

Project Outline

- Duration: 2021 - 2026
- Sector: Water
- Name of Counterpart Institutions : MOPHRH, DNAAS. AIAS, SPI, DPOP
- Type of ODA : Technical Cooperation
- Total Cost : 900 million Japanese Yen
- Project Overview : Promote sustainable water supply system in Niassa Province, through reinforcing technical capacities of the counterparts

Development Issues / Background

- To provide safe water, it is crucial to reinforce the technical capacity of the relevant institutions while raising awareness of local population.
- Water supply rate in Niassa province (37%) was lower than national average (56%) according to DNAAS 2015
- Together with JICA's grant aid cooperation project "The Project for Construction of Rural Water Supply Facility in Niassa Province" from 2021-2023, this project aims at providing safe water to people in Niassa province.

Expected Impact on the Water Sector

- Improvement of technical capacities for planning and implementation of water supply service
- Water supply system to be constructed in Massangulo district and technical capacities on planning and monitoring of construction to be reinforced.
- Improvement of the use of water supply facilities to establish sustainable water service
- Awareness raised on promoting hygiene for local population in the project sites.
