

Efforts toward ISO Certification

JICA is active in its efforts to address environmental problems, striving for a level of environmental conservation that envelops all of human life in concert with sustainable development. On April 1, 2004, JICA announced details of the Agency's Environment Policy as a first step toward the full-scale implementation of its environmental management system. As a part of its ongoing environmental endeavors, JICA's domestic organization achieved ISO 14001 certification in 2005, and successfully received a renewal of its ISO certificate in 2007 and 2010.

About ISO 14001

The International Organization for Standardization (ISO) formulated ISO 14001 as a global standard for the construction and operation of environmental management systems. It was established against the recent background of enormous concern over environmental issues. The standard calls for organizations to prevent and reduce the environmental burden generated by their activities and to consistently engage in activities that benefit the environment through the plan-do-check-action (PDCA) cycle.

Environmental Efforts

JICA places the utmost importance on efforts that incorporate concerns for the environment. This emphasis is the linchpin of its Environment Policy.

Basic Principles

JICA will implement and continually improve its environmental management systems in order to prevent and lessen the environmental burden generated by its activities. These initiatives will be based on the mission outlined under the Act of the Incorporated Administrative Agency—Japan International Cooperation Agency, namely, “to contribute to the promotion of international cooperation and to the sound development of Japan and the international socioeconomy by contributing to the development or reconstruction of the economy and society, or economic stability of overseas regions which are in the developing stage.” These efforts will also be made in conjunction with contributions made toward preservation of the global environment while strictly observing environmental laws and regulations.

Promotion of Environmental Measures through International Cooperation

As an organization that provides ODA, JICA promotes projects based on Japan's aid policies that contribute to the preservation and improvement of the environment.

- Promotion of international cooperation that contributes to environmental conservation in developing countries
- Efforts related to climate change [→ Refer to page 108]
- Reduction of the environmental impact of development projects through adherence to guidelines that take into consideration environmental society [→ Refer to page 158]

Promotion of Environmental Education

JICA strives to accumulate knowledge and information related to the environment and to increase people's environmental awareness.

- Educational and awareness activities through an introduction to JICA's environmental efforts
- Proposal and implementation of ongoing surveys and research regarding environmental issues
- Provision of ongoing education and training through seminars and briefings for JICA's directors, officers, employees and persons engaged in the Agency's work

Promotion of Environmentally Conscious Activities in Offices and Facilities

JICA promotes environmentally conscious activities in an effort to reduce the environmental burden generated by its work and projects.

- Promotion of waste reduction, resource and energy conservation and resource recycling activities
- Promotion of the environmentally conscious procurement of goods under systems such as the Law on Promoting Green Purchasing

Adherence to Environmental Laws and Regulations

JICA strictly complies with environmental laws and regulations to which it is subject.
