

Results of Evaluation/Summary and Discussed Points

1. By showing **technology breakdowns** for mitigation actions, NDC can be taken **in a wider scope**.
2. **Prioritized technologies** = more inclined with sectoral development needs/perspectives
⇒ **relatively easier for implementation with less barriers.**
3. **Early implementation** will bring more development benefits
4. **Many options** have shown **less barriers, yet they do not meet Viet Nam's mitigation target** amount sufficiently
→ need for actions to remove barriers
5. Barriers should be removed by
 - **Government's policy lead** that facilitates to introduce low carbon technologies (standards, regulations, procedures)
 - Emphasizing **benefits for market/private sector**
 - International cooperation, with **lessons learned by successful cases in other countries** (such as Thailand, Indonesia etc.)
