<tbody>
<tr>
<td>To understand the general process of waste collection, intermediate treatment and final disposal and laws and regulation of the solid waste and industrial waste in Japan.</td>
<td>Central and local government and other public organizations, in charge of solid waste management and introduction of waste power generation.</td>
</tr>
</tbody>
</table>
| To find solutions for improving the solid waste management and material circulation in the participants' countries. | 1. technical officers in charge of solid waste management in the central/local government and more than 3 years experience.  
2. be a university graduate, majoring in civil, environmental, chemical and other engineering, or the equivalent |

### Outcome

1. To prepare the country report on the solid waste management.
2. To understand the Japanese technologies on the solid waste management, to study the present status of solid waste management, and to identify their solutions.
3. To consider the possibilities for introducing the waste power generation in terms of the points below, by learning the technology and management method on the waste to energy facilities:
   a) Relation between waste composition and the volume of power generated.
   b) GDP.
   c) Means of training and recruitment of staff.
   d) Construction cost of the facilities.
   e) Combination with other intermediate facilities, e.g. transfer station, recycling facilities.
   f) To understand the pros and cons for introducing the waste power generation plant.
4. To make the action plans considering the decision making procedure in the Target Organization.

### Target Organization / Group

Central and local government and other public organizations, in charge of solid waste management and introduction of waste power generation.

### Target Countries

Participants

### Sector

Environmental Management / Urban Solid Wastes

### Sub-Sector

Global Environment

### Outline

The purpose of this training course is to learn fundamental knowledge on waste power generation and on the solid waste management regarding waste incineration for power generation.

### Language

English

### Course Period

2017/11/05 ~ 2017/12/02

### Department in Charge

Global Environment Department

### JICA Center

JICA Yokohama

### Cooperation Period

2017 ~ 2019

### Objective / Outcome

1. To understand the general process of waste collection, intermediate treatment and final disposal and laws and regulation of the solid waste and industrial waste in Japan.
2. To find solutions for improving the solid waste management and material circulation in the participants' countries.

### Contents

1. Activities in advance
   - To prepare the country reports.
2. Main contents
   a) the solid waste management in Japan.
   b) the laws and regulations concerning the environmental issue.
   c) the laws and regulations concerning the solid waste management in Japan.
   d) the types of incineration plant.
   e) the system of waste power generation.
   f) the present status on the thermal recycle in Japan.
   g) the high efficiency waste power generation technologies.
   h) the volume of power generated per one ton.
   i) the utilization methods of the thermal energy.
   j) the types and roles of certificate for managing the waste-based power generation facility.
   k) the procedures of the construction of the facilities.
   l) the subsidization scheme for construction of the facilities in Japan.

### Remarks and Website

Under Planning
