Industry to enhance practical teaching capacity in vocational school, polytechnic-school, technical college and high school. The purpose is to solve problem of "missing middle" in the developing countries by means of HRD in electrical and electronic engineering which is a main social infrastructure.

Outline

**Objective**

Aiming at elimination of technological gap between education and the field site in the electric and electronic fields, this training course will ensure that participant’s organization shares proposed improvement of education in vocational training schools, polytechnic institutes, and industrial high schools to enhance their training capability.

**Outcome**

1. Understanding of personnel training and history of electric industries in Japan, vocational training, and education in companies to identify your own country’s issues.
2. (Electric) Understanding of basic element technologies such as relay sequence control through lectures and practices.
   
3. (Electronic) Understanding of basic element technologies of electronic circuits and robot control through lectures and practices.

3. Preparation of improvement plan of education to solve the issues in your organization in order to propose the plan to the organization

**Contents**

- Learning of electric industry’s history and vocational training systems through lectures or visits to companies. Learning of actual vocational training in Japanese polytechnic institutes and public institutes and companies.
- Acquisition of basic electric and electronic technology. Understanding of various motors, understanding of electric/electronic measuring technology and microcomputer technology, and acquisition of these technologies through operation of testing equipment.
- Acquisition of applied electric and electronic technology.
- Identification of problems that your country or organization faces and submission and implementation of the solutions to the problems.
