The Poverty and Equity team of the World Bank launched the Listening-to-Tajikistan survey in 2015 to monitor the challenges faced by vulnerable households in the country. The survey instrument includes questions on a variety of themes, including income, employment, migration, wellbeing, and services. The sample includes 800 households which were drawn from a nationally representative face-to-face survey conducted in the spring of 2015. Participating households were initially interviewed in 10-day intervals, moving to two-week intervals following the sixth wave of data collection. Responses reported in this note are weighted for national representativeness and for non-response, and households that refused to participate (or otherwise drop out) were replaced with another household from the same primary sampling unit. The B40 and T60 classification for the L2T survey are defined with respect to the baseline round of the survey, and are not updated in each round.
