## 来日者情報／Participant Info

- English: Over the last seven years, Ayush has led Xane's market strategy, enterprise relationships, fundraising, and cross-industry expansion- from automotive and manufacturing to industrial equipment. He has worked closely with leadership teams at Maruti Suzuki, Volkswagen Group, Nissan, MG Motor, Bosch, ITC and others, helping them modernize product support and reduce reliance on traditional manuals. His long-term vision is to scale Xane into a global platform powering the next generation of product experiences.

## 事業内容／What We Do

Xane AI is an enterprise AI company building multimodal assistance systems for complex products. We transform static manuals, SOPs, and after-sales documentation into real-time, camera-, voice-, and text-based guidance powered by computer vision and deterministic AI.

Often described as the "Shazam for Product Experiences," Xane AI enables users to simply point their camera at a machine or vehicle and instantly receive precise, step-by-step support. Our platform is designed for industries where accuracy, compliance, and safety are critical, including automotive, industrial equipment, and consumer appliances.

We work with leading automotive OEMs and are expanding globally to support Software-Defined Vehicles (SDVs) and connected product ecosystems. Our AI is built with guardrails to ensure reliability, traceability, and zero hallucination in production environments.

Headquartered in India, Xane AI partners with manufacturers, service networks, and technology providers to improve customer experience, reduce service costs, and unlock new digital revenue streams.
