

Improvement of Maternal Health for French-Speaking African Countries (for government officials) アフリカ仏語圏地域 妊産婦の健康改善(行政官対象)		Continuing	
Target Countries :French Speaking African Countries			
Course No. :J1804206		No. :1884450	
Sector :Health/Maternal and Child Health/Reproductive Health			
Sub-Sector :Health/Health System			
Language :French			
Outline			
Succeeding the Millenium Development Goals (MDGs), Sustainable Development Goals(SDGs) continues to weigh emphasis on the reduction of maternal mortality rate (MMR). This program is designed to learn Japanese maternal newborn and child health system/policies and the concept of "continuum care," targeting the African Region in order to improve maternal and newborn care.			
Objective/Outcome		Target Organization / Group	
【Objective】 The participants will acquire the ability which enable them to make suggestions for the refinement of their/their organizations' task to contribute to the improvement of maternal and newborn child health of their countries based on the concept of "Continuum care." 【Outcome】 1. To analyze the gaps and bottlenecks in maternal health in participants' countries 2. Identify the suitable approaches of "Continuum care" for participants' countries, considering Japan's Global Health Policy. 3. To discuss the experiences of maternal and newborn health services of each country and suitable approaches of "Continuum of care" to improve maternal health in participants' countries. 4. To prepare discussion notes on the findings including recommendations on the improvement of maternal health through "Continuum of care" in participants' country.		【Target Organization】 National or Regional Governmental Health Administration 【Target Group】 ・Governmental officials who are in charge of planning / implementing maternal health program at national or regional level ・To have a minimum of 5 years of experience as an official mentioned above. ・Medical professional (MD, Ns, MW etc.)
