of the GDP.

Source: MEF

Despite of Peru's sustained economic growth, there is still inconsistency between the economic policies and the social ones. Only 8% of the country's GDP is destined to social expenditure (education and culture, health and sanitation, employment, housing and urban development and social protection) compared to 15% average in the Latin American countries. Annual social expenditure per person is also very low. \$170 per year vs. \$610 average in the region (over 260% more) is a critical issue that has to be reviewed and placed as a priority in 2007 budget.

3. Current Situation of Women by Sector and Important Issues

3-1 Education

Illiteracy for 15 year old women or more is 18% while the Latin America average is 11-12%, and is almost double the total illiteracy, that is 12%. It should be pointed out that, as a result of more educational coverage, female illiteracy among young females has gone down to 4%.

Source: Based on Cuanto Institute data (2005) *Peru in Numbers*

Registration for primary school is practically universal, but goes down by 68% in high school and 33% in college. Even though the gender relation by educational level is 100%, 97% and 107% for primary, high school and college, respectively, it is fair for a low and insufficient level for the requirements of an education oriented to employment and economic activity. The repetition gender gap as primary and high school desertion is not significant.

One of the highest current limitations is the low coverage of initial education (3-5 years) which is 53% at total level, 54% male, 53% female, 62% in the urban area and 43% in the rural area. In the range from 0 to 2 years, 97% of the children are not served by the educational system, 52% at 3 years, 3.3% at 4 years and 19,3% at 5 years.

Source: Ministerio de Educación.

3-2 Health

The Government of Peru is committed to ensure universal access to health services without cost, in a continuous, timely and quality fashion, with priority in poverty concentration areas and in the most vulnerable population sectors.

As of the International Population and Development Conference (IPDC) in 1994 and then at the IV World Conference about Women in 1995, in Peru, legal and normative frames were created aiming to guarantee women health and their reproductive rights¹⁹.

Under the IPDC Action Program, all countries were encouraged to ensure that all persons, according to their age, may have access, through the primary care systems to reproductive health services including safe pregnancy services,

¹⁹ Laws / Supreme Decrees:

- ◇ S.D. N° 006-2006-SA (March 21, 2006-PLAN G). Creates the program Sissalud directed to the population that does not belong to the formal labour market (independent workers, taxi drivers, motorcycle- taxi drivers, locksmiths, bakers, masons, market workers, among other) and that have the capacity to make an economic contribution to cover health insurance.
- ◇ "Rules for Vertical Childbirth Care with Intercultural Adaptation", MINSA, Rules that standardize vertical childbirth care in accordance with international criteria and national experience. It responds to the need to adapt culturally the offer of services for women health care in order to contribute and increase institutional birth incidence and reduce the obstetrical complications that cause maternal death.
- ◇ Law N° 28731 (May 2006) It extends duration of the maternal lactation period until the child is one year old and in the case of multiple birth the lactation period is increased by one more hour per day.
- ◇ RM N° 107-2005-MINSA (February 14, 2005). It approves adolescents policy guidelines
- ◇ S.D. N° 005-2003. It considers as SIS beneficiaries the victims and/or relatives of human right violation, women who are victims of forced sterilization (Province of Anta-Cuzco- Huancabamba- Piura).
- ◇ Incorporates health promoters, excluded populations and political violence victims.
- ◇ Law 28048 (July 31, 2003) Protects pregnant women who carry out work that may jeopardize their health and/or the embryo normal development, it promotes health protection for the pregnant woman in her work space, without the risk of losing her job due to her pregnancy.
- ◇ Guideline No. 002-2003-IN/DDP-OE MUJ. Law 27240 is improved with the participation of the Specialized Police Woman Commission, on "Maternity and Lactation" at the Ministry of the Interior. The pregnant police woman shall be relocated to lower risk jobs (administrative work, for example) in order to protect her and she should be granted a special work timetable.
- ◇ S.D. N° 002-2002-JUS (January 15, 2002). Plan E, Senior Citizens: Pardoned, Innocent and their direct relatives
- ◇ Law N° 26644. Modifies the law that provides the right to prenatal and postnatal leave of absence for the pregnant worker.
- ◇ Law 27606 (December 23, 2001). Extension of post natal leave of absence in the case of multiple births. Extends to 30 additional days the leave of absence for women giving birth to two or more children
- ◇ Law N° 27591 (December 2001). The lactation period leave duration of the private sector female workers is levelled with the public sector (one hour daily), and also guarantees adequate maternity among women mothers and workers. It provides that the workers will have the right to one lactation hour up to the time when their child is one year old (it extends the lactation leave up to 6 months of age)
- ◇ Law N° 27402 (January 20, 2001). If the childbirth is produced after the childbirth probable date, the days of delay will be considered as temporal lack of capacity for the work and paid as such.
- ◇ Law N° 27408 (January 24, 2001). It established that at public facilities pregnant women, children, senior citizens and disabled persons will receive preferential service. It also mandates that the public facilities either governmental or private shall implement measures to provide this population the use and/or adequate access to the infrastructure.
- ◇ Law N° 27240 (December 20, 1999) complementary to Law N° 26644. To allow participation of 6,475 women in the Armed Forces. Also provides without major limitations, maternity leaves and the right for lactation time (for 6 months)

sexual health, family planning and prevention of sexual transmitted infections, including IHV/AIDS, as soon as possible and not beyond the year 2015. Peru committed to protect and promote the right of adolescents to education, information and care in the field of sexual and reproductive health.

In the opinion of the United Nations Special Narrator, Mr. Paul Hunt, the most important challenge faced by Peru in the right to health services is the one imposed by poverty and lack of justice. Therefore, the highest challenge is the definition of policies and execution of strategies that will improve access to health care and that will fundamentally fall on the determining factors of the population health in poverty, social exclusion and most vulnerability conditions. Consequently, these policies and strategies should consider the equity and perspective of citizen rights, including non discrimination and fundamental requirements for the case of sexual and reproductive rights.

Women health in Peru shows some relative progress, but we are behind the regional average and that of many countries. Main progress in the last two years is under the coverage of services such as institutional birth. The 274 waiting houses, the birth cultural adaptation in the public health units and other experiences such as the community surveillance system (SIVICO) that join the health service with the community to timely attract and care pregnant women have contributed significantly to increase childbirth care by health professionals and to duplicate the institutional childbirth figure in the rural area.

Childbirth at the health units has increased from 58% to 70%, in the urban area from 82% to 92%, and in the rural area the increase was even higher, from 24% to 43%.

On its part, specialized prenatal and childbirth care by trained personnel has increased from 84% to 91% in the last 5 years for prenatal care and from 59 to 71% for childbirth care.

The MINSA (Ministry of Health) has been implementing the National Plan to reduce Maternal and Prenatal Mortality. They have “Maternal Homes” or “Expecting Houses”, where the pregnant women come near their childbirth date. The childbirth institutional and prenatal care have improved from 55% (1196) to 74% (2004), duplicating the coverage in the rural area. In Peru we still have high maternal mortality rates, even when these have decreased from 185 x 100,000 live births (1994-2000) to 162 x 100,000 live births as of the end of 2003²⁰. In South America, Peru is the second country with the highest maternal death rate, after Bolivia. Rural women who live in poverty conditions and with a low educational level have a disproportionate risk of maternal death in our country.

One point in favour is that the Global Fertility Rate is 21% lower than the previous 5 years, a result, to a great extent, of the family planning and birth control methods diffusion which is offered at no cost at the health centres.

Fertility has decreased from 3 children per woman in 2000 to 2.3 in 2004-2005 (1.9 in Metropolitan Lima, 2.2 in the rest of the coast, 2.9 in the sierra and 3.6 in the forest/jungle). On its part, the gap between the observed and the wanted fertility has reduced to 2 children as average. The general fertility rate (number of births per 1000 women) went down from 97 to 85 in the case of women in their fertile years (15-49) and in the adolescents it went down from 66 to 59, in

²⁰ Drossdoff, Daniel, IDB América, Magazine of the Interamerican Development Bank, One Less Barrier to Health Care <http://www.iadb.org/idbamerica/index.cfm?thisid=2461>

the urban area it went down from 45 to 43 and in the rural area from 188 to 98. The role of women in fertility reduction should be highlighted, and this rate is conditioned to the country modernization, more access to the labour market, improvement in their educational levels, new family dynamic models and access to family planning methods, all of which have decreased gradually the gap between reproductive intentions and the actual fertility behaviour.

In 1986, for every 9 men there was one woman infected with HIV, in 2005 the ratio was 3 to 1. The increase in the number of infected women is related to vulnerability factors such as not too informed sexual behaviours. According to ENDES 2004 data, more than 50% of women with primary or lower educational level and more than 90% of those with college education stated that they were knowledgeable about at least one condom supply source, but only 20% of women with college education use condoms. Lack of knowledge about HIV/AIDS has gone down from 13% to 9%, and in adolescents from 12 to 9%. Only 44% knows that the use of condoms may prevent getting infected with sexually transmitted diseases such as HIV.

In recognition of women and girls vulnerability, the MINSA has been exerting efforts to reach a reduction in the price of drugs in order to improve the quality of life and access to them by persons who have such disease already.

According to the previous mentioned figures, while the epidemic has grown in our country, it is becoming more feminine, younger and poorer, increasing the number of women infected with HIV/AIDS and the number of children born from infected mothers. Under this context, the Peruvian Government accessed the Global Fund for the Fight against HIV/Aids, Tuberculosis and Malaria – and summoned the civil society and affected persons, all of which has allowed access to antiretroviral treatment, to the development of prevention activities in vulnerable populations, as well as the development of prevention strategies for adolescents and young persons.

An important program requirement is the active participation of the family and community involvement to provide the social support required by the affected persons. From its inception, the program has trained 700 community volunteers nationwide to provide home care to HIV infected persons, as well as support and orientation for the family. Recently 1,000 teachers, 1,000 school students and 1000 young persons from different sections of the cities have joined as educators and preventive activity promoters in adolescent and young people population groups.

It is also a Ministry of Health of Peru concern, the reduction of HIV transmission from the infected mother to her son or daughter (*Vertical transmission*). With this objective they implemented the “quick test”²¹, which allows early detection of the HIV infection in pregnant women. Up to the third quarter of 2005, 44,883

²¹ In the event of a positive result the Ministry of Health provides prophylactic antiretroviral treatment to reduce the possibility of HIV virus transmission from mother to child. Also, there are preventive treatments for the new born and special formula milk is provided for a period of 6 months to reduce the possibility of vertical transmission.

pregnant women had been checked both during the prenatal control or when the pregnant women arrive already in labour without having been previously checked.

The main malnutrition cause in fertile women is anemia which is an iron deficit syndrome. Anemia in fertile women is 26.6%, and a relative reduction has been experienced with respect to previous surveys, observing a better reduction in the rural area.

Source: *ENDES Continua* 2004-2005.

3-3 Agriculture

In Peru the total female population (urban and rural) constitutes approximately 50% of the total, mostly located in the urban residential area, as a consequence of the migration from the field to the city and making evident its effects over the country centralization.

Our country geographical diversity, the critical situation of the field and the lack of information have brought as a result the fact that rural women are not being taken into account by government policies and thus their rights and duties as citizens are limited. Also access to productive participation has been limited because since the man is considered the head of household this blocks the possibility of women to develop with autonomy within the agricultural work and to enjoy the usufruct from it. The most simple and common way to obtain land by rural women is then to wait for the husband inheritance.

Only in the last decade, governmental as well as non governmental organizations have given the required attention to women in the rural area and their access to productivity and other sectors to fully exercise their citizenship.

84% of women in the north and central sierra work daily in agricultural activities and their participation is directly related to the volume of land owned by the family. It is important to highlight that women participation in the agricultural activity is proportionally inversely to their purchasing power, that is, that in a family with a lower income, women participation in the agricultural activity is higher. (The Netherlands Cooperation for Development Service 1993).

Based on the III National Agriculture and Cattle Census, it is estimated that, in the coast mainly small and medium agriculture is developed and it is there where the largest number of employers exist. In the sierra even now the small rural property predominates, as such work in the plot of land is always a family non remunerated activity.

In spite of this data, women participation in the productive process development in the rural area generates improvement in the self-esteem and status gained in the family and social circles, with the possibility of making decisions which will mark the future of women and their families.

In 1972, women represented 13.3% of the farmers. In 1994, according to the third agriculture and cattle census, they comprised 20.7% of the agricultural producers and own a little more than 2 million hectares; their participation is much higher in the sierra than in the rural coastal areas. In the Amazon region they have a lower participation. Besides women farmers with employment are distributed by 22% in the coast, 21.3% in the sierra and 16.3% in the forest (selva) area.

Women participation in the field has been basically increased by three factors, in the last two decades. In the first place, crops have been oriented to commercialization in a progressive manner; as such women have gradually

increased their work in the plots of land, because they also cultivate non commercial products for their own consumption.

On the other hand, the cost of the family basket forces women to produce more. Also school assistance for children has increased and this implies a smaller possibility to have children labor forces in the plots of land. The number of women responsible for their families has increased also due to the following reasons: Because of the seasonal, voluntary or permanent migration of the husband or children over 21, thus generating a much larger participation of women in the field. In the past the labor migration of men was in search of refuge, but this has diminished totally in the last years.

From the above it can be deduced that women intervention in the mentioned activities varies according to the husband presence in the community. As such women participation in the field is higher in the case of women who are alone, those widows, single, abandoned mothers or women that even with a husband have to assume the responsibility of the household due to different reasons.

However this participation is even lower when compared to the number of men who participate in this type of activities. The independent agricultural producers, registered by ENAHO 98-IV in the eight sub-regions of the country, are mainly men. They represent 79.3% of the country total independent agricultural producers, while women are 20.7%. These percentages are kept curiously equal to the ones registered by the III National Agriculture and Cattle Census, which states that 79.6% are men and 20.4% are women.

This men predominance could be owed to, on one side, to an under registration of the agricultural work carried out by the female population, due to the fact that it is carried out in the family circle, without being paid and as such it is not valued as an important productive activity for the family income and on the other side, due to the fact that it is men who mostly own the family property title.

By analyzing the information by sub-regions, it can be observed that in the Forest area, the agricultural and cattle activity is mainly carried out by men. Out of each 10 producers, 9 are men and only one is a woman.

On the other hand, in the Coast and Sierra women presence is much more relevant. Thus, in the southern coast 34% of the independent agricultural producers are women. In the case of the central Sierra and southern Sierra, women participation in agricultural activities is important, they represent 29% and 26% respectively, that is, almost a third of the producers in these areas, come from female labor.

Total Number and Percentage of Independent Agricultural Producers
by Region, Sub-region and by Sex

Place of Residence	Number of Producers			%		
	Men	Women	Total	Men	Women	Total
Coast	247,067	55,123	302,190	82	18	100
Northern Coast	164,428	33,626	198,054	83	17	100
Central Coast	64,544	12,441	76,985	83	17	100
Southern Coast	18,095	9,056	27,151	66	34	100
Sierra	966,877	316,331	1'283,208	75	25	100
Northern Sierra	258,753	46,631	305,384	85	15	100
Central Sierra	350,172	143,013	493,185	71	29	100
Southern Sierra	357,952	126,687	484,639	74	26	100

Source: ENHAO-98 IV Trimestre. Encuesta al Productor Agropecuario.						

As a sort of conclusion it could be said that women role is fundamental both at social as well as economical level as they possess a deep and detailed knowledge of the species they are in contact with: the soil, the climate and natural energy care and attainment. Also they play an important role in commercialization since they participate in Sunday fairs and small markets and religious and cultural festive events. Women are directly in charge of raising the children, therefore, it is women who ensure continuity in the agricultural techniques and systems that are fundamental in the Andean ecosystems. They use traditional methods for community activities and are a source of information, thus consolidating the preservation of technologies inherited from their ancestors.

3-4 Fisheries

In the case of the fishing sector, the activities developed by women mainly comprise work in the local fishing activities and take place mostly in the coastal and industrial areas. Women do not participate in the extraction activity they work in the commercialization and transformation of fish resources.

At the unloading piers, the presence of women can be observed more and more. They work in the sale of fish products either because their husbands are fishermen or independently. You can see them selling on a retail basis at the piers, or at the markets, or as an intermediary or supplier for restaurants.

In the artisan area, women are dedicated to fish commercialization. They sell individually and daily as of the early morning.

They carry out their sales at the beach or at city markets. In the first case, the sale is therefore made by the unit to the public and/or intermediaries, who may opt to purchase the entire fishing output of the day. To sell in the retail market they require tools and a scale to weigh the products, as they may sell by pieces or units.

Inasmuch as for hydro-biological product commercialization it is important to use ice and in most cases it is not possible for them to get ice, women tend to preserve the fish with salt. Other cases include women work in the preparation of food based on fish products and their sale is made in an ambulatory fashion or at restaurants.

The following graph presents the areas of industrial fishing activity in our country. The values represent the percentage of fish products processing facilities (canned, frozen, dry-salted and fishmeal). Their values do not have any relation with the production volume and serve to present women participation data in this production area.

Peruvian women dedicated to fishing production activities, generally work at fish products processing plants for direct human consumption, where they are hired based on production periods and paid by shifts according to their productivity.

At the packing plants, their work comprises in the cleaning and disinfection of the facility, handling, cleaning, cutting and filleting or de-valvate process of the hydro-biological products, filling of cans, preparation and addition of the selected liquid, labeling and in general, work that requires a thorough inspection and smaller hands, with more fine motor faculty even though with less physical force than those of men.

Female personnel work in an intermittent and unpredictable fashion due to the fishing fortuitous nature. For example, as of the first half of 1998, the fishing production decreased by almost 80%, in 1999 recuperation did not reach significant levels and even when during the current year there are some recuperation signs, personnel work in general is not stable.

Female labor is considered qualified labor and unfortunately it is not adequately utilized. In very few cases, some companies during shutdown periods maintain some of the women, the most efficient ones, however not under a stable and permanent status, just to carry out cleaning activities and to maintain the work areas. Once the fishing season resumes, they are assigned to supervise the groups of newly contracted personnel.

NUMBER OF WORKERS IN FISHING PRODUCTION ACTIVITIES

ACTIVITY	PROCESSING PLANTS	WOMEN	MEN	TOTAL
Canned	95	14250	2850	17.100
Frozen	80	8000	1.600	9.600
Dry	20	400	100	500
Fish Meal	110	-	2.970	2.970
TOTAL				30.170

3-4-1

Evaluation of Women Strengths and Weaknesses in the Fishing Sector

Among the strengths that can be appreciated in women in the sector, we can list:

- Enterpriser
- Great will power
- Hard worker
- Very creative and ingenious
- Recognizes the need to receive training

Among the weaknesses in women in the sector, we can list:

- They have been educated under concepts developed by men
- They are not well informed about family planning aspects.

There are some Non Governmental Organizations (NGOs) that provide support to women to create small enterprises with social purposes. Also in the northern area of the country, the European Union Technical Cooperation Program for the Fishing Sector for Venezuela, Colombia, Ecuador and Peru: UE-VECEP, implemented a credit fund for the artisan fishing sector in order to contribute to the improvement of the working conditions and commercialization for the artisans among which are mainly women dedicated to that activity.

As a result of the above mentioned international cooperation, a salted fish processing facility was constructed in Chiclayo, north area of the country. In this location, training programs are developed with the participation of a large number of women processors and merchants however due to the nature of the resource they constitute now a variable number of workers.

In some fish commercialization communal centers, women form committees by organizing work groups to manage the dining area and the workshops where

they, after they complete the fish sale activities, release their artistic expression manufacturing handcrafts and artisan articles which they offer in the market.

A national project that has been developed in the fishing sector is the one called “Upgrading the Fishing Sector Training”, funded by the Inter-American Development Bank and executed by the Peruvian Fishing Technological Institute (ITP). This project has developed the handling and processing of fish products aspect, for two years and is about to end. 38% of women have been direct beneficiaries of this training. These women are mostly artisan fishermen wives and others are dedicated to the commercialization and sale of hydro-biological products.

3-5 Economic Activities

In the economic sector, in 2003, the economic activity rate was 35.6%, a level representing an increase of just 21% since 1990, and only represents 45% of the masculine activity rate, which is 79%. 84% of the women employment is located in the service sector, while 10% is in the industry and only 6% in the agricultural sector²².

In recent years, female employment has suffered a precarious hit. For example, in Metropolitan Lima, 49% of the women work without access to protection of their labour and social security rights, and the decent work criteria established by the OIT is not being met. Women represent 44.2% (5.3 million) of the occupied urban PEA (Economic Active Population) and 8.1% do not have jobs. 30% of the female PEA is located in Lima, 35% in the rural area and the remaining 35% in the urban area²³.

In the urban area, 14.3% of the occupied women work in micro-enterprises (2-9 workers) and 11.3% is a family worker without pay in front to a 56% in the rural area.

Underemployment by income is 30% of the PEA, while in the case of women is about 50% and in men 38%, this implies that one of each three active working women is receiving income that does not meet the minimum family basket requirements. Informality encompasses 61% of the PEA.

For 2002, almost a million urban area households were leaded by a woman (23%), in front of 77% leaded by men.

²² UNDP (2005), Human Development Global Report, Nueva York

²³ Consorcio de Investigación Económica y Social –CIES (2006), Contributions for the Peruvian Government 2006-2011, Gender: Jennie Dador T.

3-6 Violence Aspects

42% of women have reported jointly to have experienced some type of violence at least once. Sometimes during the relations with their partners they have been pushed, hit or physically abused by their husbands or partners. This type of violence is larger among divorced, separated women or widows (63%) and those over 35 years old (46%). According to the residence area, a major proportion is presented among women in urban area (43%) and by regions in the sierra (47%)²⁴. 10% stated that they had been forced to have sexual relations by their husband or partner. Women who have experienced more this type of violence are those separated, divorced or widows (23%), those who do not have an education level (17%) and those over 35 years old.

Fuente: ENDES Continua 2004-2005.

57% of women sometime reported to have suffered some type of violence once and those whose partner drinks alcohol, were hit or attacked by their husbands or partners when they were under the influence of alcohol or drugs or both. The highest proportion of women who have been physically attacked under these circumstances sometime, is among women without education (77%), those 25-29 years old (64%) and among the divorced, separated or widows (57%). By richness quintiles the percentage of women who reported to have been violence victims under these conditions decreases in the quintiles, from 71% of the women that are located in the lower quintile up to 35% of the women that are located in the superior quintile. According to the place of residence, it is presented in a larger proportion among women who reside in the rural area (65%) and in the Sierra (70%).

²⁴ It should be mentioned that the incidence in the case of the rural area is lower than the urban area and it can be due to over- registration factors.

Source: ENDES Continua 2004-2005

It is indicative that only 21% of all women who suffer violence approach any institution to get help: 14% to the police stations, 3% to some court, 2% to the District Attorney Office, 2% of the DEMUNA²⁵, 1% to some health center and 0.7% to MIMDES (Women Emergency Centers). Among the reasons for not getting help we can highlight: 28.5% indicated that they were responsible for the violent act, 29.7% indicated that the denouncement was not necessary, 11.6% said they were afraid to receive more aggression and 9.6% did not know where to go.

Following is diverse empiric and casuistical evidence with respect to the explanations and dimensions of violence against women.

²⁵ Women, Child and Adolescent Ombudsman Office.

Violence against women
<i>Evidence for the implementation of policies and strategies.</i>²⁶
• There is a high and positive association between physical and psychological violence.
• There is low association between the marriage relation time and domestic violence, and the tendency is more psychological violence to longer relation time.
• Low relation between unsatisfied basic needs and physical and psychological violence.
• The husband economic contribution is little related but positively with physical and psychological violence towards the woman.
• There is no major frequency of physical or psychological violence in rural areas, with respect to urban areas.
• There is positive and high association between the violence frequency and the alcohol consumption of the spouse.
• The husband educational level presents a low and inverse association to the existence of physical and psychological violence.
• The woman level of education has a low and inverse relation with the physical violence towards women.
• There is positive relation, however low, between violence in the woman original family and the violence of the spouse towards her.
• There is positive but low relation between spouse violence and punishment to the children.
• Women who are in favour of physical punishment were attacked and physically attack their children.
• Most of women who have been attacked do not accept to be living an abuse situation.
• Women act sometimes by interfering in their own conflict solution.
• Women many times justify the male abuse.
• Victims develop economic and psychological dependency in front of their partner.
• A low percentage of abused women denounce the facts.
• Psychological violence is the most frequent abuse type in women.
• The attackers are mostly men between 30-49 years old, with primary or high school education.
• According to a WHO study, with the Universidad Cayetano Heredia and the NGO Flora Tristan, 51% of the interviewed women in Lima have reported to be victims of physical and sexual abuse by their partners, at least once.
• Out of all the abused or attacked women, only 20% or less will seek help.
• Violence episodes take place during women pregnancies, increasing abortion risks.
• The elements related to family violence are: the economic situation, the incidence of alcohol consumption and the lack of knowledge of the population regarding laws and regulations related to family violence.
• In the sexual abusers there is a lack of consciousness as to their act, since they conceive violation only as a physical violence act.
• Sexual violence within the marriage is concealed as family violence.
• Women sometimes during their marriage violence episodes have been also victims of sexual violence by their partners.
• Almost no one considers actions such as rubbing, handling or touching of intimate parts as sexual

²⁶ Prepared based on: The National Program against Family and Sexual Violence –PNCVFS (2003), Status of the family and sexual violence investigations", March; Ochoa Rivero, Silvia, Factors associated to the presence of violence against women, INEI, working paper.

violence
<ul style="list-style-type: none"> • The alleged sexual attackers can be family or strangers
<ul style="list-style-type: none"> • The victim testimony is not considered full evidence in the judicial processes.
<ul style="list-style-type: none"> • There is gender discrimination against women in the process and resolution of sexual violence cases.
<ul style="list-style-type: none"> • Women do not have information, resources and adequate channels to access to legal counselling services.
<ul style="list-style-type: none"> • According to service reports, girls are the most affected by sexual abuse.
<ul style="list-style-type: none"> • Not always, after a sexual violence denouncement, would the police come to the scene immediately.
<ul style="list-style-type: none"> • Police officers still maintain sexist stereotypes.

3-7 Political Participation

As an associated result of the rules, such as the gender quotas, today²⁷ we have 4 Female Regional Presidents out of the current 25 (16%), 3 of the 25 Female Regional Vice Presidents (12%), 51 Regional Advisors out of the existing 228 (22%), 36 female representatives of the civil society elected for the Regional Coordination Councils (RCC) with a total of 170 representatives (21%). A low participation can be found in the local governments where women only represent 3% of the total. In the last electoral process (2006), 35 women were elected congresswomen in the new Parliament, which is 29% of the total, an increase of 11% with respect to their participation in 2001. Out of the elected congresswomen, 11% are from Lima and 69% from another 9 regions, Junin, Piura, Puno, Pasco, San Martin, Moquegua, Amazonas, Ancash and La Libertad. There are 6 women in the Cabinet (37.5%) showing a 25% increase as was in previous Cabinets (2001-2005).

²⁷ November, 2006, prior to the official results of the Municipal and Regional elections.

4. Gender Projects

In the last years the government has prioritized sector strategies to develop the capacity of women entrepreneurs and business promoters, creating economic opportunities linked to the market. With this, it is intended to make easier the exercise of women economic rights and their access to training and technical assistance services, property titles, credit and worthy employment.

4-1 MIMDES Contributions

Programa A Trabajar Rural, directed to temporal employment generation that will contribute to improve the poor urban population quality of life and which targets heads of households with at least one minor child, and grants an economic compensation to each participant with salaries under the market level (S/ 14.00 daily). The poor and extreme poor head of households, mainly women of the rural areas had access to resources. Between 2001 and April 2005, 40,907 women head of households were hired as brigade members.

By joining the results of A Trabajar, Mejorando Tu Vida and A Producir, 70,671 women jobs (non qualified labor) and 5,341 jobs (qualified labor) have been generated.

- ◇ MTV (Programa Mejorando Tu Vida): 4,688 women (23% of the total program brigade members).
- ◇ Installation of allocation mechanism, resource execution, direct and participative through executing centers ¹.
- ◇ ATR (Programa a Trabajar Rural): 1, 675 women (20% of the total brigade members in the program).
- ◇ APR (Programa a Producir Rural): 804 women (19% of the total brigade members in the program).

This goal has been reached because MIMDES/Foncodes enforced a woman participation quota in the “executing centers”²⁸ that manage and guide local development projects and incorporated an equity perspective and considered social and citizenship inclusion, exchange of cultures and environmental conservation. One of Foncodes success stories with regard to women is the level of equality they have accomplished in the allocation of micro credit. Out of 30,550 small entrepreneurs that had access to credit in 2002, 47.19% was allocated to enterprises managed by women.

Programa Mi Chamba. It was created as of the end of September 2005, as a government contribution to the development of skills and access to business opportunities with market for enterprises, micro and small business in the national area, with the development of training, technical assistance, information and credit products, applied under favorable conditions to the users

²⁸ The executing center is a resource allocation and execution mechanism. It is the expression of the participation of the organized community in the promotion of works for local development.

and related to their productivity level and economic sector. For its implementation, MIMDES generates alliances with the PRODUCCION, MTPE, MINAG, and MINCETUR in order to interlink productive chains in economic corridors, identifying local, regional, national and international markets. Likewise, in the case of the medium and large companies, social responsibility has been promoted in the generation of markets and services for micro and small businesses and particularly women entrepreneurs. The micro finance entities, Cajas Municipales (municipal savings and loan associations), Cajas Rurales, Edpymes and NGOs, they also provide credit products according to the market, thanks to an outsourcing financial service contract with Foncodes.

The application of a training bonus system from Foncodes with Swisscontact, a technical cooperation agency, has allowed to improve productivity and to reach productivity improvements in different lines of the economic activity, among which we can mention clothing and shoe manufacturing, embroidering, knitting, snail raising, chocolate manufacturing and the production of caupi bean, artichokes and artisan articles, among other. More than 1,500 women have accessed the market mainly in Lima, Callao, Trujillo and Ayacucho.

With the Program resources, training was provided in the use and maintenance of gas stoves to women members from approximately 12,000 soup kitchens nationwide, in order to help them not only to prepare safe foodstuffs but also to be capable of providing the service to their neighbors. Also productive technical assistance was provided to entrepreneurs from approximately 7 Mypes in Huancayo and Trujillo, improving their productivity and ensuring production quality in the use of gas stoves.

Project “Desarrollo de Capacidades Económicas de Mujeres en las Provincias de Huanta y La Mar” with the Peruvian-Italian Fund. Through the latter, approximately 2,000 women entrepreneurs from two provinces in Ayacucho will be benefited. They were victims of political, family and sexual violence. Its conceptual framework is to propitiate women economic independence as an exit strategy out of the violence circle.

Programa Pobreza Lima - Propoli. This Program has a line of co-financing bonus directed to Mype women entrepreneurs from the manufacturing, commerce or service sectors. They can access to discounts in Business Development Services such as Training and Technical Assistance/Counseling, by paying a minimum cost.

Propoli, through agreement with the Ministry of Labor and Employment Promotion, is providing support to the Programa Mujeres Emprendedoras-Profece, to favor the labor insertion of women entrepreneurs, promoting their employment and market opportunities. Through BONOPROPOLI 1,511 women have been trained in 155 courses using 3,007 bonuses.

Project: “Contigo Ayacucho” with Belgian Cooperation. Through this program approximately 900 women entrepreneurs from Ayacucho have been benefited with productive training, out of which more than 300 are now inserted in the Lima market. They have been victims of political, family and sexual violence.

The conceptual framework is to propitiate women economic independence as an exit strategy from the violence circle.

In 2004, MIMDES-INABIF, through the Programa de Promocion Familiar (PPF) carried out workshops oriented to promote and support the work of independent women and the creation of small businesses, reaching a participating of 1,154 women nationwide.

A monthly average of 1,760 women was provided training in cosmetology, food industry, clothing and manual labor workshops.

Programa Nacional de Wawa Wasi (PNWW): This program allows working women – many of them in the independent business sector- to leave their children in a safe place and where they are exposed to early child stimulation for their development. Likewise, it strengthens and empowers the conduction capacity of women facilitators in charge of the Wawawasi, in the 439 Management Committees and 439 Surveillance Councils that have been constituted from base organizations (Mothers Clubs, Popular Soup kitchens, Glass of milk or others).

4-2 MINTRA Contributions

PRODAME. El Programa de Autoempleo y Microempresa (PRODAME) has contributed up to 2003 with the constitution of 2,187 micro-enterprises, providing support to 5,190 male and female entrepreneurs (MTPE).

Programa Pro Joven. In the 12 official invitations, approximately 37,000 young persons have been benefited (54% women). The evaluations performed indicate an increase in the actual income for the participants in an average of 97%. Women accomplished a 126% increase and men 77%. The young persons were placed in approximately 3,500 enterprises from different sectors. In 2004, Pro Joven has entered into a loan agreement with the IDB, by which it has been proposed to serve 47,000 new young persons in the next four years.

Perú Emprendedor. It promotes development of the micro and small enterprises and business initiatives thus contributing to employment generation. Through BONOPYME they served 26,500 entrepreneurs or workers of small micro businesses, providing business development services, out of which 16,983 were women (64%) and 9,548 were men. It was implemented in the last three years in the Junin, La Libertad, Lambayeque, Ancash, Cajamarca, Piura, Huanuco, San Martin and Lima regions. Between the years 2000 and 2002, 56.2% of the training bonuses were used by women.

Programa Femenino de Consolidación de Empleo (PROFECE - Mujeres Emprendedoras)

Profece promotes low income women organized in GOOL (Labor offer organized groups) products and services to meet the companies demand. It has, among its objectives: To improve labor insertion of women in charge of

productive and service units. It promotes commercial links of low income women with local, regional and export markets productive activities.

Profece, has achieved 33,387 women commercial links, through commercial fairs co-organized with the municipalities and commercial linking agents and companies that have required services. Approximately 90% of the participants are women. 6,962 women have been trained in technical-productive, management and personal development courses. It is the government advisory organization in the field of organized group economic initiatives, led by women and it has become the largest service and products group exchange nationwide.

4-3 MINAG Contributions

Programa Nacional de Manejo de Cuencas Hidrográficas y Conservación de Suelos – PRONAMACHCS (1995 to 2003). 30% of the participants were women. They received credits and agricultural loans, citizenship training and technology transfer to improve their situation in the rural area by strengthening their technical-productive skills and their quality of life.

Project: “Manejo de Recursos Naturales en la Sierra Sur- MARENASS”, (1998 – 2004). More than 28,000 families from 360 communities located between the southeast and south central regions of Peru have improved their self-management capacity in productive and financial natural resources, improving the quality of life of the poorest population of Peru. In these communities, organized women groups have doubled or tripled their production and commercialization funds and the planning and management skills of more than 20,000 women have been strengthened in poverty and extreme poverty areas.

In the period 2000-2003, a total of 19,165 women were trained on issues such as organization, leadership, self-esteem, business and natural resources management. By 2003 it was possible to hire 196 as trainers.

Proyecto Especial de Titulación de Tierras (PETT). It provides juridical security to women who own rural land so that they can access to formal credit. The number of women with rural property titles has gone from 46,500 in 2002, to 60,000 in 2003.

Status of Working Women

The incorporation of women to the labor market has been increasing in a sustainable fashion in the last two decades. In our country, in 1970, 3 out of each 10 women worked. In 1993, 5 out of 101 were already working. As a consequence, the number of women who actually work in the labor market has increased, and also women contribution to the family income has increased²⁹. However, higher unemployment rates are recorded for women than those for

²⁹ Women, employment and poverty. The recent experience of Andean countries. OIT 2000

men, and women for the same type of work receive between 55% (rural) and 77% (urban) than men. This gap is being reduced.

In the case of international agencies, the United Nations, through UNFPA, focuses their activities on three main spheres:

- ◇ To promote the objective of universal access to reproductive health, including family planning and sexual health of all couples and individuals for the year 2015.
- ◇ To support population and development strategies encouraging the promotion of programming capacity in the field of population.
- ◇ To promote awareness about the issues related with the population and development and to mobilize the necessary resources and political will to carry out the Fund tasks.

During the period 2000-2005, UNFPA has been working with the Ministry of Health to contribute to the efforts of Peru to improve the sexual and reproductive health of the general population and to promote the exercise of sexual and reproductive rights, in order to reduce the gender lack of equity and the existing gaps among the different social layers and geographical areas.
