Objective
Participants are able to formulate and implement problem solving plans which are necessary to enhance capacity of the fishers' organizations for responsible fisheries.

Outcome
1. To be able to acquire basic knowledge on sustainable fisheries development.
2. To be able to understand coastal fisheries resource management system as well as roles, responsibilities, collaboration of fisheries administration and fisheries cooperatives in Japan.
3. To be able to understand multifunctional roles and effectiveness of the fishers' organizations through case studies in Japan and overseas.
4. To acquire problem analysis and solution finding skills to effectively support fishers' organizations.

Target Organization / Group
[Target Organization] Fishery Administrative Organization, Fishery Extension Organization, Fishers’ Organization
[Target Group] Officers working at Fishery Administrative Organization/ Fishery Extension Organization/ Fishers’ Organization

More than 3 yeres of job experiences

Outline
This training program offers participants to learn how to enhance capacity of the fishers' organizations by introducing fundamental requirements of the organization as well as basic knowledge for the fisheries resource management. The program aims participants to gain knowledge to support fishers’ organizations in conducting resource management and collective business activity proactively by themselves.
