Hanoi – On 24 November 2009, at the office of Ministry of Industry and Trade (MOIT), Record of Discussions for the Technical Cooperation Project on Human Resource Development of Technicians at Hanoi University of Industry will be signed by JICA Vietnam Office, Hanoi University of Industry and representatives from Ministry of Industry and Trade and Ministry of Planning and Investment. After the signing ceremony, 3-year Project will start with the major purpose on HaUI’s capacity building in developing its education and training programs to meet the demand of the industrial sector in Vietnam through the establishment of strong linkage between the University and the industrial sector.

In the period 2000-2005, JICA supported Hanoi Industrial College (presently, HaUI) through the 5-year technical cooperation project on building capacity in vocational training. Through this Project, various kinds of equipment and teaching methodologies for vocational training have been provided to Hanoi Industrial College. As the results of the successful Project, Vietnam – Japan Center has been established to provide technical training in fields of welding, lathe, metal cutting, etc with high level of satisfaction of the labour users and the graduate technicians. This achievement has created good premise for HaUI to raise its status.

With over 110-year history of establishment and development, HaUI has been on the way of reaching the objective to become training, scientific research and technology transfer institution at international recognition by deploying various activities to raise its training quality. Being fully aware that education and training programs need to be developed to properly meet the demand of industrial sector and the graduate technicians, the University expects that, through the new JICA Technical Cooperation Project, technical transfer from Japanese side will be of great effect.

The Project on human resource development of technicians at Hanoi University of Industry also aims at developing the skill testing system taking into consideration ministerial policies and demands of the industrial sector as well as providing effective internship programs for students.
PRESS RELEASE

It is expected that the Project will make contribution on HaUI’s capacity building in particular and the Vietnamese technical and vocational education and training system in general in providing sufficient industrial human resources which can meet the demands of the industrial sector in Vietnam.
