

NINJA Business Plan Competition

in response to COVID-19

Startups in AFRICA -The Grand Final-

26 Feb 2021

JICA Project NINJA

NINJA (Next Innovation with Japan)

With the explosive spread of cell phones in developing countries, businesses based on and derived from mobile payments have emerged one after another, and innovations and start-up businesses that utilize technology are attracting greater attention. New businesses by entrepreneurs involved in many of these start-ups in developing countries are usually aim at solving social problems, such as substitutes for things that are not available in local life or services that improve inconvenient situations, rather than businesses that incorporate cutting-edge technology.

JICA launched the Project Ninja (Next Innovation with Japan) in January 2020, and it works on multifaceted support for entrepreneurs who take on the challenge of

solving social issues in developing countries. NINJA's support includes entrepreneurship development activities, business matching, promotion of venture/impact investment, and policy recommendations to strengthen the ecosystem. The inclusion of "with Japan" in NINJA implies that Japan will continue to innovate with entrepreneurs in developing countries to co-create a sustainable and prosperous economy and society. In order to make a significant contribution to achieving the Sustainable Development Goals (SDGs), we will also promote collaboration between entrepreneurs in developing countries and Japanese companies, investors, and research institutions.

- ① Activities to raise awareness of entrepreneurship and foster entrepreneurs.
- ② Promotion of corporate collaboration by holding events in Japan and overseas.
- ③ Promotion of venture investment/impact investment
- ④ Dissemination of information on local startups
- ⑤ Proposal of policies to strengthen the startup ecosystem
- ⑥ Understanding the impact of startups

A hand is shown in the foreground, pointing towards a glowing digital globe on the left side of the page. The globe is composed of white circuit-like patterns and is set against a dark blue background with a grid of light blue lines. The overall aesthetic is futuristic and technological.

Startups in AFRICA

- The Grand Final of the NINJA Business Plan Competition-

Africa is facing many social issues, which are especially evident in Africa's high unemployment and lack of public infrastructure. On the other hand, many entrepreneurs are emerging to solve social issues through the implementation of the latest technology while engaging a market of 1.3 billion people, which is known as the leapfrogging*. The global craze of Covid-19 has also triggered a major change in the social structure and the concept of

distance in the world, including Africa. Against this backdrop, JICA held a business plan competition titled "NINJA Business Plan Competition in response to COVID 19" in 19 countries in the African region in order to support start-ups that will create innovative business models and technologies for the post-Corona era. 10 companies were selected from a total of 2,713 applicants, and the Grand Final was held in collaboration with Nikkei Inc.

* Leapfrogging: A phenomenon where the existing social infrastructure is not well developed, and new services spread at once without going through the "normal gradual changes in technological development" that developed countries have gone through.

Outline

- 19:00 Opening remarks, introduction of commentators
- 19:15 Panel Discussion "With Japan, Thinking about Partnership with Africa"
- 19:25 Pitches by 10 African startups
- 21:20 Announced Top 3 winners -Viewer Voting Results and Special Awards -
- 21:25 Wrap-up and closing remarks by commentators

Commentator

Mr. Mutsuo Iwai

Chairman of the Project Team for African Development, Keizai Doyukai (Japan Association of Corporate Executives)/Deputy Chairman of the Board, Japan Tobacco Inc.

Mr. Ken Shibusawa

Chairman of Commons Asset Management, Inc./ The leader of the Nikkei's African Business Delegation in 2019

Mr. Keiji Katai

Senior Director, Economic Development Department, JICA (Japan International Cooperate Agency)

Grand Final and Results

In a final vote by the viewing participants, the top 3 outstanding startups were selected, and 8 Japanese companies provided special awards.

Viewer Voting Results

Viewer Vote
1st Place

Mobile Scan Solutions
also known as M-Scan **Uganda**

Viewer Vote
2nd Place

TranSoniCa **Ghana**

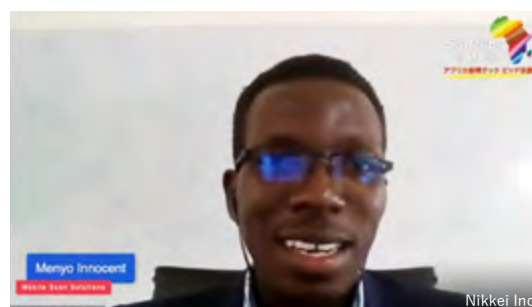

Viewer Vote
3rd Place

Agrinfo **Tanzania**

As a supplementary prize, JICA will offer the top 3 startups the opportunity to invite their representatives to Japan and match them with Japanese companies. Nikkei Inc. will offer 5 free annual subscriptions per company to English digital media outlet, Nikkei Asia.

Mr. Menyo Innocent, CEO of Mobile Scan Solutions, commented on the awards:

"I would like to congratulate all the entrepreneurs who took the stage for winning this award. Each company that participated in this contest does something very important and has a great impact on the lives of people in Africa. Over the next 2 to 3 years, M-SCAN aims to make the ultrasound echo device introduced here available to 1.5 million pregnant women, and also plans to increase the number of facilities where the machines will be provided."

Mr. Daniel Elliot Kwantwi, CEO of TranSoniCa, commented on the awards:

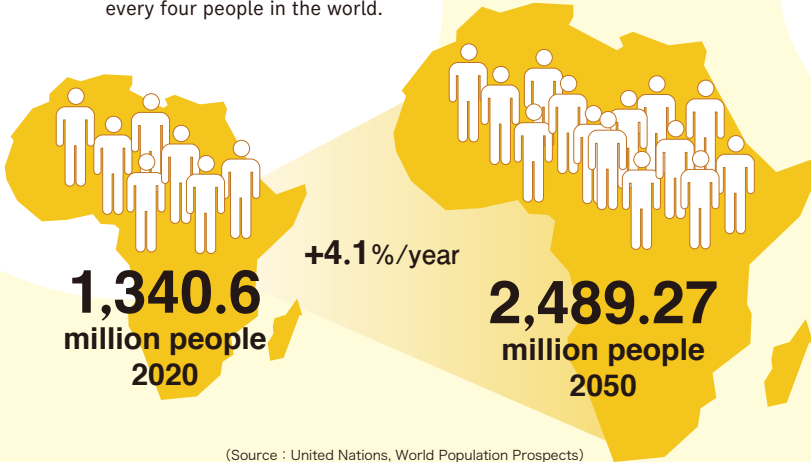

"Through this contest, I was able to meet entrepreneurs from other countries. For example, MojaRide in Cote d'Ivoire has a similar service, but I would not have met them without this opportunity. In the future, we will gain momentum to further expand our business and achieve our goals. Through our expertise and partnerships, we hope to develop a business that contributes to the people in Africa."

Analysis of the Africa Startup Industry

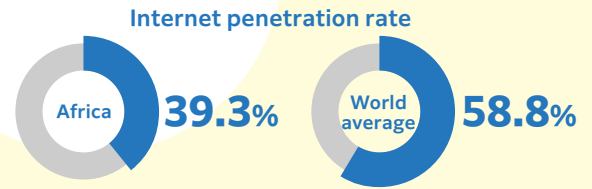

1 African population and growth rate

Currently, the population of Africa exceeds 1.3 billion people. It is growing by 4.1% every year, which is about twice as fast as the world average. By 2050, the population is expected to surpass 2.5 billion, or one out of every four people in the world.

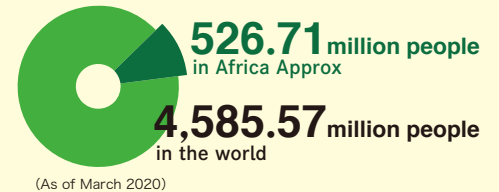

2 Internet accessibility in Africa

One of the factors behind the rapid increase in the number of start-up companies in Africa is the availability of high-speed Internet, especially mobile broadband, in many parts of the continent.

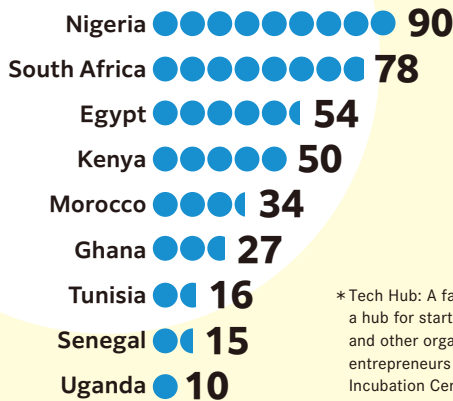

The Number of Internet users Approx

3 Number of Tech Hubs* in Africa in 2020

Over the past three years, the number of Tech Hubs in Africa has increased by 50%, thereby fostering a start-up and innovation culture on the continent.

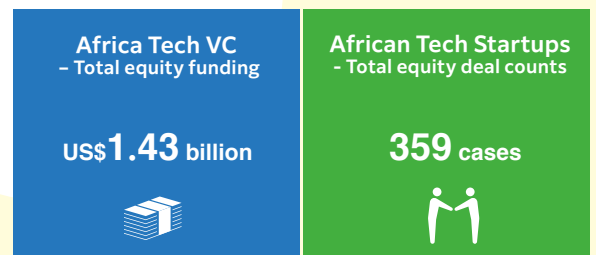

* Tech Hub: A facility that serves as a hub for startups, universities, and other organizations to support entrepreneurs and businesses. Incubation Center, etc.

(Source: GSM Association, Africa Tech Venture Capital Report, Partech Partners)

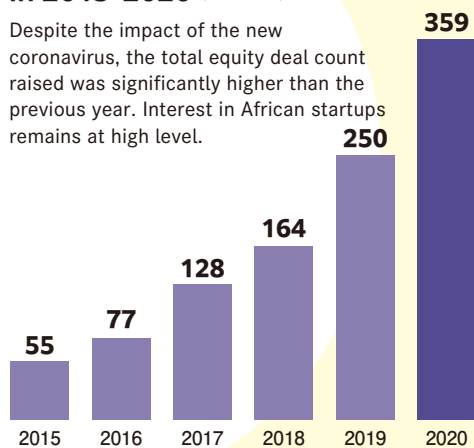

4 Total amount and equity deal funding raised by African startups in 2020

The total amount of funding raised by African startups reached US\$1.43 billion in 2020. The total equity deal count of funds raised increased by 44% year on year, and the focus on African startups is increasing.

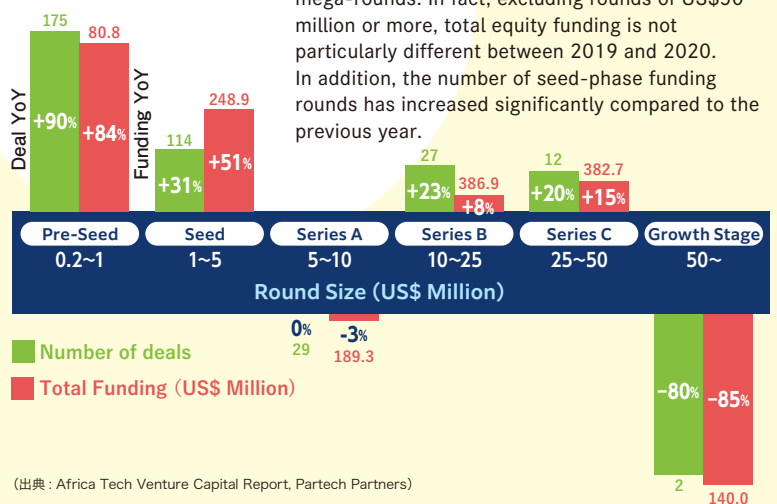

5 Total equity deal count of African Startup Funding in 2015-2020 (Number)

Despite the impact of the new coronavirus, the total equity deal count raised was significantly higher than the previous year. Interest in African startups remains at high level.

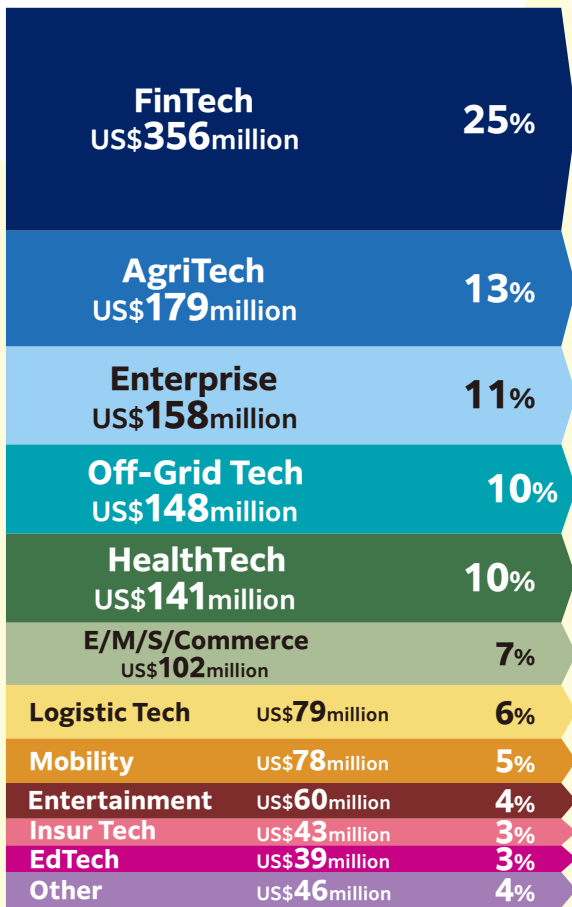

6 Total equity deal Amount and Number of Deals Raised by Round Size for 2020 African Startup Funding

Almost all deals below US\$50 million have seen an increase in activity levels; deals between US\$200,000 and US\$1 million have almost doubled, continuing the trend of previous years. One of the main reasons for the decline in total equity financing is the decline in mega-rounds. In fact, excluding rounds of US\$50 million or more, total equity funding is not particularly different between 2019 and 2020. In addition, the number of seed-phase funding rounds has increased significantly compared to the previous year.

7 Top equity-funded verticals of African Startups by Tech Sector in 2020

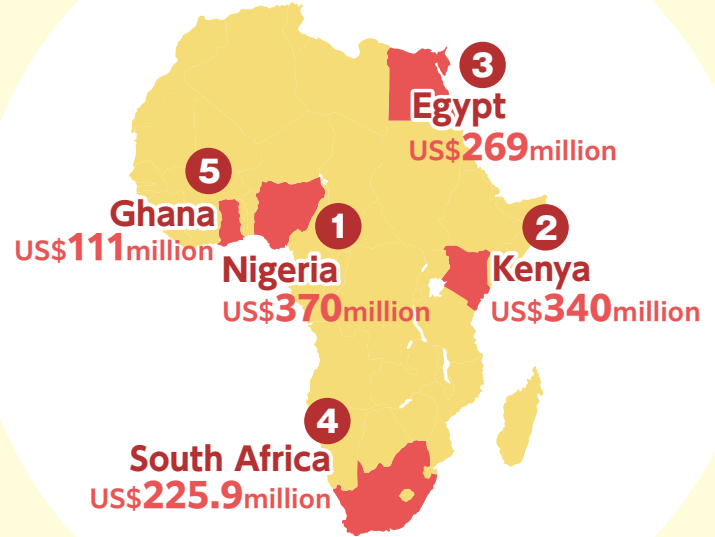

FinTech remains at the top of the list with 25% of the total funding of US\$356 million. 2020 highlights include AgriTech with US\$179 million, Logistics & Mobility with US\$157 million. In 2020, it is worth noting that investments in IT and data in new economic sectors are on the rise, including US\$148 million in Off-Grid Tech, and US\$141 million in HealthTech.

(Source: Africa Tech Venture Capital Report, Partech Partners)

8 Top5 African countries - Total amount of equity funding in African startups in 2020

Investment in venture companies in Africa is concentrated in the top four countries, accounting for about 80% of the total investment. Ghana ranks fifth and is beginning to attract attention with equity investments reaching US\$111 million, up 102% from the previous year.

(Source: Africa Tech Venture Capital Report, Partech Partners)

*Enterprise: Enterprise mainly refers to the various programs used to process the core information of a company, such as general affairs, accounting, human resources, production, and sales. In particular, it is utilized when IT solutions are used to deal with processes that are required between the various departments of a large corporation or global enterprises, such as accounting and customer management systems. In recent years, more and more companies are adopting enterprise software as their core business systems.

9 Top 10 African startups with the Largest Amount of Funding in 2020

As in the previous year, FinTech received the largest amount of funding among African startups. Off-grid solar power generation startups ranked among the top 10 startups in Africa as the renewable energy sector attracted attention. HealthTech companies were also ranked due to the impact of the new coronavirus.

| COMPANY | COUNTRY | DESCRIPTION | SECTOR | FUNDING US\$ million |
|---------------------|--|--|------------|----------------------|
| DPO Group | Kenya | Payment Processing Company | Fintech | 288 |
| Paystack | Nigeria | Mobile Money & Payment Services | Fintech | 200 |
| MetroFibreNetworx | South Africa | Fiber optic connectivity provider | Internet | 97.6 |
| Jumo | South Africa | Financial Service provider | Fintech | 55 |
| CrossBoundaryEnergy | Nigeria | Developing Commercial & industrial Solor | Energy | 40 |
| Vezeeta | Egypt | Doctor booking platform | Healthtech | 40 |
| Flutterwave | Nigeria | Pyament technology startup | Fintech | 35 |
| Lumos Global | Nigeria | PAYG solor home system provider | Energy | 35 |
| Skynamo | South Africa | Sales management platform | Marketing | 30.1 |
| Chipper Cash | Uganda, Nigeria, Tanzania, Rwanda, South Africa, Ghana | Mobile transfer service provider | Fintech | 30 |

*Pay As You Go: A cell phone payment method where you pay only for what you use or need.

These African companies were selected from 2,713 participating companies in the NINJA Business Plan Competition in response to COVID-19.

Finalists 10 companies

Excellent Startups 59 companies

Total 69 companies

Mobile Scan Solutions Uganda (M-SCAN) Uganda

Founded in 2017

Employees 7

Industry Health

Website <https://www.mscanug.com/>

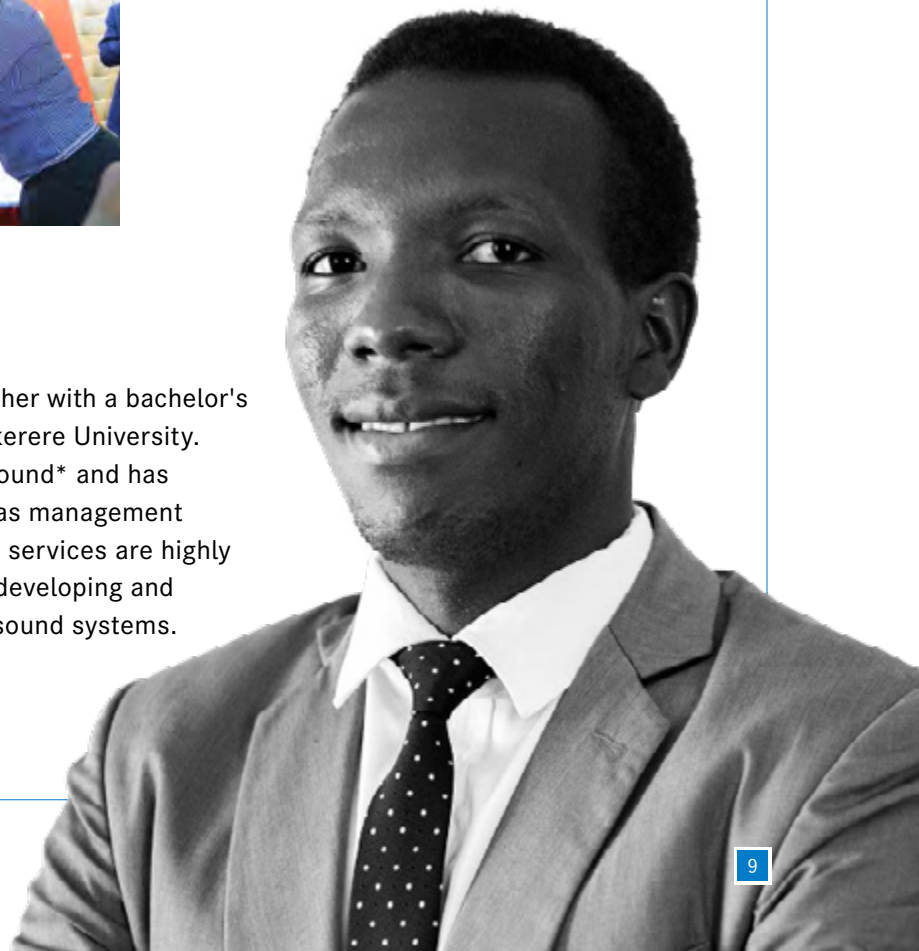

M-SCAN is providing a portable ultrasound system in East Africa that can detect risk factors for maternal mortality. Through tele-imaging, M-SCAN plans to develop a service that will allow expectant and nursing mothers to receive ultrasound examinations from the comfort of their homes. M-SCAN has already started services in 180 medical institutions in Uganda and expects to perform at least 2,400 consultations per year using the home ultrasound system.

Menyo Innocent

The CEO, Menyo Innocent, is a radiographer with a bachelor's degree in medical radiography from Makerere University. He is well versed in point-of-care ultrasound* and has extensive training in ultrasound as well as management and entrepreneurship. His expertise and services are highly compatible with a company focused on developing and expanding the market for portable ultrasound systems.

Agrinfo Tanzania

Founded in 2016

Employees 4

Industry Food and Agriculture

Website <http://www.agrinfo.co.tz/>

Agrinfo provides a digital platform, JembeKilimo, to small-scale farmers who do not have access to loans or agricultural consultation services. Although agriculture is a major industry in Tanzania, many financial institutions tend to avoid lending to small-scale farmers, making it difficult for farmers to raise funds. In addition, only 65% of farmers can enjoy agricultural consultation services, and the lack of information necessary for production is leading to stagnant incomes for farmers. JembeKilimo is a service that enables financial institutions to quantify the creditworthiness of farmers by using smart farmer information (GAP information), such as farmland conditions and weather information, which is necessary for small-scale farmers to improve their productivity,

and to perform credit scoring with high accuracy. By using JembeKilimo, financial institutions can provide loans to farmers based on accurate information. Also, by providing credit scoring, small-scale farmers will be able to access loans, which will enable them to obtain higher quality materials and enjoy services from financial institutions. Cell phone communication technology, reliable data from drones and satellite imagery, and advanced analytics will be used to remove barriers to smallholder credit, optimize GAP information, and enable agribusiness growth.

Rose Funja

Rose Funja has over 12 years of experience working in community development, both domestically and internationally. She is an engineer and social entrepreneur who uses digital technologies to solve community development challenges. She has worked in partnership with We-Robotics and United States - International Food Policy Research Institute (IFPRI) on a maize pre-harvest* loss research project in Chemba- Dodoma region, using satellite and drone imagery. She is also a non-executive director of Microfinance Victoria Finance and has been awarded the Mandela Washington Fellow 2014 and IVLP Hidden No More 2019.

Contact rose.funja@gmail.com

* **Pre-harvest** : The application of the herbicide Roundup to a field before harvesting wheat or other crops to kill the crop and facilitate harvesting. In our case preharvest loss, is the reduced quality and quantity of crop because of challenges such as crop disease or bad agriculture practices by the farmer due to lack of knowledge or information.

Moja Ride

Côte d'Ivoire

Founded in 2020

Employees 15

Industry Logistics

Website <https://mojaride.net/>

Moja Ride is a comprehensive mobility and payment platform that helps consumers find, book, and pay for all modes of transportation, including a single mobile app and a contactless Visa-enabled fare card. By integrating payment and mobility services, the service ensures reciprocity, with the payment function enhancing the mobility service and the mobility service facilitating the payment. It also has a function that allows end-users to exchange messages easily and quickly. The service is targeted at students and working adults, and with digital payment capabilities, the service is being expanded to include online shopping and travel. As the urban population grows, the need for mobility services and digital payments will continue to increase. By analyzing the number of farecard loads, the company will be able to understand how the service is being adopted and how many people are using it, and further improve the service.

Jean-Claude Gouesse

Jean-Claude Gouesse is a cybersecurity and computer network engineer. He holds a degree in Information Technology from DeVry University (Chicago, USA) and a degree in Risk Management from the National Polytechnic Institute (Yamoussoukro, Côte d'Ivoire).

TranSoniCa Ghana

Founded in 2020

Employees 23

Industry Finance

Website <http://transonicagh.com/>

TranSoniCa provides an efficient payment and settlement service by utilizing the contactless IC card technology circulating in Japan (similar to SUICA and other services). The introduction of the card-based payment method will (1) improve

payment efficiency by eliminating the need for change when paying in cash, (2) reduce the risk of cash theft by employees at stores where the system has been introduced, and (3) promote contactless payment as part of COVID-19 compliance. TranSoniCa believes that a cashless society is the only way to build a capital infrastructure. By drastically reducing the contact with paper money, TranSoniCa aims to prevent the threat of COVID-19 and other new viruses that may emerge in the future.

Daniel Elliot Kwantwi

Daniel Elliot Kwantwi is a master's student at the University of Tokyo. He is also the Kanto Region Manager of Kakehashi Africa (NGO), which aims to build bridges between Japan and Africa. He holds a B.Sc. in Agricultural Economics from the University of Ghana and a B.Sc. in Agriculture from Tokyo University of Agriculture and Technology. He is a teaching and research assistant in the Department of Agricultural Economics and Management at the University of Ghana. He has worked for companies such as Ohayo Ghana Foundation, Freight Links Logistics (FLL), Century Company, and The Prince Links Enterprise.

And Africa

South Africa

Founded in 2018

Employees 6

Industry Logistics

Website www.easycollectanddrop.com

And Africa provides Delivery service in South Africa using IoT lockers called ECD (Easy Collect & Drop). The company is addressing issues faced by both consumers and online retailers, such as high shipping costs, long waits at home to receive parcels, and increased risk of COVID-19 infection due to face-to-face interaction with couriers. Since IoT lockers prevent redeliveries that cost a lot, ECD offers their one-stop solution including last-mile delivery^{1*} to e-commerce businesses that

suffers from redeliveries. ECD 's locker technology streamlines the process of arranging deliveries required for regular PUDO services^{2*}, allowing ECD users to ship packages 24/7 at the lowest possible price and receive them without any fees.

*1 **Last-mile delivery:** The delivery segment from the delivery center to the user-designated destination is called the "last mile" as the last delivery segment. The term "last mile" is used in the logistics industry to refer to the "last section between the operator and the user.

*2 **PUDO services:** Abbreviation for Pick Up & Drop Off. In the U.S. and Europe, it is commonly used as a courier service in addition to a box service.

Yo Murofushi

Yo Murofushi worked at Deloitte as a management consultant in SCM and M&A. After starting his own company, he established a background in ecommerce business by launching an online marketplace for used Japanese cars in Tanzania and launching his own e-commerce site specializing in Japanese products. He is also committed to supporting African startups through direct investment and the establishment and operation of a matching platform called ZenVentures. He is challenging the last-mile delivery industry in Africa by leveraging SCM, finance, EC business, extensive network with African startups, and Asian H/W technology. Appy People Angola

Founded in 2015

Employees 10

Industry Health

Website <https://appysaude.co.ao/>

Appy Saúde has developed an application service that allows users to compare the location of pharmacies and medical institutions, the availability of medicines at each pharmacy and medical institution, and the prices of medicines. In particular, it was hard to ensure transparency of the medicine prices in the past, and in some cases, prices have differed by almost two times. With this service, price transparency

is ensured. Appy Saúde allows users to review any medical institution within their profile. This facilitates a two-way flow of information from the user to the provider, and the provider to the user. By focusing on the customer experience, they are helping to improve the services of medical institutions.

Pedro Beirão

Pedro Beirão is Co-Founder and CEO of the company and has extensive experience in project management, having worked at Huawei Technologies and TOTAL E&P Angola prior to founding the company.

E-msika Services Zambia

Founded in 2016 **Employees** 11 **Industry** Food and Agriculture
Website <https://www.emsika.com>

E-msika Services is a B2B2C online training and agricultural market platform. Farmers and retailers (Agro-Retailers*) across the country can easily and affordably find, purchase, and share information on agricultural products. The service also allows farmers to receive training on agriculture from experts. The company has already provided 1,600 e-commerce transactions in three years and 150 trainings in two months.

*Agro-Retailers: Retailers who sell agricultural products to end consumers after purchasing from producers or wholesalers.

About the Founder

Gilbert Mwale grew up as a subsistence farmer in Chipata, Eastern Province of Zambia, but while earning a master's degree in computer science in India, he witnessed how e-commerce changed the lives of the poor. Based on this knowledge and experience, he launched Zambia's first online agricultural marketplace with his long-time friend Elton Chirwa.

Eyone Senegal

Founded in 2015 **Employees** 13 **Industry** Health
Website <http://eyone.net/#homepage>

Eyone is a digital solutions provider which aims to provide more traceability of medical data, such as patient files, invoicing, physical/online appointments with patients. In Senegal, the lack of traceability of data has been a tremendous issue amongst healthcare professionals and patients. Moreover, some processes, such as communicating with insurance companies or conducting additional inspections, can be quite sophisticated. By implementing Eyone's service, administrative tasks and billing status can be easily tracked with their mobile device. Patients can also interact with their healthcare providers from their computers or mobile devices. Eyone currently has served 26 medical institutions, 100,000 claims for medical services, and 70,000 patient referrals.

About the Founder

Henri Gueye has won multiple titles such as Orange Entrepreneur Social, Orange FAB, 20 most promising startups in French-speaking Africa, and Most Valuable Company in XL Africa program. He has a partnership with Sanofi to share medical files between healthcare professionals and patients.

Farm Wallet Ghana

Founded in 2016 **Employees** 6 **Industry** Food and Agriculture
Website <https://www.farmwallet.me/>

Farm Wallet provides farmers with a mobile app that simplifies transactions on their existing bank accounts. Consumers can easily check farmers' production information on tablets installed in supermarkets and other nationwide agricultural product sales outlets. These functions will enable direct transactions between farmers and consumers and eliminate middlemen who charge high fees. Small-scale farmers in rural areas who do not have access to bank accounts can use the cashless mobile payment system, thereby creating a system that returns profits to the small-scale farmers.

About the Founder

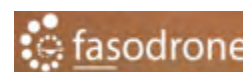

Muhideen Adam is the former CEO and Co-Founder of TROTRO Tractor. He is a young and hardworking entrepreneur who is leading the online business and smartphone app for TROTRO tractor*. He has also developed a portal that aggregates dealers and transport tractor owners.

*TROTRO tractor: A platform provider that connects farmers and tractor operators. It enables farmers to request, schedule, and prepay for tractor services, and operators to obtain requests for tractors quickly. FarWallet is a financial service that give small-scale farmers power to bank at their farm gate. The core of this business is to tackle and establish easy and flexible banking services and other Agriculture Services as well as the value and supply chain by eliminating middlemen who do not add value to the product but rather makes it expensive. In this way, prices of foods could be affordable for all.

Himore Medical Cameroon

Founded in 2014 **Employees** 14 **Industry** Health
Website himore-medical.com

Himore Medical developed Oxynnet, a medical oxygen production network that consists of multiple oxygen production stations connected to a single control system. Each station is located in a hospital and can produce pure oxygen concentrations ranging from 21% to 95%. The stations are capable of supplying oxygen to more than 10 patients at the same time and can also be remotely controlled via a phone analog line using an Android application. In Cameroon, medical oxygen was only available at referral hospitals and large clinics, but Oxynnet has made it possible to receive COVID-19 treatment at a low cost without traveling to urban areas. In recognition of this achievement, the company won the UNDP Cameroon New Coronary Measures Hackathon.

About the Founder

Zang Adzaba Marc Arthur is a Chief Engineer, Project Manager, and CEO, computer science engineer and biomedical engineering researcher. He oversees the business and mentors engineers responsible for software development and embedded systems development.

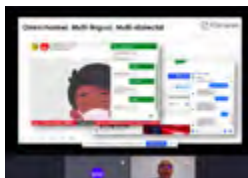

Contact arthurzang@himore-medical.com

IoT Communications Botswana

Founded in 2019 **Employees** 6 **Industry** Health
Website <https://www.iotcomms.co.bw>

IoT Communications provides an IoT¹ Low Power Wide Area Network (LPWAN)^{*2} service that monitors the geographic location of quarantine and protective surveillance targets. Using smart wristbands, the scope of an individual's activities can be analyzed remotely, aiming to improve the containment of COVID-19 infection and the tracking of infected individuals. The service is available on a pay-per-use or monthly subscription basis.

- *1 IoT: IoT stands for Internet of Things and is used to connect things other than computers to each other via the Internet. IoT Applications are used to provide functions based on data sent to the platform from sensor devices. It is becoming more and more common to add IoT functions, such as machine learning algorithms to analyze large amounts of cloud-stored connected sensor data.
- *2 LPWAN (Low Power Wide-Area-network): refers to a power-saving wide-area network that enables wireless communication over long distances with low power consumption. It is a wireless communication technology that has rapidly gained attention in recent years due to its suitability for IoT communication, and uses radio wave technologies such as LoRaWAN, Sigfox, ELTRES, and ZETA, based on LTE used mainly in smartphones.

About the Founder

Tefo Donald Seleka has more than 20 years of experience in the design, operation, and management of large-scale data communication networks. He has worked as a data networks manager for Botswana's largest mobile operator, Mascom Wireless. He has also worked for Nokia Networks, a large multinational company, where he held several project roles including pre-sales technical support, network planning and performance monitoring in the Americas region.

Magofarm Rwanda

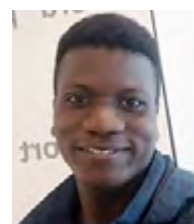

Founded in 2019 **Employees** 4 **Industry** Food and Agriculture
Website <https://magofarms.com/>

The company offers "Mobivet", a tele-veterinary service, which provides remote advice to help livestock farmers in Rwanda. Combining online and offline technologies, Mobivet can be accessed from any mobile device, regardless of the Internet connection. Mobivet aggregates knowledges and best practices both domestically and internationally, and is capable of providing these information via mobile messages 24/7 throughout the year.

About the Founder

Moses Katala is the Founder and CEO of Magofarm. He has experience in software development, project management, fundraising, and agriculture. In particular, his four years of experience in managing agricultural projects has been instrumental in the success of this business.

Contact mkatala@magofarm.co.rw

Myclinic.ng Nigeria

Founded in 2018 **Employees** 7 **Industry** Health
Website <https://myclinic.ng>

Myclinic.ng is an online, on-demand platform that enables users to remotely see and talk to a doctor at any time either using the mobile app (for smartphone users) or by dialing the smart number (for non-smartphone users). It minimizes self-treatment and self-medication by providing quick and easy access to qualified medical practitioners. The partnership with the Nigerian Ministry of Communication and Technology (NITDA) to integrate clinical laboratory data on the platform has greatly expanded the scope of what can be done with online medical care in Nigeria.

About the Founder

Aliyu Bello Aliyu is clinical pharmacist with a bachelor's degree in Pharmacy from Ahmadu Bello University. He is passionate about technology to improve healthcare access and effectiveness. He has significant experience in the design and implementation of technology-driven solutions for the-improvement of healthcare, especially in resource limited settings.

Contact myclinicng@gmail.com, ali@myclinic.ng

Nanofib Tech Egypt

Founded in 2020 **Employees** 4 **Industry** Health
Website N/A

Nanofib Tech produces environmentally-friendly disinfectants and sanitizers using nanotechnology. The company produces a variety of formulation types such as liquid, spray, gel, and powder. The products are made from a wide variety of natural materials rather than strong chemical, and have antibacterial properties against viruses, fungi, and bacteria. Users range from households to industrial sectors, especially front-line workers in the medical, nursing, food, industrial, and agricultural fields.

About the Founder

Dr. Wael Mamdouh is an Associate Professor of Nanotechnology and the leader of one of the largest research groups (biomedical polymer nanocomposites, hydrogels, and tissue engineering) at AUC, Egypt with more than 20 years of experience in Nanoscience and Nanotechnology, with scientific publications attracting approximately 4000 citations worldwide.

Outsource Now Zambia

Founded in 2016 **Employees** 6 **Industry** Finance
Website <http://www.zpos.co.zm>

The company offers, "ZPOS", which point of sale (POS) application that allows retailers to record and track various information. It has features such as recording sales, tracking credit customers, adding new inventory, storing post-payment transactions, etc. Users can record all their sales history and purchase transactions on their smartphones for free. For a monthly fee of US\$8, users can also subscribe to email newsletters and set up dashboard screens to receive a wider range of business support, such as monthly sales analysis and cost calculations. In the future, the company aims to provide credit rating scores to retailers based on historical transactions, which they can use to apply for loans.

About the Founder

Chisepo Chirwa has over 10 years of experience in computer software analytics and product sales. After studying computer science at the University of Greenwich, Chisepo worked in sales at Forever Living Products. He then moved to Syntek Global, where he was a top salesman in the Zambian office and a distribution consultant in the South African office. **Contact** info@zpos.co.zm

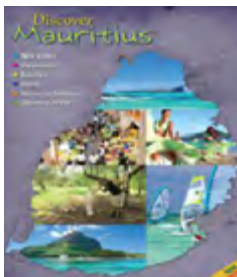

Panda & Wolf Holding Mauritius

Founded in 2017 **Employees** 5 **Industry** Others
Website <https://www.discovermauriti.us.app/>

Discover Mauritius™, provided by the company, is a travel guide and tourism media service for tourists and locals who want to listen to traditional music and experience the culture of Mauritius for free. Recommended tourist attractions are displayed according to the user's location, and the user is notified of various information via push notifications. In addition to the offline travel guide application, it also includes an online radio function.

About the Founder

Lord Brian Dean founded Panda & Wolf Holding in 2017 and hosted the first ever Games & Animation Conference in Mauritius in 2019. He also released Eco-warriors™, a mobile game for children to learn about environmental issues such as deforestation and waste, which was supported by UNESCO (United Nations Educational, Scientific and Cultural Organization).

Rology Egypt

Founded in 2018 **Employees** 26 **Industry** Health
Website <https://rology.health>

Rology aims to address the health inequality challenge in Africa, especially the shortage of qualified radiologists. With Rology's AI-assisted teleradiology platform, they can deliver accurate and timely medical reports so that emergencies can be handled in time. They currently support 100 active scan centers and hospitals in Africa, including mobile clinics that reach disadvantaged communities in remote areas who are days away from the nearest hospital. They have also developed an AI model that can detect possibilities of COVID-19 through CT-Scans, so that suspicious results found by radiologists can be then raised to appropriate medical professionals.

About the Founder

Amr Aboraiaa has extensive experience in business development, resource mobilization, expansion into new markets, and investor management. He graduated from the Faculty of Engineering at Alexandria University. He also holds a certificate in Business Management from the Arab Academy for Science, Technology and Maritime.

Contact brian@panda-wolf.com

Route Masters Nigeria

Founded in 2019 **Employees** 8 **Industry** Logistics
Website <https://www.route-masters.com>

Route Masters is a freight management platform that automates the dispatch and transport of vehicles according to routes. It is built using machine learning and applied mathematics, leveraging telematics*1 and aggregated data from multiple dispatch and transportation management systems. A Number of unscrupulous dispatchers is still a social issue in Africa, and Route Masters will help to alleviate it by managing the data flow of dispatchers. In addition, given Africa has the lowest usage rate of dispatch applications in the world, the accumulation of databases among public transport, shipping, and logistics operators, will not only expand the company's services but also help accelerate the digitization of the logistics industry.

*1 Telematics: Method of monitoring cars, trucks, equipment and other assets by using GPS technology and on-board diagnostics (OBD) to plot the asset's movements on a computerized map. Also known as fleet tracking or GPS vehicle tracking, telematics is now an essential management tool for many commercial and government fleets.

About the Founder

Seye Odukogbe holds a Master of Engineering degree from Queen Mary (University of London) and an MBA from Oxford University. He has over 10 years of experience in international multimodal transportation projects, including Nigeria's first bus rapid transit. He has also designed some of the most extensive transport data projects in the history of the region in Lagos, Kaduna, and Kano. Africa is the last place on earth with low use of mobile transport apps. Using GNSS, telematics and a fusion of other data sets, we utilize machine learning and applied maths to build, automate and deliver mobile transport along with route and fleet management applications. Our customers are public transport, fleet and, logistics operators and, a massively growing user base in African cities with high amounts of informal transport.

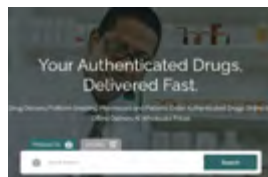

Contact seye@route-masters.com

RxAll Nigeria

Founded in 2016 **Employees** 37 **Industry** Health
Website <https://rxalldelivered.com/>

The company's RxDelivered is Africa's largest drug supply platform for both patients and healthcare providers. Pharmacists can purchase authentic medicines at wholesale prices from the wholesale network on RxAll. Patients can also use RxDelivered to save time and transportation costs by eliminating the need for patients to visit drugstores and pharmacies. In addition, patients can purchase proper medicines and avoid counterfeit products in circulation. Furthermore, due to increased user experience, wholesalers can expect an increase in sales, business areas, and recognition.

About the Founder

Adebayo Alonge decided to become a pharmacist after an experience in which he was knocked unconscious for three weeks by counterfeit medicines. He has 10 years of experience working as a developer in the pharmaceutical industry in West and Central Africa. During that time, he developed new businesses in the pharmaceutical industry totaling more than US\$100 million in sales.

Solar E Cycles Kenya

Founded in 2015 **Employees** 6 **Industry** Logistics
Website <https://www.solar-e-cycles.com/>

Solar E Cycle offers a transportation service, Try Ke, which aims to bring economic empowerment to developing countries through its pay as you go* business model. The vehicle can travel at speeds of 25 to 45 kilometers/hour, and can travel 50 to 100 kilometers per day on solar energy alone. Excess energy is stored in batteries, which can also be used for lighting at night. In addition Try.Ke vehicles can be leased for US\$0.5 per day for three to five years. It provides affordable transportation and nature-friendly electricity to the poorest of the poor, who earn only US\$2 per day.

*Pay as you go: A method of paying for a service only as you use it. It is linked to mobile payments (M-Pesa) by paying a small deposit, equivalent to one-tenth of the price of a motorcycle in Kenya.

About the Founder

Roger Christen has an MBA in Industrial Engineering, 30 years of experience in international development, and 13 years of experience with Pricewaterhouse Coopers, where he worked in private sector development and economic recovery, particularly in the power, water, mining, privatization, and growth industries sectors. He is a recipient of the World Bank Excellence Award Africa 2007 and other awards including the Valeo Innovation Challenge.

Tanzania Maji Jibu Tanzania

Founded in 2017 **Employees** 29 **Industry** Food and Agriculture
Website <http://www.jibuco.com/tz>

Tanzania Maji Jibu provides a turn-key* safe drinking water franchise service. The company has developed a business model that allows customers to pay per liter rather than an upfront purchase and has already established a network of 20 community-based franchises that are growing rapidly across the country. The company brings advantages to users including financing, onboarding, continuous support to owners and staff; a production line and system; a high-visibility retail front; recognised branding and patented bottles; consumable inventory with economies of scale.

*Turn-key: An expression meaning "turn the key and you're ready to go," referring to a form of delivery in which a product is delivered to a customer in a ready-to-use condition.

About the Founder

Tayeb Noorbhai has experience in setting up social enterprises in Tanzania. He holds an Honours degree in Development Studies from the School of Oriental and African Studies (SOAS), University of London. He holds a Master's degree in International Development from Oxford University. During the past decade, he has worked in various companies in the education, health, and drinking water sectors, and has also been involved in new business creation. **Contact** tanzania@jibuco.com

Toolboksi Technologies Tanzania

Founded in 2018 **Employees** 7 **Industry** Others
Website <https://www.toolboksi.com/>

Toolboksi is a B2C technology platform that provides stable job opportunities for workers in the informal sector, enabling them to improve their skills and advance their careers. It serves as a link between households/businesses that want to repair their equipment, and handymen (repairers and handymen) who perform the repair, installation, and maintenance. Learning and training sessions are held once a month so that the handymen can obtain the knowledge and skills needed to deliver the service. Various training such as job-specific tutorials, digital literacy training, and systems through soft skills ensure the continuity and quality of repair, installation, and maintenance services.

About the Founder

Julius J Mbungu II is a social entrepreneur who has worked in the technology industry. In particular, he has contributed to the development of products that combine building materials with innovative technologies. He works with various organizations in Africa as well as globally to support entrepreneurship and TVET (Technical and Vocational Education and Training) activities.

Contact julius@toolboksi.com

TradeBuza Nigeria

Founded in 2018 **Employees** 15 **Industry** Food and Agriculture
Website <https://www.tradebuza.com>

TradeBuza provides a data management mobile platform that which utilized technology to streamline transactions among multiple farmers. The platform allows farmers to manage and track their data from pre-production planting to harvesting, and through to supermarket and retailer transactions. Users can also digitize their own profiles, farming activities, and post-harvest tracking history. The company contracts with a wide range of clients, from agricultural lenders and insurance companies to government agencies and NGOs that require last mile operational data*. This is because it is necessary to engage with a variety of stakeholders in order to build a system that appropriately distributes profits to producers in each production area.

***Last mile operational data:** Operational data regarding the last segment of the process of delivering goods and services to an end consumers. Accumulating and analyzing these datapoints would allow recognition of where the bottlenecks are within the ecosystem (harvesting, shipping, delivery), and alleviating such issues could reduce the financial burden for various players.

About the Founder

Nonso Eze is the Co-Founder of TradeBuza. He has experience in leading the digital banking division at Riby, a Nigerian FinTech company, and as an operations manager at Venture Garden Group. TradeBuza digitizes last mile operations for agribusinesses. We help these businesses digitize their smallholder and farmland profiles, farm activities and post harvest ops tracking. TradeBuza also caters to a broad spectrum of clients ranging from large growers, food corporations, ag-buyers, ag-financing, and insurance companies, to governments and NGOs who require key last mile operational data to engage these agribusinesses.

Message from the Japanese company provided the special award

Mobility54 Investment SAS / Toyota Tsusho

Takeshi Watanabe

CEO, Mobility54 Investment SAS
Group Leader, Mobility Service Group, Toyota Africa Automotive Division

Toyota Tsusho, which operates in 54 African countries, is actively investing in and financing partners that develop innovative technologies and services in Africa, where a "leapfrogging cycle" is occurring through Mobility54, an investment subsidiary established at the end of 2019 in addition to its existing businesses such as automobile assembly and sales.

As a special award at this event, we have decided to invest US\$50,000 worth of convertible bonds in Moja Ride from Cote d'Ivoire.

Moja Ride is contributing to a drastic improvement in the quality of transportation services in Cote d'Ivoire by providing reservation and search functions across multiple transportation modes and mobile payment functions for the informal transportation industry in the country. By combining Moja Ride's new services with our automotive business, we will accelerate the digitalization of the African transportation industry. In addition, we will continue to work closely with JICA to support passionate entrepreneurs in Africa under the "With Japan" initiative.

Investing in Moja Ride (Cote d'Ivoire) through subscription to a convertible bond US\$50,000

AAIC (Asia Africa Investment and Consulting Pte Ltd)

Shigeru Handa

Director

AAIC manages the Africa Healthcare Master Fund, an investment fund that focuses on investments in the healthcare sector in Africa, and is currently investing in 25 companies. Nigeria's pharmaceutical distribution market is estimated to be worth US\$2 billion, and is expected to continue its growth at 10% CAGR due to population and economic growth. On the other hand, there are major issues such as counterfeit drugs, price uncertainty, weak logistics, etc. I felt that Lifestore Healthcare has a business model to solve such issues by using its unique innovative digital solutions. In Africa, innovative startups that solve social issues are growing steadily. We will continue to collaborate with JICA and the local startup ecosystem in order to create as many startups as possible like the ones that participated in the final round, and to contribute to building a system that will help them grow into global companies.

Providing Mentoring Opportunities to Lifestore Healthcare (Nigeria)

Rakuten Group

Shotaro Yamanaka

Rakuten Group
EMEA Rep.

Six-month mentoring opportunities provided by executives to TranSoniCa (Ghana)

As a Global Innovation Company with a mission to empower people and society through innovation and entrepreneurship, Rakuten is involved in a variety of initiatives focused on creating a more sustainable society and contributing to the achievement of the SDGs targets.

The winner of this award will receive Rakuten's support to further accelerate its business through mentoring opportunities with executive officers and other business professionals, leveraging our range of experience and professional expertise. Headquartered in Ghana, TranSoniCa was selected for this award due to its ability to provide safe and secure payment services through cashless cards, which is of great social significance. Rakuten is in the process of developing our Fintech business globally, and we are excited to share our experience with TranSoniCa to benefit the Ghanaian community. We also recently announced the signing of a comprehensive cooperation agreement with JICA and look forward to creating opportunities for development in various countries and regions around the world through this collaboration.

Stirling Engine Japan

Koji Yamada

President and CEO

Providing And Africa with an ultra-cool logistic box that can also carry coronary vaccines (South Africa)

We are a company that develops and manufactures cooling systems using Stirling engines. This ultra-cooling logistic box has a double function of +30 degrees at the top and -86 degrees at the bottom, and it can be used for a wide range of applications from frozen transportation of living organisms and corona vaccines to food distribution. The reason why we awarded a special prize to And Africa is because we want to support their last mile business and contribute to Africa through frozen logistics.

ACCESS

Jyunichiro Hayashi

General Manager,
Sales Department,
Sales Division

Signed MOU with And Africa (South Africa) for business collaboration

We are a research and development-oriented company that focuses on software development to solve the problems of society and customers with our advanced technological capabilities under the vision of "connecting all things to the Internet".

We selected And Africa because we are very interested in their IoT lockers, which provide a contactless means of receiving packages at any time and eliminating the need for redelivery. This is an issue that needs to be solved not only in Africa, but also in other regions, and we expect that it can be greatly developed.

Our company is in the process of concluding an MOU for business collaboration in order to jointly develop business in South Africa, and we are considering expanding our services to include location-based management solutions.

It was refreshing and great to see a Japanese entrepreneur competing on the same stage as African-local startups. I also hope that the businesses that are starting in Africa will expand their services to Asia and other regions.

COLABO Management Matching App

Shinichiro Oikawa
Representative

Prepared interview articles and distributed them to our members for And Africa (South Africa) and Appy People (Angola)

Our company operates the largest business matching application for executives in Japan. We also co-host pitch events with Nomura Securities. This time, we conducted interviews with AndAfrica and AppyPeople, and distributed the articles to our membership audience, corporates who participated in this competition, as well as our investors. This time we selected AndAfrica because of their commitment to solving social issues together with their Japanese and African members. In addition, AppyPeople is a venture company that solves important life-threatening medical issues in Africa, and we wanted to share their activities with the people of Japan. The level of competition in the final round was very high, and we had a hard time selecting for the special award. We hope that the number of actual cases will increase as the contact between Japan and Africa continues to grow.

Africa Capital Partners

Keiji Misaizu
Representative Partner
General Incorporated
Association Mpata Fund
Duties Executor

Signed MOU with And Africa (South Africa) with a view to invest in the company

We have established a fund based on an anonymous partnership agreement with the aim of contributing to the economic development of African countries, as well as establish strong partnership between Africa and Japan. We will promote open innovation by communicating the appeal of Africa to Japanese investors and investing in startups. This time, we have signed a MoU to invest in AndAfrica, which is developing a last mile delivery business using IoT lockers mainly in South Africa. The fund that we are managing focuses on start-ups in the agriculture sector, especially targeting logistics-related tech companies. We have been working with AndAfrica for almost three years, providing support for our fund-related business trips to Africa and helping to select investment targets, and we are familiar with the sincere management attitude of Mr. Murofushi. We have been hoping to provide support to Mr. Murofushi since he started his business challenge in South Africa, and we took the opportunity of this pitch contest to conclude an MOU with him. The companies that made it to the final round were all very attractive. I was particularly impressed by the fact that each company was involved in activities aimed at solving social problems and was able to make it work as a business. I felt that Africa has an environment where "Sustainable Capitalism" and business success can coexist with each other, which is similar to the concept of "Rongo to Soroban" in Japan (as one of the judges pointed out). I would like to see each company continue to put this into practice in the future.

Meet the Organizers

Message from JICA/Nikkei/DFP

Organizer

JICA

Thank you for taking the time to read this booklet. The entrepreneurs listed here are the winners of the Japan International Cooperation Agency's (JICA) Business Plan Competition contest in 19 African countries. With the spread of COVID-19 in Africa, threats to life and health, and the beginning of economic stagnation, in July 2020 JICA began accepting applications for business plans that respond to social and economic changes in each country and received more than 2,700 applications.

Africa is facing a variety of social issues, and administrative services are not as well-developed as in Japan. In such an environment, entrepreneurs are promoting solutions to these issues by launching innovative businesses with a thorough understanding of the needs on the ground, recombining existing technologies, and creating new services using cell phones. On February 26, 2021, we co-hosted a final competition with Nikkei Inc. where 10 more companies were selected from among 69 outstanding companies, and Japanese companies were able to offer investment and business collaboration. We hope that this business

Kenji Katai

Japan International Cooperation Agency (JICA)
Senior Director, Economic Development Department

Graduated from the Department of Architecture, Graduate School of Engineering, Kyoto University in 1998 and joined JICA. In 2004, he graduated from Columbia University's Graduate School of International Relations and Public Policy with a major in international economic policy, and worked in the Philippines, India, and the Planning Department before assuming his current position. He has promoted industrial development in Africa, Latin America, the Middle East and Europe, and launched a start-up support project (Project NINJA: Next Innovation with Japan) in January 2020.

plan competition contest will provide an opportunity for entrepreneurs to grow and for Japanese companies to expand their business to Africa. JICA, the centralized agency for Japan's Official Development Assistance (ODA), considers entrepreneurs to be important development partners and will continue to support the growth of these companies and collaborate with Japanese companies under the name of Project NINJA (Next Innovation with Japan). Let's take a new step together.

Nikkei

I was driving along a reddish-brown road in Africa after a rainy day when I fell into a ditch with my car. The neighbors gathered around, but there were no tow ropes, no mats or boards to put under the tires. Such a situation is probably common everywhere that is outside of urban areas.

The digital revolution is taking place in Africa, where there has been overwhelming shortage of goods and services until this day. The driving force is the rapid spread of smartphones and the enthusiasm of entrepreneurs who want to do something about the status quo. There is now an eco-system available to meet the needs of society and solve its problems.

In order to communicate the current state of Africa to a wide range of readers, the Nikkei joined forces with the Japan International Cooperation Agency (JICA) to hold the "NINJA Business Plan Competition". In addition to the interest shown by many readers, it was impressive to see the extremely high participation rate of the younger generation (20-30 years old). I believe that these African

Senior Producer, Media Business Planning and Development Office

Graduated from Waseda University, Faculty of Political Science and Economics in 1990, and joined Nikkei Inc. He has covered macroeconomics, economic and fiscal policy, and financial markets, etc. He served as the Brussels bureau chief and the European correspondent of the European editorial office from 2005, a deputy news editor of international division of the Tokyo headquarters editorial office in 2009, and a deputy news editor of the economic and financial division of the editorial office in 2010. He was GM of Nikkei Europe (London) in 2014 and VP of Nikkei America (New York) in 2017, planned and managed the East Africa Tech Tour in 2019, and has been running participatory web seminars on African tech since then.

entrepreneurs, whose passion lies in developing new technologies instead of vested interests, appears as a charismatic figure for the younger generation. Let's start by taking a hard look at the current African economy without preconceptions.

Double Feather Partners

There is a saying that goes, "Necessity is the mother of invention". This means that new inventions and innovations are born out of inconvenience and necessity. In this sense, it's natural to see innovation occurring not only in developed countries, but also in the most difficult and harsh environments. Looking back, many of the great entrepreneurs who created Japan's leading global companies were born when Japanese society was at its most impoverished state.

With a declining birthrate and aging population, Japan will not be able to maintain its position as the world's third largest GDP for much longer. On the other hand, a quarter of the world's population will be African by 2050. The key question is how to reverse-engineer the future growth potential in African economy and implement it into the corporate strategy. For Japanese corporates to understand this, it is essential to look at how local entrepreneurs define the problems and identify the business opportunities in Africa. We hope that you will gain first-hand experience of the current startup trends in Africa, which is historically and culturally the farthest

Investment for a total of 5 million yen and provision of consulting services to UPEPO (Kenya)

Kohei Muto

Double feather Partners
CEO

After graduating from boarding school in the U.S., he graduated from Tsukuba University. He worked at Morgan Stanley, where he was responsible for more than 30 cross-border transactions totaling approximately 3 trillion yen. After that, he worked in Israel and Palestine for the Private Equity Investment Division of the United Nations, where he was in charge of investments in renewable energy and financial institutions in the Middle East. Currently, as CEO of Double Feather Partners, he provides venture capital and strategic advice to companies operating in Africa to solve social problems in developing countries through business. He is a member of the Africa Business Council, an advisor to the Cabinet Office's Public-Private R&D Investment Expansion Program and Acceleration Program, and a Global Mentor for the 500 Startup.

from Japan, and that it will be a source of new discoveries and insights for you.

Our company specializes in supporting Japanese companies to develop markets in Africa, and to provide investments for promising local startups. If there is anything we can do for you, please feel free to contact us.

Reasons for selection:

The award was given because it was judged that the project would solve the problem of water supply management in Kenya using digital technology, and at the same time, there was a wide range of collaboration with peripheral areas, such as linking with payment systems, and there was a high level of synergy with our existing investment companies.
