

Project Outline

- Duration: 2023 - 2025
- Sector: Disaster Risk Reduction (DRR)
- Name of Counterpart Institutions: Counsellor Service of State Representative in Maputo City
- Type of ODA: Technical Cooperation
- Total Cost: To be planned
- Project Overview : Preparation of urban development and infrastructure plan reflecting DRR measures based on the Disaster Risks Reduction Plan on water related risks

Development Issues / Background

- Mozambique is exposed to extreme events related to climate, which includes floods, cyclones and droughts.
- The government elaborated the Master Plan for Disaster Risk Reduction (2017-2030) with the objective of reducing disaster risks, loss of lives and essential infrastructures.
- The preparation of a Disaster Risk Reduction Plan including an investment list and action plan to implement DRR measures can be a base for implementation of urban development and infrastructure investment, taking into account disaster risk reduction.

Expected Impact on the DRR Sector

- Water related hazard risk is identified through elaboration of Risk Map
- Necessary DRR measures, priority DRR measures, responsible institutions to bear the expenses are identified through the formulation of Integrated Water Related Disaster Risk Reduction Master Plan
- The plan of structure and non-structure Measures identified, will be formulated through a pilot project to introduce development regulations considering DRR for existing developed urban areas.
- Coordination among the relevant institutions to be reinforced.
