Heavy Equipment Maintenance

Mr. Tsunabuchi Masaki is checking the condition of heavy equipment and its parts with CMAC Staff in CMAC Central Workshop in Battambang. Equipment for demining activities is damaged by blasting operation. If the maintenance of equipment is not appropriate, a life of operator will be in danger and repair cost will be higher than maintenance cost.

Mr. Tsunabuchi Masaki (middle) and CMAC staff of Central Workshop in Battambang. There are still remaining a lot of mine and unexploded bomb in Cambodia, especially along Thai border including the area of Battambang province.
