To solve the declining quality of teachers for basic education, participants who serve as core actors in teacher education field will analyze their problems and learn from the system and ways of teacher training in Japan, and will create feasible action plans which will be shared in their duties after the training.

**Objective**

Targeting teacher education institutions for basic education (PRESET and INSET), and/or Administration which is responsible for teacher education, participants will discuss and analyze for the improvement of quality of teachers. They are expected to share the knowledge and experiences learned from the lectures and site visits through their action plan.

**Outcome**

Module1: Analyse current situation and problems regarding teacher education in participant’s country.
Module2: Understand the teacher education system in Japan, and its function and role at administrative level.
Module3: Understand the management and administration of teacher education in Japan at regional level, as well as school level.
Module4: Design and plan a rational and feasible action plan for participant’s country.
Module5: After the completion of training, participants share the action plan with his/her organization and make strategies to implement the plan.
