Invest India Micro Pension Services	Invest India Micro Pension Services (IMPS) is the only social enterprise in the world focused exclusively on capturing and enabling low income informal sector workers to accumulate micro-savings for their old age. IMPS was promoted in late 2006 with initial seed capital from SEWA Bank, UJI AMIC, Jayashreekesh Vyas, Renuka, Jharkhola, Gaxtam (Shrawati), Vijay Manojan, Vijayalakshmi Das, and Ashish Aggarwal. IMPS has developed a proprietary Micro Pension model as well as a scalable and streamlined, technology-enabled platform, capable of delivering a range of non-credit financial services to the working poor at an affordable transaction cost. Through independent contract agreements, IMPS delivers personal products with UJI, India's largest AMC, and with LIC, India's largest life insurer. IMPS delivers these products in collaboration with national and regional banks, microfinance institutions, employers, self-help groups, NGOs, cooperatives, worker associations and unions. Individual clients transmit periodic micro-savings to IMPS product partners using secure, cashless micro-payment instruments including their bank accounts, prepaid cards or mobile wallets. Through its Micro Pension model and its pan-India outreach partnership network, IMPS is building a social security marketplace to enable millions of low income workers with modest savings to access customized personal and insurance products in a secure, affordable, convenient and well-regulated environment. Kudus Finance & Investments Pvt Ltd	Kudus Finance and Investments Pvt. Ltd. is a Non-Banking Financial Company (NBFC) formed with a goal to help finance small-scale urban businesses through the medium of unsecured loans. Its loan services include MSME Loans, Business Loans, Machinery Loans and Short Term Loans. Businesses viable to be financed by Kudus include shopping stores, garment shops, wholesaler, retailers, distributor, trader, salons, allied dairy, hotels & bakery, home-based enterprise, shops and others which are the drivers of economic growth. In the economy there exists a funding gap between microfinance and other NBFC and banks that can be filled by a formalized lending process to micro and small enterprises. This gap is referred to as the 'missing middle' market and KU-DOS seeks to address this gap through its business models and products. Empowering small-scale businesses financially through the medium of MSME Loans, Business Loans, Machinery Loans and Short Term Loans and in turn bridging the 'missing middle' in the economy is its priority. Samastha microfinance	Samastha Microfinance Limited began operations in March 2008 with an aim to provide financial services to the financially weaker sections in the southern and western states of India. Samastha believes inclusion and achievement of the working poor across India, by providing financial and non-financial services, in a sustainable long-term relationship and enable them to achieve a better quality of life. As a business correspondent, Samastha uses its market know-how and accessibility to the rural and semi-urban BOP families in India to bring microfinance services like micro-loans, credit-linked insurance, group-based savings accounts etc to their doorstep. Samastha, as a Non-Banking Financial Company, believes that the way forward lies in microfinance which empowers individuals and enriches communities. By alleviating financial stress among the poor and offering an opportunity for income generation, it helps improve the quality of life. The micro-loans can be used to pay off outstanding debts borrowed from local moneylenders at very high interest rates, start small businesses, pay educational expenses and for emergency health services, which are the primary requirements of the people we cater to. Varthana	Varthana aims to meet the needs of affordable private school owners by providing loan capital so they can expand their infrastructure, invest in teacher-training, and introduce new learning methods into their classrooms. Varthana's work aligns with the UN's Sustainable Development Goals and agenda. Varthana partners with owners of affordable private schools to substantially increase access to quality education in low income communities. The relationship quite often begins with financial assistance based on a customized cash-flow underwriting model. Access to credit remains a central need for the sector. The loans are used for infrastructure, training, new materials and so on. Beyond loans, Varthana empowers schools to strategize offerings around the well-being of the child, especially with increasing parent expectations and many more schools to choose from. Varthana understands the daily challenges and the busy schedule of a school owner. And so customizing and delivering these products and services are a band of relationship managers who visit the school, spend time with the leadership to ensure a smooth and convenient process. Audcor Cardiomedics	The Audcor technology is encapsulated, manufactured and tested in one of the world's most modern manufacturing facility certified under the ISO 13485:2016 quality management system. They develop a small cluster of biomedical sensors to improve accuracy and precision in diagnosis of diseases. Most diagnostic techniques have very poor sensitivities and specifically requiring multiple diagnostic tests for reconfirmation and these tests are located at superspecialty locations. It cut down the inaccuracies by concurrently obtaining multiple but orthogonal biophysical signals to give a much higher degree of sensitivity and specificity to diagnosing diseases. Its first product is a cardiac analysis product that has a higher degree of precision than most diagnostic procedures for heart failure and is easy to use even by a 10th grade kid. Clinical studies conducted and published have been the basis of our claims and are being produced to the USFDA and EU regulatory bodies for their approval to market. Prototypes in limited quantities have been tested in workflows in rural areas and we have performed screening tests at 22 minutes per population. Cost per test is estimated to be around Rs. 500 for the patient.	Healthcare	Diagnostics	2016	Bengaluru	1	<a href="http://www.audcorcardiomedics.com/">http://www.audcorcardiomedics.com/</a>

Dial 1298 Ziqista	Dial 1298 for Ambulance, delivered by Ziqista Health Care Limited (ZHC) strives to deliver a nationwide network of Life-Support Ambulance Service accessible to anyone, anytime and anywhere through an easy to remember four-digit telephone number. Ziqista Health Care Limited (ZHC) was founded by a group of young Indian professionals who realized that an organized and networked ambulance service in India was necessary to help save the many lives that were being lost due to a lack of timely medical attention. The project has been set up in association with London Ambulance Service, a UK Government Agency, which has provided the processes, systems, protocols, training and project implementation assistance to 1298. Through the 1298 program, Ziqista operates a network of fully equipped Advanced and Basic Life-Support Ambulances across two states in India. 1298's business model uses a sliding price scale driven by a patient's ability to pay, which is determined by the kind of hospital to which patients choose to be taken. Financial sustainability is assured through cross-subsidization. Over the last three years, about 20% of patients utilizing this service were subsidised. The Dial 1298 for Ambulance service was launched in the state of Kerala on the 31st of December 2007. Initially implemented in 4 districts, the service was expanded to another 2 districts in July 2008. Although the service is currently available only in Mumbai and Kerala, state, investment discussions are under way to enable the company to expand into 8 new regions across India (baking its pay-per-use network in about 400 ambulances in the next few years). Dial 1298 for Ambulance has saved more than 70,000 lives in Mumbai. The service has grown from 10 ambulances in Q1 of 2007 to 60 ambulances as of 2008. DocTalk	DocTalk is a mobile app that allows users to stay in touch with doctors easily through an AI-based, on-demand virtual assistant. It works as a Dropbox and WhatsApp solution for the Indian healthcare ecosystem.  Patients can download the app and start uploading all their reports with no cost involved. Once patients upload reports, they can connect with their doctor. The platform also validates if the doctor is or not. This is essential as the focus isn't on discovery. If a patient's doctor is not affiliated with DocTAK, the patient gets automatically subscribed after the said doctor is onboarded.  DocTalk allows users to safely save all their medical files and history on the cloud so that they do not need to carry their files for a doctor's appointment. Using the app, patients can also chat with their doctors and get prescriptions on-the-go. The platform also services doctors by preventing revenue leakage, while also assisting them in maintaining relationships with patients.  Patients pay on a monthly basis to communicate with their doctor. DocTalk charges a part of this as its fee and the rest of the doctor's fee for consultations.	Healthcare	Telemedicine	2016	Hyderabad	29	<a href="http://doctalk.com/">http://doctalk.com/</a>
Eko health	Being an insider in the healthcare industry the founder through EkoHealth initiative helps patient save upto eighty percent of their expenditure on medicines and surgeries. LifeSpring Hospitals Pvt Ltd	Expanding opportunities for lower-income women to access affordable, high quality maternal care is at the heart of LifeSpring Hospitals. The cost of traditional private hospitals is out of reach of many Indians. Yet, public hospitals' free services often compromise quality, transparency, efficiency, and attitude towards the customers. Women are increasingly choosing to give birth at a private hospital, but often have to take out loans or sell assets to finance their choice of receiving adequate care. LifeSpring aims to serve as a model for providing high quality maternal and child health services to the poor in India and worldwide. LifeSpring's model uses a market-based approach to achieve sustainability and scale. It utilizes a cross-subsidy model of tiered pricing that enables LifeSpring to charge low prices for the general ward, which makes up 70% of each hospital. The first LifeSpring Hospital opened in 2006 on the outskirts of Hyderabad in Moula Ali. It broke even and became profitable in less than two years of operation. Through its process-driven model, each LifeSpring Hospital is easily replicable in other locations, ensuring scalability and supporting rapid expansion.	Healthcare	Maternity and child Care	2005	Hyderabad	2	<a href="http://www.livespring.in/">http://www.livespring.in/</a>
Manthara	Manthara is a AI-based platform which works with hospitals and healthcare centres to improve the speed and accuracy of blood reports. The solution for blood is called Shoni and retinal scan analysis solution is Drishá. Manthara is capable of analyzing blood, urine and semen samples and generating medical reports in less than 10 minutes. It takes in visual medical data, like blood sample images, and can classify various objects of interest from the image, detect diseases, if any, and compare the metrics for reports. Since it eliminates the need for labs to ship blood samples to different locations, it helps diagnostic chains save on logistical costs as well as time. It also allows labs and hospitals to scale by implementing a hub-and-spoke model where the medical experts can operate from hubs and devices can be installed in spokes. The platform also provides an interface for the medical experts to get feedback and annotations, which enables continuous learning with new and changing visual medical data.	Healthcare	Diagnosis	2013	Barnach	29	<a href="http://manthara.com/">http://manthara.com/</a>
mDHI	mDHI creates and distributes health, wellness, and lifestyle information for the Indian user via text messaging, web, and online video. Its services are used by over 1 million Indians every month and its healthcare solutions include: health insurance planning, diabetes, women's health, exercise, diet & nutrition. mDHI's partners include leading online companies, mobile carriers, and consumer goods companies that seek deeper engagement with digital audiences using a data driven approach.	Healthcare	Telemedicine	2009	Bangaluru	29	<a href="http://www.mdhi.com/">http://www.mdhi.com/</a>
mHealth ventures India	mHealth Ventures India Pvt. Ltd., a healthcare technology company, develops an application that connects doctors and patients in India. It offers MetaDoctor, a mobile application that provides virtual consultations between doctors and patients, and allows users to chat live and consult with a healthcare physician and get healthcare suggestions. The company's application allows doctors to suggest and patients to ask questions on nutrition topics, such as losing weight, pregnancy diet, lack of energy, muscle gain, belly fat loss, and pediatric diet topics; counseling topics, including relationships, work and family stress, addictions, depression, trouble sleeping, among others. Niram.ai	Niram.ai is a low-cost, non-touch, zero radiation solution to detect breast cancer at an early stage as compared to traditional methods. The software is integrated in a portable screening device that can be used by any clinician. It can be used for cancer diagnosis in hospitals, for preventive health checks, and also for large scale screenings in rural and semi-urban areas. Niram.ai solution uses a high-resolution thermal sensing device, and machine intelligence and analytics for analysing the thermal images with minimal human supervision. The solution helps in reliable, early and accurate breast cancer screening. It is faster than cancer detection at a fraction of the cost of mammography. While a digital mammography costs around \$54 (3,000 Rupees), a scan done by NIRM.AI costs around \$15 (1,000 Rupees). Free screenings are also offered at rural healthcare camps. Green Max Technology	The company manufactures a variety of solar products such as solar street lights, solar cooker and pumps. The solar dryer is the only product relevant to PHL management	Agriculture	Equipment supply	2009	Bhopal	20	<a href="http://www.greenmaxtechnology.com/about-us.html">http://www.greenmaxtechnology.com/about-us.html</a>
GRobotMax (Green Robot Machinery Private Limited)	The GRobotMax manufactures robots and use machine vision to mechanize farm tasks. It uses 3D vision technology and robotics. One of its robotic arms is currently used in agriculture for cotton picking. The computerized vision detects and locates the precise 3D coordinates of the bloomed cotton from the images of the cotton plant. Post that the arm uses vacuum technology for precision picking of cotton and avoids picking any other contaminant. Multiple of these robotic arms can be mounted on a semi-autonomous vehicle that moves over rows of cotton plant to harvest the complete cotton field. Human operators are needed to operate these robotic arms in the cotton field in a) guiding them between rows of cotton plant, b) unloading the picked cotton and c) moving the machine to move from one field to another and doing any maintenance tasks that may be required. NI Farms	NI Farms is a horticulture company focused on Pomegranates and Bananas.	Agriculture	Low cost agri products	2000	Mumbai	20	<a href="http://www.nifarms.com/">http://www.nifarms.com/</a>
Intelligent Cloud	Intelligent Cloud is an AI sowing app powered by Microsoft Cortana Intelligence Suite including machine learning and Power BI. The app sends sowing advisories to participating farmers on the optimal date to sow. It does not require farmers to install any sensors in their fields or incur any capital expenditure. Farmers just need a feature phone capable of receiving text messages. The information gathered from the field using satellite images and sensors on balloons is juxtaposed with historical weather and other agronomic data to generate customised data for a specific farmer on a specific crop. To determine the optimal sowing period, the Moisture Adequacy Index (MAI) is calculated. The advisories also contain the optimal sowing date, soil test based fertilizer application, farm yard manure application, seed treatment, optimum sowing depth, and more. A personalized village advisory dashboard provides important insights into soil health, recommended fertilizer, and seven-day weather forecasts. The solution also provides information on the likelihood of rain, outbreak of diseases or attack of pests and on soil health condition.
