

THE PROJECT FOR IMPROVEMENT OF WATER SUPPLY SYSTEM OF JUBA IN SOUTH SUDAN

Project Profile

Duration: From Aug 2013 –
Budget: JPY 4,402 Million
Type: Grant Aid
Location: Juba, JubeK State
Partners: Ministry of Water Resources and
Irrigation, South Sudan Urban Water
Corporation (SSUWC)
SDGs: Goal 6 (Clean water & sanitation)

THE PROJECT FOR
THE IMPROVEMENT
WATER SUPPLY SYSTEM OF
JUBA IN SOUTH SUDAN

Completion image of water treatment plant

The Project aims to improve the capacity of the water supply system of Juba by constructing water intake facilities, a purification facility, a distribution reservoir, transmission pipelines, 120 public tap stands and eight water tanker filling stations. Due to the rapid increase of population in the capital city and the lack of adequate water supply facilities, people of Juba have limited access to safe and clean water which is causing water-borne diseases and economic burden. Upon completion of the Project, SSUWC will be able to provide clean and safe drinking water to over 400,000 people in Juba. JICA has also implemented technical cooperation projects to enhance the management capacity of SSUWC since 2010.

Installed water intake facility: Warren Truss Bridge

Construction of water treatment plant
